30781 (KEK—84-12, pp 177-200) **Observation of ultra high energy cosmic rays($>=10^{10}$GeV).** Nagano, M. (Tokyo Univ., Tanashi, Japan. Inst. for Cosmic Ray Research). Sep 1984. NTIS (US Sales Only), PC A11/MF A01. File Number DE86780447. (CONF-8312132—).

From Workshop on grand unified theories and cosmology; Oho, Ibaraki, Japan (7 Dec 1983).

Recent measurements of energy spectrum, arrival directions and mass compositions of ultra high energy cosmic rays($>=10^{10}$ GeV) are summarized. The surface air shower array of area over 20 km^2 under construction in Akeno and a future plan for a huge array of over 250 km^2 are described.

30782 (KEK—84-12, pp 38-60) **Astrophysical constraints on the monopole abundance.** Fukugita, M. (Kyoto Univ., Japan. Research Inst. for Fundamental Physics). Sep 1984. NTIS (US Sales Only), PC A11/MF A01. File Number DE86780447. (CONF-8312132—).

From Workshop on grand unified theories and cosmology; Oho, Ibaraki, Japan (7 Dec 1983).

Astrophysical constraints on the monopole abundance are surveyed. Various constraints derived from the monopole catalysed proton decay are discussed in more detail.

30783 (LBL—21126) **Structure in the universe from massive neutrinos.** Klinkhamer, F.R. (Lawrence Berkeley Lab., CA (USA)). Jan 1986. Contract AC03-76SF00098. 20p. (CONF-860167—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009926.

From Recontres de Moriond workshop on massive neutrinos in particle physics and astrophysics; Tignes, Savoie, France (25 Jan 1986).

A neutrino with hypothetical mass of order 10 eV may have an important role in the formation of large-scale structure in the universe. 23 refs., 8 figs.

30784 (N—86-17239) **Star formation in the inner galaxy: a far-infrared and radio study of two H2 regions.** Lester, D.F.; Dinerstein, H.L.; Werner, M.W.; Harvey, P.M.; Evans, N.J.,II; Brown, R.L. (National Aeronautics and Space Administration, Moffett Field, CA (USA). Ames Research Center). Dec 1985. 40p. NTIS, PC A03/MF A01.

Far-infrared and radio continuum maps have been made of the central 6' of the inner-galaxy H II regions G30.8-0.0 (in the W43 complex) and G25.4-02., along with radio and molecular line measurements at selected positions. An effort is made to understand far infrared wavelingths allow the dust temperature structures and total far infrared fluxes to be determined. Comparison of the radio and infrared maps shows a close relationship between the ionized gas and the infrared-emitting material. There is evidence that parts of G30.8 are substantially affected by extinction, even at far-infrared wavelengths. For G25.4-0.2, the radio recombination line and CO line data permit resolution of the distance ambiguity for this source. The confusion in distance determination is found to result from an extraordinary near-superposition of two bright H II regions. Using revised distances of 4.3 kpc for G26.4SE and 12 kpc for G25.4NW, that the latter, which is apparently the fainter of the two sources, is actually the more luminous. Though it is not seen on the Palomar Sky Survey, G25.4SE is easily visible in the 9532A line of S III and is mapped in this line. The ratio of total luminosity to ionizing luminosity is very similar to that of H II regions in the solar circle. Assuming a coeval population of ionizing stars, a normal initial mass function is indicated.

30785 (N—86-17240) **Hydrodynamic models for novae with ejecta rich in oxygen, neon and magnesium.** Starrfield, S.; Sparks, W.M.; Truran, J.W. (Los Alamos National Lab., NM (USA)). 1985. 14p. (NASA-CR—176475). NTIS, PC A02/MF A01.

The characteristics of a new class of novae are identified and explained. This class consists of those objects that have been observed to eject material rich in oxygen, neon, magnesium, and aluminum at high velocities. We propose that for this class of novae the outburst is occurring not on a carbon-oxygen white dwarf but on an oxygen-neon-magnesium white dwarf which has evolved from a star which had a main sequence mass of approx. 8 solar masses to approx. 12 solar masses. An outburst was simulated by evolving 1.25 solar mass white dwarfs accreting hydrogen rich material at various rates. The effective enrichment of the envelope by ONeMg material from the core is simulated by enhancing oxygen in the accreted layers. The resulting evolutionary sequences can eject the entire accreted envelope plus core material at high velocities. They can also become super-Eddington at maximum bolometric luminosity. The expected frequency of such events (approx. 1/4) is in good agreement with the observed numbers of these novae.

30786 (N—86-17255) **Heavy ion compositional signature in ^{3}He-rich solar particle events.** Mason, G.M.; Reames, D.V.; Klecker, B.; Hovestadt, D.; Vonrosenvinge, T.T. (National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). Oct 1985. 53p. NTIS, PC A04/MF A01.

A survey of the approx. 1 MeV/nucleon heavy ion abundances in 66 He^3-rich solar particle events was performed using the Max-Planck-Institut/University of Maryland and Goddard Space Flight Center instruments on the ISEE-3 spacecraft. The observations were carried out in interplanetary space over the period 1978 October through 1982 June. Earlier observations were confirmed which show an enrichment of heavy ions in HE3-rich events, rela-

tive to the average solar energetic particle composition in large particle events. For the survey near 1.5 MeV/nucleon the enrichments compared to large solar particle events are approximately He4:C:O:Ne:Mg:Si:Fe = 0.44:0.66:1.:3.4:3.5:4.1:9.6. Surprising new results emerging from the present broad survey are that the heavy ion enrichment pattern is the same within a factor of approx. 2 for almost all cases, and the degree of heavy ion enrichment is uncorrelated with the He^3 enrichment. Overall, the features established appear to be best explained by an acceleration mechanism in which the He^3 enrichment process is not responsible for the heavy ion enrichment, but rather the heavy ion enrichment is a measure of the ambient coronal composition at the sites where the He^3-rich events occur.

30787 (NASA-CP—2376-VOL-1, pp vp) **Soft-spectrum gamma-ray bursts.** Laros, J.G.; Fenimore, E.E.; Fikani, M.M.; Klebesadel, R.W.; Kane, S.R. (California Univ., Berkeley). Aug 1985. NTIS, PC A18/MF A01.

In Ninteenth International Cosmic Ray Conference. OG seasions, volume 1.

A typical gamma ray burst (GRB), when observed over the approximately 30 keV to 1 MeV range, has a 1 to 10 s duration and a spectrum describable in terms of a several-hundred-keV exponential function. However, KONUS data indicate that some GRBs may belong to a separate class of short (approximately 0.1 s), soft (kT 50 keV) events. This result has been questioned because the KONUS experiments, with only 4 s spectral time resolution and a lack of information approximately 30 keV, are not particularly well suited for the detection and study of these bursts. The UC Berkely/Los Alamos Solar X-Ray Spectrometer/GRB experiment on the International Cometry Explorer (ICE), with nearly continuous coverage of approxiomately one-sixth of the sky down to 5 keV at 0.5 s resolution, is better designed for such a task. Using ICE data, it was confirmed that soft-spectrum events do indeed exist, apparently with properties that set them apart from the general GRB population. Results from the ICE experiment are presented.

30788 (RAL—85-083) **Excitation of the iron Kα feature in solar flares.** Emslie, A.G.; Phillips, K.J.H.; Dennis, B.R. (Rutherford Appleton Lab., Chilton (UK); National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). Sep 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701770.

The paper concerns two solar flare events observed with the Hard X-ray Burst Spectrometer and the Kα channel of the X-ray Polychromator Bent Crystal Sepctrometer on the solar Maximum Mission Satellite. The observed magnitude of the Kα enhancement above the fluorescent background at the time of the large X-ray bursts is compared with the predicted Kα flux. The results support a thick-target non-thermal interpretation of impulsive hard X-ray emission in solar flares.

30789 (RAL—85-084) **X-ray signature of solar coronal mass ejections.** Harrison, R.A.; Simnett, G.M.; Waggett, P.W.; Bentley, R.D.; Phillips, K.J.H.; Bruner, M.; Dryer, M. (Rutherford Appleton Lab., Chilton (UK); Lockheed Palo Alto Research Labs., CA (USA); National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.). Sep 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701771.

The coronal response to six solar X-ray flares has been investigated. At a time coincident with the projected onset of the white-light coronal mass ejection associated with each flare, there is a small discrete soft X-ray enhancement or soft X-ray precursors. Motions of hot X-ray emitting plasma are identified during the precursors, which may well be a signature of the mass ejection onsets. Further investigations have also revealed a second class of X-ray coronal transient, during the main phase of the flare. These appear to be associated with magnetic reconnection above post-flare loop systems.

30790 (RAL—85-086) **Extragalactic Infrared Astronomy.** Gondhalekar, P.M. (Rutherford Appleton Lab., Chilton (UK)). May 1985. 181p. (CONF-8505251—). NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774.

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper concerns the field of Extragalactic Infrared Astronomy, discussed at the Fourth RAL Workshop on Astronomy and Astrophysics. Fifteen papers were presented on infrared emission from extragalactic objects. Both ground-(and aircraft-) based and IRAS infrared data were reviewed. The topics covered star formation in galaxies, active galactic nuclei and cosmology.

30791 (RAL—85-086, pp 1-12) **On the origin of extragalactic infrared radiation.** Yorke, H.W.; Kollatschny, W. (University Observatory Goettingen, Germany, F.R.). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper concerns the infrared radiation flux of galaxies in terms of star formation processes and stellar evolution. Phase transitions in the interstellar medium are discussed, as well as stellar evolution and the time dependent appearance of a galaxy.

30792 (RAL—85-086, pp 13-20) **Starbursts in non-interacting galaxies.** Hawarden, T.G.; Mountain, C.M.; Wade, R.; Joseph, R.D.; Leggett, S.K. (Royal Observatory, Edinburgh, UK; Imperial Coll. of Science and Technology, London, UK. Blackett Lab.; Edinburgh Univ., UK. Dept. of Astronomy). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

Examination of IRAS results for a complete sample of nearby galaxies with $O <= T <= 6$ suggest that, in the absence of strong interactions, IR-luminous starbursts occur only in barred galaxies. This postulate, combined with variations in the supply of gas to the bar, can explain most of the observed IR properties of spirals. Some consequences of these suggestions are discussed.

30793 (RAL—85-086, pp 21-31) **Near infrared imaging of galaxies.** Stewart, J.M. (Royal Observatory, Edinburgh, UK). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper presents images of spiral galaxies in the near infrared. A discussion of the colour distribution of the images includes: the origin of colour variations, extinction properties of extragalactic dust, and distribution of interstellar medium. The results are compared with CO observations.

30794 (RAL—85-086, pp 32-51) **Infrared photometric properties of the average galaxy.** Fairclough, J.H. (Rutherford Appleton Lab., Chilton, UK). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper examines galaxies described in the Revised Shapley Ames catalogue and the IRAS Point Source Catalogue, to allow the criteria of the normal (and abnormal) infrared behaviour of a galaxy to be defined. Samples of the galaxies considered, and derived optical properties of these galaxies are described. Hubble type distributions; far infrared luminosities; far infrared colours; and optical-infrared properties; are all discussed.

30795 (RAL—85-086, pp 60-67) **Near infrared study of Virgo dwarf ellipticals.** Zinnecker, H.; Cannon, R.D. (Royal Observatory, Edinburgh, UK). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

A study is presented of dwarf elliptical galaxies in the Virgo Cluster, using an infrared telescope. JHK photometry of a sample of 11 dwarf ellipticals (d.e.) is reported, together with 5 giant ellipticals (g.e.). B surface photometry is available for most of the d.e. galaxies. The J-H vs H-K two colour diagrams suggest that the metallicity of the d.e. is intermediate between that of the central regions of g.e. and that of several metal poor globular clusters. Also

the diagrams indicate that the age of some of the d.e. could be as young as 2-5 Gyr.

30796 (RAL—85-086, pp 68-86) **Infrared observations of blue compact galaxies.** Gondhalekar, P.M. (Rutherford Appleton Lab., Chilton, UK). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

Near and far infrared observations of blue compact galaxies have been described. The near infrared colours and the infrared-to-radio energy distributions of these galaxies suggest that in some blue compact galaxies the population of low mass evolved stars is small and these galaxies may be young objects. There is good correlation between far infrared luminosity and colours, neutral hydrogen mass and radio emission of these galaxies. The temperature of dust in these galaxies is bimodal and the temperature of the cool component appears to increase as the galaxies get bluer. In addition, the dust mass of these galaxies is extremely low.

30797 (RAL—85-086, pp 87-102) **Infrared emission and extragalactic starbursts.** Telesco, C.M. (National Aeronautics and Space Administration, Huntsville, AL, USA. George C. Marshall Space Flight Center). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper examines the belief that recent star formation plays a significant role in determining many of the infrared properties of galaxies. Pertinent types of infrared observations and the infrared properties of starbursts are briefly summarized. Recently developed models which describe the evolution of starbursts are also considered.

30798 (RAL—85-086, pp 103-113) **Infrared maps of M81: an example of the IRAS Close Galaxy Programme.** Abolins, J.A. (Rutherford Appleton Lab., Chilton, UK). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The infrared maps from the IRAS pointed-mode Close Galaxy Programme provide an important new data base for the study of nearby galaxies. The aim and scope of the programme are described and, as an example of what potential users of the data can expect, maps of the M81 region are presented and briefly discussed. The data base is scheduled for release at the end of 1985.

30799 (RAL—85-086, pp 114-129) **Infrared emission from active nuclei.** Ward, M. (Cambridge Univ., UK. Inst. of Astronomy). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper reviews some recent ground-based infrared observations from 1 - 20 microns of two major classes of active nuclei: LINERs and Seyfert type 1's. In addition, some IRAS data on an X-ray selected sample of Seyfert 1's are presented. The origin of their near I.R. (1-3.5 micron) and mid-I.R. (10-20 micron) emission, and the characteristic shape of their 0.3 - 100 micron continua are all discussed.

30800 (RAL—85-086, pp 130-147) **Blazars, quasars and starbursts.** Robson, E.I. (Preston Polytechnic, UK. Div. of Physics and Astronomy). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper concentrates chiefly on the submillimetre observations of extragalactic objects, obtained (mainly) by the Preston/QMC/Oregon consortium. The spectral observations of blazars, quasars and starbursts are presented and discussed.

30801 (RAL—85-086, pp 148-158) **Infrared search for primeval galaxies.** Collins, C.A.; Joseph, R.D. (Imperial Coll. of Science and Technology, London, UK. Blackett Lab.). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper is concerned with searches for IR objects which may well be primeval galaxies. Expected parameters of a primeval galaxy; limits of previous searches; near IR search programme; and results (3 candidate objects were uncovered); are all discussed.

30802 (RAL—85-086, pp 159-170) **Sunyaev-Zeldovich effect at 1.15 mm wavelength.** Chase, S.T.; Joseph, R.D.; Robertson, N.A.; Ade, P.A.R. (Imperial Coll. of Science and Technology, London, UK. Blackett Lab.; Queen Mary Coll., London, UK. Dept. of Physics). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The Sunyaev-Zeldovich (S-Z) effect is a spectral distortion of the Cosmic Background Radiation, induced by inverse Compton scattering of the microwave photons by energetic electrons in hot astrophysical plasmas. The paper reports the first attempt to detect the S-Z effect at 1.15 mm wavelength, using bolometric detection techniques. A marginal detection of the effect in the distant cluster 0016+16 was found, but not in the cluster A478.

30803 (RAL—85-086, pp 171-173) **Models for IRAS galaxies.** Rowan-Robinson, M.; Crawford, J. (Queen Mary Coll., London, UK. Theoretical Astronomy Unit). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The authors have modelled IRAS 12-100μ observations of galaxies as a mixture of 3 components: a cool "disc" component, a warmer "starburst" component and a "Seyfert" component peaking at 25μ.

30804 (RAL—85-086, pp 174-181) **Cosmological results from IRAS.** Rowan-Robinson, M. (Queen Mary Coll., London, UK. Theoretical Astronomy Unit). May 1985. NTIS (US Sales Only), PC A09/MF A01. File Number DE86701774. (CONF-8505251—).

From 4. Rutherford Appleton Laboratory workshop on astronomy and astrophysics; Abingdon, UK (20 May 1985).

The paper describes how the IRAS survey data can be used to obtain some powerful cosmological results. Source counts in the polar caps; mapping the "local" gravitational field with IRAS; and far infrared cosmological background; are all discussed.

30805 (RRK—84-24) **On a quantized scalar field in the combined de Sitter-Nariai universe.** Nariai, Hidekazu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Sep 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701778.

As a sequel to the previous paper on quantizing a massive or massless scalar field in the de Sitter and Nariai universes, the scalar field in the combined de Sitter-Nariai universe (with a 6-dimensional metric) is canonically quantized. Various bi-scalar propagators are derived and, especially in the massless case, their structures are examined in comparison with those in the de Sitter universe.

30806 (UWThPh—85-19) **Stability of matter.** Thirring, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 20p. (In German). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701772.

Basing on quantum mechanics and the simple Hamiltonian consisting of kinetic energy and Coulomb potential, heuristic arguments and estimates are used to guess the essential stability properties of many-particle systems. In view of applications in astrophysics, gravitation as a second potential and thermodynamic arguments are added. The guesses thus obtained are confronted with known

exact results. The connection between the stabilities against explosion and against implosion, and thermodynamic stability is considered. In systems with a particle number larger than approx= 10^{54} (corresponding to the Jupiter mass) gravitational energy prevails over the electrostatic energy and determines the history of a star. Negative specific heat accompanies life and death of a star. Finally the role of stability and instability in the universe for life is outlined.

30807 **(UWThPh—85-27) Spin-3/2 fields on black hole spacetimes.** Aichelburg, P.C. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701773.

Results obtained for spin-3/2 perturbations on stationary black hole space-time are briefly summarized.

30808 **(DOE/NV/10282—5013) BUARO PSD vs height.** Lebeda, C.; Pongratz, M. (EG and G, Inc., Los Alamos, NM (USA). Los Alamos Operations). Sep 1985. Contract AC08-83NV10282. 64p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86009847.

BUARO is the code name of the shaped-charge, barium plasma injection experiment launched June 7, 1976, from the DOE's Hawaiian test facility at Kauai (22.06°N, 200.21°E). The experiment investigated plasma instabilities and striation phenomena first observed in a similar experiment, code-named LOXIA, conducted May 14, 1975. The BUARO rocket payload contained seven shaped charges. An attitude control system aligned the injection perpendicular to the geomagnetic field. Ground stations located at the DOE observatories atop Mt. Haleakala on Maui photographed optical emissions. The technical objectives were both scientific and engineering in nature: (1) to investigate the wave-particle plasma interactions from injection of a dense barium plasma perpendicular to the geomagnetic field; (2) investigate electron heating and the subsequent ambient excitations from such an injection; (3) investigate plasma striation mechanisms concurrently in both collisional and collisionless environments; and (4) evaluate the engineering design and performance of the sevenfold larger shaped-charge payload. 9 refs., 54 figs., 5 tabs.

30809 **(LA-UR—86-1011) Hostile energetic particle radiation environments in earth's outer magnetosphere.** Baker, D.N.; Belian, R.D.; Higbie, P.R.; Klebesadel, R.W.; Blake, J.B. (Los Alamos National Lab., NM (USA); Aerospace Corp., El Segundo, CA (USA). Space Sciences Lab.). 1986. Contract W-7405-ENG-36. 15p. (CONF-8606108—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86008752.

From AGARD symposium; Hague, Netherlands (2 Jun 1986).

Many spacecraft operational problems in Earth's outer magnetosphere appear to be due to intense, transient radiation phenomena. Three types of naturally-occurring, and highly variable, hostile particle radiation environments are encountered at, or near, the geostationary orbit: (1) High-energy protons due to solar flares; (2) Energetic ions and electrons produced by magnetospheric substorms; and (3) very high energy electrons of uncertain origin. Present particle sensor systems provide energetic particle detection and assessment capabilities during these kinds of high-energy radiation events. In this paper, particular emphasis is given to highly relativistic electrons (3 ~ 10 MeV). Electron fluxes and energy spectra are shown which were measured by two high-energy electron sensor systems at 6.6 R/sub E/ from 1979 through 1984. Large, persistent increases in this population were found to be relatively infrequent and sporadic in 1979-81 around solar maximum. During the approach to solar minimum (1981 to present) it is observed that the highly relativistic electrons occur with a regular 27-day periodicity, and are well associated with the re-established solar wind stream structures. Through a superposed epoch analysis technique we show that an energetic electron enhancement typically rises on a 2- to 3-day time scale and decays on 3- to 4-day time scale at essentially all energies above ~3 MeV. The present analysis suggests that the Jovian magnetosphere is a recurrent source of this significant electron population in the outer terrestrial magnetosphere and that these electrons have a very deleterious influence on spacecraft systems due to deep dielectric charging and low-dose susceptibility effects. 13 refs., 11 figs.

30810 **(UCRL—93549) Constructing a coherent long-term global total ozone climatology from the BUV, MFR, and SBUV/TOMS data sets.** Ellis, J.S.; Luther, F.M. (Lawrence Livermore National Lab., CA (USA)). Feb 1986. Contract W-7405-ENG-48. 11p. (CONF-8605102—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009722.

From 2. conference on satellite meteorology: remote sensing and applications; Williamsburg, PA, USA (12 May 1986).

The backscatter ultraviolet spectrometer (BUV) aboard the NIMBUS 4 satellite provided global ozone data until mid-1977. The Total Ozone Mapping Spectrometer (TOMS) and Solar Backscattered Ultraviolet (SBUV) instrument aboard the NIMBUS 7 satellite began providing global ozone in November 1978. The only satellite derived global total ozone data available between the termination of the BUV data and the startup of the SBUV/TOMS data is that from the Multichannel Filter Radiometer (MFR) instrument aboard the Defense Meteorological Satellite Program (DMSP) series of satellites. The MFR and the SBUV/TOMS data are compared during the data overlap period in order to determine how well the MFR data might be used to represent the SBUV/TOMS and BUV data during the data gap period. 5 refs., 3 figs., 3 tabs.

30811 **(CONF-860622—1) Resonantly enhanced third-harmonic generation and multiphoton ionization in cesium vapor.** Hamadani, S.M.; Stockdale, J.A.D.; Compton, R.N. (Laseronics, Inc., Los Angeles, CA (USA); Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86005384.

From OSA/IEEE conference on lasers and electro-optics (CLEO '86); San Francisco, CA, USA (9 Jun 1986).

Simultaneous third-harmonic generation and multiphoton ionization are investigated in cesium. Very large infrared to blue conversion efficiencies (~1%) are observed near the two-photon allowed 6D states and three-photon allowed 7P states. 1 ref., 3 figs.

30812 **(DOE/ER/13394—1) Studies of autoionizing states relevant to dielectronic recombination. Progress report, July 1, 1985-June 30, 1986.** Gallagher, T.F. (Virginia Univ., Charlottesville (USA). Dept. of Physics). 18 Apr 1986. Contract FG05-85ER13394. 18p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010285.

In CTR plasmas a major power loss is radiation from partially stripped impurity ions, and it increases with the reduction in the degree of ionization. Thus recombination processes are important, and for multielectron atoms, dielectronic recombination, which proceeds via autoionizing states, is particularly important. Unfortunately, we do not have complete confidence in our understanding of this process due to the lack of fundamental atomic data on highly excited autoionizing states. Here we outline the progress in a program to investigate the properties of autoioinizing states of alkaline earth atoms (mostly in Sr) by means of a multistep laser excitation technique. This approach allows us to study autoionizing states of arbitrary n and l in a controlled environment. Specifically, we are measuring autoionization rates of autoionizing states of alkaline earth atoms, and the energy and angular distributions of ejected electrons. These experiements will yield the basic atomic data required to make accurate calculations of dielectronic recombination rates. 19 refs., 4 figs.

30813 **(DOE/ER/13456—1) Production and destruction of metastable negative ions. Progress report, September 1, 1985-August 31, 1986.** Pegg, D.J. (Tennessee Univ., Knoxville (USA). Dept. of Physics). 1986. Contract FG05-85ER13456. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010284.

We have continued to investigate the structure of metastable negative ions using fast-beam autodetachment spectroscopy. The rather surprising discovery that the metastable negative ion dimer He_2^- could be produced in our apparatus caused us to concentrate for most of the grant period on determining its structure. This work led us, in turn, to make further survey measurements to see if we could produce and study the structure of other exotic metastable molecular negative ions such as OH^-, H_2O^-, NH_2^-, and NeH^- which are difficult to produce by other means. We failed to detect any production of H_2O^- or HeH^- ions but we did detect small amounts of OH^- and NH_2^- ions. Spectroscopic measurements on these low intensity beams did not produce any detectable discrete energy features. This result could mean that the ions are formed in stable states or, if they are metastable, the signal-to-noise ratio in our measurements was insufficient to exhibit structure in the spectra.

30814 **(LBL—21260) Proton and deuterium NMR experiments in zero field.** Millar, J.M. (Lawrence Berkeley Lab., CA (USA)). Feb 1986. Contract AC03-76SF00098. 291p. NTIS, PC A13/MF A01; 1; GPO Dep. File Number DE86009952.

High field solid-state NMR lineshapes suffer from inhomogeneous broadening since resonance frequencies are a function of molecular orientation. Time domain zero field NMR is a two-dimensional field-cycling technique which removes this broadening by probing the evolution of the spin system under zero applied field. The simplest version, the sudden transition experiment, induces zero field evolution by the sudden removal of the applied magnetic field. Theory and experimental results of this experiment and several variations using pulsed dc magnetic fuelds to initiate zero field evolution are presented. In particular, the pulsed indirect detection method allows detection of the zero field spectrum of one nuclear spin species via another (usually protons) by utilizing the level crossings which occur upon adiabatic demagnetization to zero field. Experimental examples of proton/deuteron systems are presented which demonstrate the method results in enhanced sensitivity relative to that obtained in sudden transition experiments performed directly on deuterium. High resolution ^3H NQR spectra of a series of benzoic acid derivatives are obtained using the sudden transition and indirect detection methods. Librational oscillations in the water molecules of barium chlorate monohydrate are studied using proton and deuterium ZF experiments. 177 refs., 88 figs., 2 tabs.

30815 **Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure.** Morris, D.E.; Woodruff, W.H. (Los Alamos National Lab., NM). *Journal of Physical Chemistry;* **89**: No. 26, 5795-5798(19 Dec 1985).

The time-dependent theory of resonance Raman scattering developed by Heller and co-workers is extended to a more general case which considers simultaneous occurrence of excited-state normal-coordinate displacements, force-constant changes, and Duschinsky rotation upon resonant electronic excitation. General expressions are developed for ground-state scattering intensities (fundamentals, overtones, and combinations) in terms of excited-state structural and force-field parameters. It is shown that all factors contributing to the intensities must be considered if accurate excited-state parameters are to be obtained from experimental data. In particular, additional terms which were not explicitly developed in the earlier treatments can dramatically influence the calculated overtone and combination intensities. The results are applied to the redetermination of the displacement of the Mo-Mo coordinate in the δ-δ^* excited state of quadruply bonded $Mo_2(O_2CR)_4$, and compared to an earlier determination which employed a simplified form of the theory. 14 references, 3 figures.

30816 **Exact eigenfunctions and eigenvalues of a two-dimensional rigid rotor obtained using Gaussian wave packet dynamics.** Reimers, J.R.; Heller, E.J. (California Univ., La Jolla; Washington Univ., Seattle). *Journal of Chemical Physics;* **83**: 511-515(Jul 1985).

Exact eigenfunctions for a two-dimensional rigid rotor are obtained using Gaussian wave packet dynamics. The wave functions are obtained by propagating, without approximation, an infinite set of Gaussian wave packets that collectively have the correct periodicity, being coherent states appropriate to this rotational problem. This result leads to a numerical method for the semiclassical calculation of rovibrational, molecular eigenstates. Also, a simple, almost classical, approximation to full wave packet dynamics is shown to give exact results: this leads to an a posteriori justification of the De Leon-Heller spectral quantization method. 27 references.

30817 **Exact thermal rotational spectrum of a two-dimensional rigid rotor obtained using Gaussian wave packet dynamics.** Reimers, J.R.; Heller, E.J. (California Univ., Ja Jolla; Washington Univ., Seattle). *Journal of Chemical Physics;* **83**: 516-520(Jul 1985).

The exact thermal rotational spectrum of a two-dimensional rigid rotor is obtained using Gaussian wave packet dynamics. The spectrum is obtained by propagating, without approximation, infinite sets of Gaussian wave packets. These sets are constructed so that collectively they have the correct periodicity, and indeed, are coherent states appropriate to this problem. Also, simple, almost classical, approximations to full wave packet dynamics are shown to give results which are either exact or very nearly exact. Advantages of the use of Gaussian wave packet dynamics over conventional linear response theory are discussed. 21 references.

30818 **S-wave threshold in electron attachment - observations and cross sections in CCl4 and SF6 at ultralow electron energies.** Chutjian, A.; Alajajian, S.H. (California Institute of Technology, Pasadena). *Physical Review [Section] A: General Physics;* **31**: 2885-2892(May 1985).

The threshold photoionization method was used to study low-energy electron attachment phenomena in and cross sections of CCl4 and SF6 compounds, which have applications in the design of gaseous dielectrics and diffuse discharge opening switches. Measurements were made at electron energies from below threshold to 140 meV at resolutions of 6 and 8 meV. A narrow resolution-limited structure was observed in electron attachment to CCl4 and SF6 at electron energies below 10 meV, which is attributed to the divergence of the attachment cross section in the limit epsilon, 1 approaches zero. The results are compared with experimental collisional-ionization results, electron-swarm unfolded cross sections, and earlier threshold photoionization data. 34 refs.

30819 **Reactive and inelastic energy transfer in $H+D_2$ collisions studied by single-collision CARS spectroscopy.** Valentini, J.J.; Gerrity, D.P. New York, NY; American Institute of Chemical Engineers (1985). 11p. (CONF-841121—). American Institute of Chemical Engineers, 345 East 47th Street, New York, NY 10017.

From AIChE annual meeting; San Francisco, CA, USA (25 Nov 1984).

Highly time-resolved ($\simeq$5ns) coherent anti-Stokes Raman scattering (CARS) spectroscopy obtains product Raman spectra after single collisions with D_2 of laser-photolytically-generated hydrogen atoms. Varying photolysis wavelength changes H-atom energies. HD and D_2 Raman spectra yield product quantum-state distributions, elucidating dynamics of reactive and inelastic energy transfer.

30820 **(IC—85/38) Roton-like excitation in superfluid helium-4.** Ahmad, M.; Tikoo, S.K. (International Centre for Theoretical Physics, Trieste (Italy); Kashmir Univ., Srinagar (India). Dept. of Physics). May 1985. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701779.

A second quantized technique is used to study the thermodynamic behaviour of roton-like excitations, in liquid helium-4. Temperature dependence and density dependence of the energy-gap needed for roton-like excitations are obtained from this model.

30821 (UCD—472-130, pp 106-115) **Slip correction measurements for aerosol particles of doublet and triangular triplet aggregates of spheres.** Allen, M.D.; Raabe, O.G. Nov 1985. NTIS, PC A07/MF A01. File Number DE86006840.

In [Radiobiology research.] Annual report, fiscal year 1984.

Slip correction measurements were made on six doublets and six triangular triplet aggregates of uniform plastic spheres in an improved Millikan apparatus. The results were compared with theoretical methods for correcting aggregates of uniform spheres for slip. Each calculated value of the slip correction factor, C(D/sub s/), was used to solve for the adjusted sphere factor (psi) in the Knudsen-Weber form of the slip correction equation where D/sub s/ = psiD[1] and D[1] is the sphere diameter. For doublets (n/sub p/ = 2) of 1.18-μm polystyrene latex spheres in parallel motion, the average value of psi was computed to be 1.384. For triangular triplets (n/sub p/ = 3) in parallel motion, the average value of psi was computed to be 1.453. Values of psi that were computed from the reported measurements of other investigators showed fair agreement with our results.

30823 **(DOE/ER/10690—6) Participation in the ARGUS experiment at the DORIS collider at DESY, Hamburg, Germany.** Darden, C. (South Carolina Univ., Columbia (USA). Dept. of Physics and Astronomy). 27 Mar 1986. Contract AS09-80ER10690. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009517.

Progress reported for 1985 includes publishing final results for investigation of F mesons. Particle decays were sought including a gamma line at 9.46 GeV. One such decay was Upsilon(1S)→γH°. A search for fractionally charged particles is reported. The muon pair branching ratio was determined for decays of the Upsilon(2S). Six anti-deuterons were seen in a data sample of over 720,000 electron-positron annihilation events. A clear D° signal was seen in the K^+K^- channel. Results were obtained for the radiative transitions from the Upsilon(2S) to the 1^3P states of the banti-b system. Fifteen events were also seen which were interpreted to be the color suppressed decay of a B meson to J/psi. A new upper limit was set for the mass of the tau neutrino. A CAMAC booster was used to reduce dead time in the experiment. New preamplifiers raised the vertex drift chambers enough above the electromagnetic noise of the storage ring that it was no longer a problem. The performance of the inner compensation coils, storage ring, and main drift chamber are reported, as well as the time of flight, shower, and muon counters. (LEW)

30824 **(DOE/ER/40085—10) K-meson production by nu/sub μ/-deuterium reactions near threshold: implications for nucleon-decay searches.** Mann, W.A.; Kafka, T.; Derrick, M.; Musgrave, B.; Ammar, R.; Day, D.; Gress, J. (Tufts Univ., Medford, MA (USA); Argonne National Lab., IL (USA); Kansas Univ., Lawrence (USA)). 1986. Contract AC02-83ER40085. 30p. (ANL-HEP-PR—86-04). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009946.

The extent to which atmospheric neutrino interactions can mimic nucleon decay into modes with a strange particle in the final state is evaluated using nu/sub μ/-deuterium interactions recorded by the 12-Foot Bubble Chamber at the ANL Zero Gradient Synchrotron. Event distributions representative of atmospheric neutrinos with 1 < E/sub nu/ < 5 GeV are studied. Such neutrino interactions in massive underground detectors will yield K° and K^+ mesons with respective rates of 1.5 +- 0.8 and 4.2 +- 2.3 per kiloton year. However, the neutrino-induced events have final-state invariant mass and net momentum which are distinctly different from the values that characterize nucleon decay. Consequently, at lifetime levels corresponding to ten kilton years of detector exposure, experimental searches capable of reconstructing these variables will not encounter substantial neutrino background for nucleon decay modes leading to K mesons in the final state. 24 refs, 4 figs.

30825 **(INIS-mf—10040) Inclusive production of strange particles in 360 GeV/c PP interactions.** Rodrigo Anoro, T. (Universidad Autonoma de Madrid (Spain). Facultad de Ciencias Fisicas). 1985. 324p. (In Spanish). NTIS (US Sales Only), PC A14/MF A01. File Number DE86701793.

Results on cross sections, longitudinal and transverse momentum distributions for ksub(s)sup(o), Λ and anti Λ production in 360 GeV/c PP interactions are presented as obtained from EHS equipped with the Rapid Cycling Bubble Chamber (RCBC). The Λ and anti Λ polarization are measured. The cross sections for the diffractive components are given using the recoil spectrum. The data are discussed with respect to charm production. The study on inclusive production of strange meson and baryon resonances is presented. Results are given on cross sections for K**(892), K*(892), Σ^+(1385) and Σ(1285). Longitudinal and transverse momentum distributions for K*(892) and Σ(1385) are presented as well as for their induced Ksup(o's) and Λsup('s). An estimation is given on the K*(1430) and Σ*(1915) productions.

30826 (KEK—83-12, pp 171-189) **Electron antineutrino mass from the β-decay of ^{3}H.** Fujioka, M. (Tohoku Univ., Sendai, Japan. Cyclotron and Radioisotope Center). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

Experimental results on the mass of electron antineutrino m anti vsub(e) from the β-decay of ^{3}H are briefly reviewed, and a project is described of obtaining m anti vsub(e) by the same method using the INS (Institute for Nuclear Study, University of Tokyo) iron-free $\pi\sqrt{2}$ β-ray spectrometer. The necessary statistics and the atomic effect on the ^{3}H β-decay are discussed.

30827 (KEK—83-12, pp 135-149) **Measurement of the mass of the electron neutrino using electron capture in ^{163}Ho.** Yasumi, Shinjiro. (National Lab. for High Energy Physics, Oho, Ibaraki, Japan). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

An experiment to determine the electron neutrino mass was done by using electron capture in Ho-163. Since the data on the Q-value and half-life of Ho-163, which are closely relevant to the neutrino mass measurement, were contradictory, attempt was made to estimate these two quantities from the intensity of M X-ray from Ho-163 and the total number of Ho-163 in the source. The Ho-163 nuclei were produced through the (p, 2n) reaction on Dy-164 by using an AVF cyclotron. The contaminant radioisotopes were completely removed by elaborate chemical separation processes. The total number of Ho-163 atoms was determined by using the PIXE method. The M-capture half-life of Ho-163 was determined from the M X-ray intensity, and was (4.5 +- 1.5) x 10^4y. This was in good agreement with CERN's value. By using this value, a useful relation between the Q-value of Ho-163 and the mass of the electron neutrino can be deduced. An upper limit of the mass of the electron neutrino was obtained as 1.25 keV from the Q-value measured by the CERN group.

30828 (KEK—83-12, pp 150-170) **Neutrino oscillation.** Nagashima, Y. (Osaka Univ., Japan). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

The neutrino oscillation by flavor mixing is discussed. The discussion is confined to the case of two neutrinos. Two distinct types of experiments exist. One is the so called appearance type, and the other is the disappearance or survival type. Three different regions of L (the distance which the neutrino travelled) are considered. They are the long wave or low mass limit, the optimum oscillation region and the short wave or large mass limit. At present, although there has been some indication of possible neutrino oscillation, subsequent experimental results at reactors and accelerators have not confirmed them. An experimental project is planned to look for the signature of neutrino capture by neutrons to measure the appearance reaction. The detector consists of liquid scintillators, proportional drift tubes (PDT) followed by a gamma catcher. Several other experiments are in progress in the world, and are summarized in this paper. As long as artificial neutrino beam is used, there is a natural boundary of L. Therefore, it is considered to use natural neutrino sources (for example, cosmic ray).

30829 (KEK—83-12, pp 51-64) **Monopole annihilations and the knee in cosmic ray data.** Rotelli, P. (National Lab. for High Energy Physics, Oho, Ibaraki, Japan). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

The hypothesis is made that the knee in the integrated primary cosmic ray spectrum is due to the nucleon(antinucleon) decay products of monopole-antimonopole annihilations. The rate of such annihilations is calculated and some speculations on the annihilation scenario are presented.

30830 (KEK—83-31, pp 1-13) **Physics with high energy accelerators in the future.** Shimizu, Y. (Tokyo Univ., Japan. Dept. of Physics). Mar 1984. NTIS (US Sales Only), PC A03/MF A01. File Number DE86780435. (CONF-8210346—).

From 1. TRISTAN phase II workshop; Oho, Ibaraki, Japan (12 Oct 1982).

Phenomena expected in the energy region of 10-100 TeV are discussed. The grand unified theory based on SU(5) is used as the standard model for the present discussion. Since no new particles appear in the energy region higher than 0.1 TeV, the only way to test the theory is to measure the magnitude and the variation of the coupling constants with a mass scale. Three of them αsub(S), αsub(L) and αsub(1) correspond to colar SU(3), strength, and SU(2)sub(L) x U(1) electro-weak interactions, respectively. The lowest order renormalization group equations for these are presented. Values of the constants can be evaluated. As the next example for the theory, the model based on the orthogonal group O(14) is considered. The advantage of this group over SU(5) is due to the fact that it predicts four generations in total. Each fermion is accompanied by its conjugate. Then, the model contains (8 x 4) x 2 = 64 fermions in total. The phenomenology of this model was examined. Though only 8 x 3 fermions are known, a very rich particle spectrum is expected. Values of the constants are obtained, and are different from those obtained from SU(5), since the number of fermions is doubled. To construct a model of composite quarks and leptons, it is, in general, needed to assume that the scale parameter is larger than 100 TeV to account for various experimental limits on the rare decays. Discussions on the magnitude of the parameter are presented.

A series of experiments are being performed at Kamioka Mine in search of anomalous cosmic ray particles such as GUT magnetic monopoles, heavy slow charged particles and relativistic fractionally charged leptons. We report on the results from or the status of: 1) Scintillator telescopes of 22 m^{2}Srsup()), 2) Scintillator telescope of 110 m^{2}Srsup(+)), 3) Plastic track detector CR39 of 2500m^2 Srsup(++)), 4) Protype study of a large area He drift chamber.

30836 (LAL—85-09) **Search of prompt electrons in the NA14 photoproduction experiment at the CERN.** de Bouard, G. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Mar 1985. 171p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE86751347.

The purpose of this thesis is to isolate a prompt electron signal from the data of the NA14 photoproduction experiment at CERN. For that aim, a fast data filtering program has been developed. In order to have a good understanding of the electrons behaviour in the electromagnetic calorimeter, electrons from photon conversion were selected. The observation of events with a reconstructed psi and the sharing between the different psi production mechanism leads to a clear excess of the inelastic process relative to a QCD theoretical expectation. The prompt electrons measurement method, when applied to events obtained from a π beam, does not give any evidence for a signal. With incident photons, a strong signal is seen which cannot been explained by the Bethe Heitler mechanism and psi production alone. This signal is stronger than the photon-gluon fusion model prediction.

30837 (LAL—85-27) **DM2 results on hadronic and radiactive J/psi decays.** Augustin, J.E.; Calcaterra, S.; Cosme, G. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Jul 1985. 95p. (CONF-850721—21). NTIS (US Sales Only), PC A05/MF A01. File Number DE86751355.

From International Europhysics conference on high energy physics; Bari, Italy (18 Jul 1985).

The p anti-p and Λ anti-Λ channels and their angular distributions have been studied and a measurement of the α values of the (1 + α cos²theta) parameterization is given. Results on purely hadronic decays J/psi → Vector + Tensor are discussed in different modes: phiπ⁺π where the S*(975) is observed, phiK⁺K and phiKsub(S)Ksub(S) which present clear f'(1525) signal and some evidence of theta(1700) production and ωπ⁺π including ωf and ωX where X is a broad enhancement around 500 MeV. Finally radiative decays have been extensively studied. All neutral final states provide a measurement of J/psi → γπ⁰ and J/psi → γf → γπ⁰π⁰ branching fractions. From the J/psi → γπ⁺π channel, branching ratios and resonance parameters are given for the f(1270), the theta(1700) and a bump observed around 2100 MeV. The f'(1525) and theta(1700) parameters are derived from the analysis of γK⁺K and γKsub(S)Ksub(S) decay modes. Branching ratios are given for J/psi → γiota, the iota being observed in Ksub(S)K⁺π⁺ and K⁺Kπ⁰ modes. The etasub(c) production is also studied in this last mode. A rhoγ signal is seen in the iota mass region. The ωω mass spectrum for γωω events, exhibits a large bump between 1700 and 1900 MeV/c² and a clear etasub(c) signal is present in J/psi → γphiphi. Branching ratios and spin-parity assignments are studied for both states. An analysis of the low-mass phiphi spectrum is also presented. 62 figs.; 23 refs.

30838 (LAL—85-32) New particle searches at e⁺e machines. Haissinski, J. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Sep 1985. 14p. (CONF-8506194—10). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751357.

From International symposium on multiparticle dynamics; Kiryat Anavim, Israel (9 Jun 1985).

Recent results on new particle searches with e⁺e colliding beam rings are reported. This brief review makes no attempt for comprehensiveness but some emphasis is put on the searches for new heavy leptons and for supersymmetric particles, and on the question of particle compositeness. 37 refs.; 15 figs.

30839 (LAL—85-34) DM2 results on J/psi decays. Jean Marie, B. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Sep 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751373.

The DM2 experiment has taken data in the energy range 1.3 to 2.3 GeV. The results presented are based on the analysis of the whole data. Only two main aspects of the J/psi physics is treated: purely hadronic decays (p anti-p, Λ anti-Λ, ωππ, PHIKK) and radiative decays (γiota, γf', γtheta). The normalization is done by measuring the decay J/psi → rhoπ and using an averaged branching fraction value of (1.42 +- .2)%. Furthermore the rhoπ events have been used to check the Monte Carlo simulation of the detector.

30840 (LAL—85-37) Selected results on J/psi hadronic decays from DM2 and Mark III. Augustin, J.E. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Sep 1985. 16p. (CONF-850785—10). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751356.

From 5. international conference on physics in collision; Autun, France (3 Jul 1985).

Results from the high statistics experiments Mark III and DM2 on J/psi hadronic decays are reviewed. Special interest is given to SU3 violating decays into two pseudoscalars and baryon-antibaryon, especially the first observation of J/psi → K⁰sub(S)K⁰sub(L). The complete measurement of the vector + pseudoscalar modes allows a new determination of the eta and eta' mixing parameters, indicating the presence of a new component in the eta' wave function. The iota(1440) and theta(1700) gluonium candidates have been searched for in hadronic decays, and the Mark III experiment observes a signal in J/psi → ω iota (or ωE).

30841 (LPNHEP-T—84-01) High accuracy measurement of the total cross section and of the real part of the scattering amplitude πip from 2 to 14 GeV/c. Lellouch, D. (Paris-6 Univ., 75 (France). Lab. de Physique Nucleaire et de Hautes Energies; Paris-6 Univ., 75 (France)). Nov 1984. 270p. (In French). NTIS (US Sales Only), PC A12/MF A01. File Number DE86751595.

This thesis presents the results of the experiment PS 157 which has been carried out at the CERN in 1980; the total cross section of π⁺p for 4000 values of energy was measured with an accuracy of 5%. The density of the measurements allows the exploration of a new region of the plane (width, elasticity) for narrow baryon resonances of which the mass is between 2 and 5,5 GeV/c². The total cross section of K⁻p has also been measured between 4,6 and 4,9 GeV/c for 80 momentum values; the measurement quality allows to exclude any narrow resonance of which the partial elastic width is below 10 kw/c² and to clarify the confused situation of the Δ resonances. The principles of the measurements are first given. The experimental results of the researches of narrow baryon resonances are presented; the main results of baryonium physics are recalled as also the most important theoretical models which are applied to mesobaryons. Then, one deals with the normalization process, the efficiency of the transmission detectors, and the determination of the total cross section. Finally, the total cross sections of π⁺p and π⁻p are compared, and one studies the forward elastic differential cross sections, to determinate on one side "the slope" of the nuclear differential cross section, and on the other side the real part of the scattering amplitude, by means of the measurement of the interference term between the Coulomb and nuclear amplitudes. 33 refs.

30842 (PCCF-T—84-03) Pion electroproduction at threshold in the inverse channel: πp → ne⁺e. Determination method of the longitudinal multipole Lsub(0+)sup(π) at small transfer. Preparation of the experiment. Fonvieille, H. (Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire; Clermont-Ferrand-2 Univ., 63 - Aubiere (France)). 1984. 145p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751348.

Our main is to give for the first time an experimental value of the longitudinal multipole Lsub(0+)sup(π) (k²) for small transfers in the time-like region (/k²/ < 0.5 fm²) by studying the process: πp → ne⁺e at threshold. The pion beam is stopped in a liquid hydrogen target, and the lepton pair is detected in a double arm high-resolution, large-acceptance spectrometer (magnet + drift chambers). We describe here the preparating phases of the experiment. After a brief review of the theoretical approaches, we discuss the method for selecting the events from the background (due to: πp → nγ, γ → e⁺e, and πp → π⁰n, π⁰ → γe⁺e) and present a method for analyzing our data, from which the multiple Lsub(0+)sup(π) (k²) is to be determined with an average 10% precision. For that purpose, we give an approximate calculation of the experimental resolution. The choice of the experimental set-up and its realization are then described. The experiment (a Clermont-LPC, Saclay-DPhN/HE, Lyon-IPN Collaboration) takes place on the ALS-pion Beam (Saclay). The whole experimental set-up has been recently checked satisfactorily.

30843 (RAL—85-076) Lifetime measurements of hadrons containing heavy quarks at PETRA and PEP. Forden, G.E. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 18p. (CONF-850768—6). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701792.

From SLAC summer institute on particle physics; Stanford, CA, USA (23 Jul 1985).

Recent lifetime measurements of heavy particles at PETRA and PEP are reviewed. A comparison of the methods used is given. The world averages for the lifetimes of the D⁰ and D⁺ mesons are found to be (tausub(D⁰))=3.97 +- 0.3 x 10⁻¹³ sec and (tausub(D+-))=8.0 +- 0.6 x 10⁻¹³ sec. This difference in lifetimes is discussed in light of recent information about exclusive decays. The world average for the lifetime of bottom hadrons is determined to be (tausub(b))=11.0 +- 1.5 x 10⁻¹³ sec and new estimates for the b quark mixing elements, chemical bondVsub(bu)chemical bond and chemical bondVsub(bc)chemical bond, are given.

30844 (RAL—85-091) Constant scattering length fits to low energy Kp interactions. Conboy, J.E. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701794.

The paper concerns the data on low energy Kp interactions analysed using the constant scattering length (C.S.L.) approximation. The scattering lengths are found to differ significantly from those required to fit data from previous K^1p experiments, and these differences are discussed. The data indicate an Tspin=1 P- wave interaction, from the production angle distributions of the K-bar°n, $\Sigma^+ \pi^+$ and $\Lambda\pi^0$ channels. However the authors have been unable to fit both the P-wave and K°sub(L)p data with the simple C.S.L. model.

30845 (SLAC-PUB—3845) Gluonium candidates from hadronic and e^+e^- interactions. Heusch, C.A. (California Univ., Santa Cruz (USA). Inst. for Particle Physics; Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Dec 1985. Contract AC03-76SF00515. 32p. (CONF-8503146—5; SCIPP—85/48). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009782.

From Topical seminar on few and many quark systems; San Miniato, Italy (25 Mar 1985).

The experimental approaches exploited in the search for gluonia that are deemed most promising are briefly described, both in hadron-hadron collisions and heavy quarkonium decay. The presently available evidence is summarized for those states that have been claimed as possible gluonia. Proceeding in the order of lowest-mass expectation, categorization is done only in terms of definitive (or putative) J/sup PC/ assignments. 51 refs., 16 figs., 3 tabs. (LEW)

30846 (SLAC-PUB—3904) ASP: a search for single photon events at PEP. Hollebeek, R. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Mar 1986. Contract AC03-76SF00515. 12p. (CONF-8505229—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009199.

From New particles conference; Madison, WI, USA (8 May 1985).

The ASP search for events with a single photon and no other observed particles is reviewed. New results on the number of neutrino generations and limits on selectron, photino, squark and gluino masses are presented.

30847 How to search for new particles at anti pp colliders. Barger, V. (Physics Dept., Univ. of Wisconsin, Madison, WI 53706). pp 375-394 of Antiproton 1984. Accord, MA; Adam Hilger Ltd. (1985). (CONF-840795—). Contract AC02-76ER00881.

From 7. European symposium on antiproton interactions; Durham, UK (9 Jul 1984).

Methods for identifying the T quark, a fourth generation of quarks and leptons, supersymmetrict partners of the known particles, and the Higgs boson at anti pp colliders are discussed. The properties of events with single leptons, multileptons, and missing P/sub t/ along with hadronic jets are studied. The techniques include lepton isolation, jet broadness, Jacobian Peaks, transverse masses and azimuthal correlations.

From Workshop on observable standard model physics at the SSC; Los Angeles, CA, USA (15 Jan 1986).

Events in high energy hadron collisions are discussed that contain a hard scattering, in the sense that very heavy quarks or high P/sub T/ jets are produced, yet are diffractive, in the sense that one of the incident hadrons is scattered with only a small energy loss. 12 refs., 6 figs.

30849 (CEA-CONF—8070) Particle physics and gauge theories. Morel, A. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). [1985]. 110p. (SPh-T—85-105). NTIS (US Sales Only), PC A06/MF A01. File Number DE86751364.

These notes are intended to help readers not familiar with particle physics in entering the domain of gauge field theory applied to the so-called standard model of strong and electroweak interactions. The introduction is considerably enlarged in order to give non specialists a general overview of present days "elementary" particle physics. The Glashow-Salam-Weinberg model is then treated, with the details which its unquestioned successes deserve, most probably for a long time. Finally SU(5) is presented as a prototype of these developments of particle physics which aim at a unification of all forces. Although its intrinsic theoretical difficulties and the non-observation of a sizable proton decay rate do not qualify this model as a realistic one, it has many of the properties expected from a "good" unified theory. In particular, it allows one to study interesting connections between particle physics and cosmology. 35 refs.

30850 (CERN-EP—86-27) Heavy flavour photoproduction and decay. Barate, R. (European Organization for Nuclear Research, Geneva (Switzerland)). 21 Feb 1986. 12p. (CONF-8509280—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE86901259.

From 2. Hellenic school on elementary particle physics; Corfu, Greece (1 Sep 1985).

Heavy flavour decays is the ideal place to measure weak couplings and mixing angles of heavy quarks; moreover, at these very short distances, the interplay between weak and strong interactions can be studied. Due to the unexpected experimental difference of lifetime between D^0 and D^+, the effect of the remaining light quark has also to be taken into account; the situation is evolving fast with measurements of new decay modes for charm and beauty. The production of heavy flavours by photons can be considered as a good test of a simple QCD process: the photon-gluon fusion, where the high mass of the produced quark allows perturbative calculations. It can be compared with the Vector Dominance Model (VDM) predictions. With inelastic psi photoproduction, second order QCD processes can be measured. These lectures were divided in four parts: charm decays, beauty decays, photoproduction mechanisms and experimental methods. 67 refs., 5 figs.

30851 (DOE/ER/04928—7) Partial wave analysis of π-N, NN, and KN scattering below 2 GeV. Progress report, June 1, 1979-May 31, 1980. Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1980. Contract AS05-76ER04928. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009806.

Activities are reported with respect to the Scattering Analyses Interactive Dial-in (SAID) Facility. The facility provides scattering analysis solutions for nucleon-nucleon scattering, pion-nucleon scattering, and kaon plus-nucleon scattering. Data base management, partial wave analysis, modeling, and calculation of reaction cross sections are reported for nucleon-nucleon elastic scattering. Analyses were performed for pion-nucleon elastic scattering from 0 to 350 MeV. Effort is reported in the development of a new parameterization for unusual resonances of kaon plus-nucleon elastic scattering. Pion-nucleon inelastic scattering, particularly that which produces a pion, is also being analyzed by partial-waves, the current effort being the single-energy analyses of the world data. A Center for Analyses of Particle Scattering is being organized. (LEW)

30852 **(DOE/ER/04928—8) Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1980-April 30, 1981.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1981. Contract AS05-76ER04928. 8p. NTIS, PC A02. File Number DE86009807.

Activities are reported with respect to the Scattering Analyses Interactive Dial-in (SAID) Facility, which provides scattering analyses solutions for nucleon-nucleon scattering, pion-nucleon scattering, and kaon plus-nucleon scattering. With respect to nucleon-nucleon elastic scattering partial wave analysis, progress is reported in the areas of data base management, analysis, modeling, and calculation of reaction cross sections. Pion-nucleon elastic scattering was also analyzed from 0 to 350 MeV. Work on kaon plus-nucleon scattering analyses is reported. Some work is also reported on pion-nucleon inelastic analysis, particularly in the determination of the π-δ-δ coupling constant. (LEW)

30853 **(DOE/ER/04928—10) Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1982-April 30, 1983.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1983. Contract AS05-76ER04928. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009805.

Progress and proposals for future work are given in the partial wave analysis of nucleon-nucleon elastic scattering, kaon plus-nucleon elastic scattering, and pion-nucleon elastic and inelastic scattering. Activities are also required with respect to the Scattering Analysis Interactive Dial-in (SAID) facility. (LEW)

30854 **(DOE/ER/04928—11) Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1983-April 30, 1984.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Aug 1984. Contract AS05-76ER04928. 4p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009812.

Progress and proposed future work are briefly described in the partial wave analysis of kaon plus-nucleon scattering and pion-nucleon elastic and inelastic scattering. Activities are also reported with respect to the Scattering Analysis Interactive Dial-in (SAID) system. (LEW)

30855 **(DOE/ER/04928—12) Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1984-April 30, 1985.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)). Aug 1985. Contract AS05-76ER04928. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009801.

Progress is reported in the partial wave analysis of nucleon-nucleon elastic scattering, pion-nucleon elastic scattering, and kaon plus-nucleon elastic scattering. Activities are also reported with respect to the Scattering Analysis Interactive Dial-in (SAID) facility. (LEW)

30856 **(DOE/ER/04928—13) Partial wave analyses of hadron scattering below 2 GeV. Progress report, May 1, 1985-April 30, 1986.** Arndt, R.A.; Roper, L.D. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Physics). Jan 1986. Contract AS05-76ER04928. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009800.

Progress is reported in the areas of nucleon-nucleon scattering partial wave analysis, pion-nucleon elastic scattering partial wave analysis, kaon plus-nucleon elastic scattering partial wave analysis, the Scattering Analysis Interactive Dial-in (SAID) Facility. (LEW)

30857 **(IC—84/247) Low-energy hadron physics in the virton quark model.** Dineykhan, M.; Dubnickova, A.Z.; Efimov, G.V.; Ivanov, M.A. (International Centre for Theoretical Physics, Trieste (Italy); Komenskeho Univ., Bratislava (Czechoslovakia); Joint Inst. for Nuclear Research, Dubna (USSR)). Dec 1984. 68p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86701787.

We propose a virton-quark model, which satisfies all axioms of relativistic quantum field theory and has no ultraviolet divergences. The model is based on the assumption that quarks do not exist (in general) as ordinary physical particles but only as virtual states, i.e. they represent some quasi-particles, which realize hadron interactions. Hadrons are bound states of quarks and are described by standard quantized fields. After introducing Lagrangians of hadron-quark interactions, some strong, electromagnetic and weak decays as well as low-energy scattering form factors of different types and static properties of hadrons are studied. In the model there are only two free parameters which define the quark propagators. A good description of the experimental data has been achieved.

30858 **(IC—85/34) Stability of SU(2) monopole in the presence of chiral fermions analysed on computers.** Bohr, H.; Khan, I. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701788.

Stability of SU(2) monopole in the presence of chiral fermions is investigated for a restricted class of variations using a hybrid analogue-digital computer.

30859 **(IC—85/42) Proton decay via d=5 gluino dressed graphs with flavour diagonal gluino couplings in supergravity models.** McDonald, J.; Vayonakis, C.E. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701783.

We calculate the proton decay rate for the mode p→K^+ ν-barsub(μ) in the minimal SU(3)xSU(2)xU(1) supergravity model, with flavour diagonal squark-quark-gluino couplings dressing d=5 operators. It is shown that, for reasonable ranges of parameters, the decay rate may be close to the present limits. This possibly requires that the vev's of the Higgs doublets be similar. Comparison with flavour changing couplings indicates that the diagonal case will be dominant, except if the third generation mixing angles are close to their upper bounds.

30860 **(IC—85/63) Charged-particle multiplicity distributions in e^+e annihilation and negative binomial distributions.** Chew, C.K.; Lim, Y.K. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701782.

A negative binomial distribution is shown to fit the available charged-particle multiplicity distributions of e^+e annihilation into hadrons excellently. A remarkably excellent agreement is also obtained between the theory and experiment in respect of the second, third, fourth and fifth scaled moments. Slow increase in violation of KNO scaling is seen as the energy increases at three different energies $\sqrt{s}$=14, 22 and 34 GeV.

30861 **(IC—85/66) Do superstrings lead to quarks or to preons.** Huebsch, T.; Hitoshi Nishino; Pati, J.C. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701789.

We propose that the fundamental four dimensional fields of the superstring theories be identified with preons. This can help preserve the most elegant features of the superstring theories while circumventing the possible difficulties such as rapid proton-decay, associated with a quark-lepton identification, of the fields. It is observed that a recently suggested preon-model possessing the desirable features of family-replication and inter-family mass-hierarchy can naturally emerge from the E_8xE_8 superstring theory.

30862 **(IC—85/75) On the hadron as a microuniverse.** Bernido, C.C. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701784.

A strongly curved microuniverse picture of a hadron is pursued. A gauge formulation of the microuniverse reveals the presence of instantons which are associated with a uniformly curved geometry. An investigation of the instanton coupling constant in relation with a hadronic matter shows that asymptotic freedom in a microuniverse picture of a hadron is possible in domains where quarks can be taken to be massless.

30863 (IFUSP-P—544) **Statistical principle and the quarks.** Cattani, M.S.D.; Fernandes, N.C. (Sao Paulo Univ. (Brazil). Inst. de Fisica). 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701790.

Fundamental considerations of indistinguishability in quantum mechanics lead to the possibility of existence of three kinds of particles (bosons, fermions and gentileons) in nature. This is expressed in terms of a Statistical Principle. Assuming that quarks are spin 1/2 gentileons it is seen that quantum chromodynamics can be used, with additional conditions, to estimate the properties of gentilionic hadrons.

30864 (INS—525) **Mass hierarchies of quarks and leptons in a supersymmetric SP(2N) subcolor theory.** Takeshita, Seiichiro; Yasue, Masaki. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Dec 1984. 43p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701791.

The problem of quark and lepton generations as well as quark and lepton mass hierarchies is studied in the framework of supersymmetric chiral subquark models. A confining force arises from an SP(2N) gauge theory, in which supersymmetry does not undergo dynamical breakdown. We show models with quasi Nambu-Goldstone fermions and massless composite fermions protected by chiral symmetries, some of which form generations of quarks and leptons that are expected to exhibit mass hierarchies.

30865 (IPNO-TH—85-07) **Non-leptonic hyperon decays in the chiral bag model.** Oteo, J.A.; Noguera, S. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Feb 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751598.

$\Delta S=1$ non-leptonic hyperon decay amplitudes are calculated within a recently developed scheme, whose theoretical support is the chiral bag model. This model is not only used to describe baryons, but also to incorporate the weak interactions via SU(2)sub(L) x U(1) local gauge invariance of its Lagrangian. Experimental amplitudes are well reproduced for a bag radius of approximately 65 fm.

30866 (KEK—83-12, pp 46-50) **Simple picture of Rubakov-Callan effects.** Kobayashi, Makoto. (National Lab. for High Energy Physics, Oho, Ibaraki, Japan). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

30867 (KEK—83-12, pp 1-45) **Introduction to monopole-fermion dynamics.** Kazama, Yoichi. (Kyoto Univ., Japan. Dept. of Physics). Jul 1983. NTIS (US Sales Only), PC A05/MF A01. File Number DE86780434. (CONF-8210345—).

From Workshop on monopoles and proton decay; Kamioka, Gifu, Japan (18 Oct 1982).

A rudimentary account of monopoles is given in this text, placing emphasis on their interaction with fermions. The discussion starts from an abelian monopole. The vector potential which characterizes the magnetic field does not really describe an isolated monopole, but rather a monopole with an infinitely long string of magnetic flux. Wu and Yang pointed out that the string can be removed. What makes the physics of the charge-monopole system extraordinary is the appearance of extra angular momentum. The angular eigenfunctions are different from the ordinary spherical harmonics. The coupling of the extra angular momentum to the spin of a charged Dirac particle leads to the helicity flip scattering for the state with the lowest total angular momentum. A dyonlike bound state is found. The topology of Dirac equation in the monopole field is introduced to understand the state with the lowest angular momentum. Brief description of the non-abelian monopoles are presented. A monopole in SU(5) grand unified theories a la Dokos and Tomaras, which is the simplest circumstance of the coupling of the monopole to a fermion multiplet is discussed. The discussion on the SU(2) doublet fermions in the presence of a monopole (dyon) is also presented.

From Recontres de Moriond workshop on massive neutrinos in particle physics and astrophysics; Tignes, Savoie, France (25 Jan 1986).

The concepts of Majorana and Dirac neutrinos are reviewed from an operational point of view and survey the experimental search for neutrino mass. Also reviewed are the work of Mikheyev and Smirnov on the enhancement of neutrino oscillations via the mechanism of Wolfenstein matter oscillations. Results of an extensive computation of MSW effects in the sun are described. 41 refs., 6 figs.

30873 (LAL—85-29) **Some aspects of the physics at LEP with the Delphi detector.** Roudeau, P. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Jul 1985. 80p. (CONF-8504213—1). NTIS (US Sales Only), PC A05/MF A01. File Number DE86751601.

From 12. international winter meeting on fundamental physics; Cuenca, Spain (22 Apr 1985).

After a brief presentation of the Delphi apparatus we consider the three great areas which are at the origin of the collaboration name: a Detector with, Lepton, Photon, Hadron, Identification. In each case we describe the concerned apparatus components and illustrate the interest of such measurements for some important physics channels.

30874 (LAL—85-35) **Measurement of the F_2sup(γ) photon structure function at LEP.** Cordier, A. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Sep 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751599.

Theoretical predictions on the F_2 structure function are actually rather controversial but agree on the necessity of high Q^2 measurements. LEP 1 and still more LEP 2 still provide the unique possibility of reaching high Q^2 and W^2 ranges, with good statistics,

allowing reliable QCD tests. From the experimental point of view, the F_2 measurement requires the definition of adapted triggers in the forward region of the detectors, which can be rather difficult due to the important "background" of the other $\gamma\gamma$ reactions.

30875 (RAL—85-077) Jet fragmentation. Saxon, D.H. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 47p. (CONF-850721—23). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701785.

From International Europhysics conference on high energy physics; Bari, Italy (18 Jul 1985).

The paper reviews studies on jet fragmentation. The subject is discussed under the topic headings: fragmentation models, charged particle multiplicity, bose-einstein correlations, identified hadrons in jets, heavy quark fragmentation, baryon production, gluon and quark jets compared, the string effect, and two successful models.

30876 (UWThPh—85-23) SVZ, gluon condensate and potential models. Bertlmann, R.A. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701786.

We review the attempts to represent the gluon condensate of Shifman, Vainshtein and Zakharov by a quark-antiquark potential.

30877 (UWThPh—85-24) Proton decay: theory versus experiment. Lucha, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1985. 48p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701781.

This review scrutinizes the present status of proton decay in grand unified theories. Baryon and lepton number violation in conventional as well as supersymmetric GUTs is discussed with special emphasis being laid on selection rules and model-independent predictions. The theoretical predictions for nucleon lifetimes and branching ratios, when confronted with experiment, inevitably lead to the conclusion that all great desert GUTs, like the minimal SU(5) model, are definitely ruled out by the experimental non-confirmation of proton decay at the expected rate.

30878 QCD prediction for charmonium production in anti pp collisions. Berger, E.L.; Damgaard, P.H.; Tsokos, K. (Argonne National Lab., Argonne, IL 60439). pp 349-354 of Antiproton 1984. Accord, MA; Adam Hilger Ltd. (1985). (CONF-840795—).

From 7. European symposium on antiproton interactions; Durham, UK (9 Jul 1984).

Within the framework of perturbative QCD, the formalism of exclusive processes is used to give predictions for the production cross section of charmonium resonances.

30879 (CEA-N—2428) About the obtention of static critical behaviours from the renormalization group techniques of field theory. Bervillier, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Mar 1985. 142p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751620.

These lecture notes on static critical phenomena try, as far as possible, to show the link between the physics of second order phase transitions and the techniques of renormalization within field theory. We especially insist on the relative influence of various parameters (cut-off and couplings) which characterize the real systems within a same class of universality defined by spatial dimension (d) and symmetry order (n). The techniques of calculations of the critical exponents are given in great detail (obtention of γ at order epsilon = 4-d for any n).

30880 (FNAL/Pub—86/38-A) Stable compactifications. Accetta, F.S.; Gleiser, M.; Holman, R.; Kolb, E.W. (Chicago Univ., IL (USA). Enrico Fermi Inst.; Fermi National Accelerator Lab., Batavia, IL (USA)). Mar 1986. Contract AC02-76CH03000. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009989.

We show that compactifications of theories with extra dimensions are unstable if due to monopole configurations of an antisymmetric tensor field balanced against one-loop Casimir corrections. In the case of ten dimensional supergravity, it is possible, at least for a portion of the phase space, to achieve a stable compactification without fine-tuning by including the contribution of fermionic condensates to the monopole configurations. 23 refs., 2 figs.

30881 (ICTP-IC—85/253) Critical dimensions for strings in a curved background. Bergshoeff, E.; Sarmadi, H.; Sezgin, E. (International Centre for Theoretical Physics, Trieste (Italy); International School of Advanced Studies, Trieste (Italy)). Nov 1985. 22p. (CONF-8506242—2). NTIS (US Sales Only), PC A02. File Number DE86901309.

From Cambridge workshop on supersymmetry and its applications; Cambridge, UK (23 Jun 1985).

The derivation is reviewed of the critical dimensions for bosonic/fermionic strings moving in d dimensional Minkowski spacetime times a group manifold. The mass spectrum is also discussed. 18 refs.

30882 (ICTP-IC—85/284) Superconformal invariance and the tensor multiplet in six dimensions. Bergshoeff, E. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1985. 7p. (CONF-8509284—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE86901302.

From 1. Torino meeting on superunification and extra dimensions; Torino, Italy (23 Sep 1985).

The complete structure of $N = 2$ conformal supergravity is presented in six dimensions. The relation with the graded algebra Osp(6,2/1) is discussed. It is shown that there exist two different formulations of $N = 2$, $d = 6$ conformal supergravity. These two formulations are shown to be equivalent by using some special properties of the $N = 2$, $d = 6$ tensor multiplet. 16 refs.

From 24. Cracow School of Theoretical Physics conference; Zakopane, Poland (1 Jun 1984).

Pure Yang-Mills theory is reformulated in terms of gauge-independent loop variables whose intrinsic redundancy is removed using a newly derived nonabelian generalization of the Poincare lemma.

30886 **(RAL—85-057) Constrained Lagrangian theory for monopoles.** Chan, H.M.; Tsou, S.T. (Rutherford Appleton Lab., Chilton (UK); Oxford Univ. (UK). Mathematical Inst.). Jul 1985. 22p. (CONF-8406328—2). Rutherford Appleton Laboratory, Chilton, Didcot, Oxon, OX11 OQX, England. File Number TI86901224.

From 24. Cracow School of Theoretical Physics conference; Zakopane, Poland (1 Jun 1984).

The equations of motion of a non-abelian monopole are derived from an action principle using the definition of its charge as a constraint. These equations are the analogues of the Lorentz and Maxwell equations for a point charge in an electromagnetic field. Their derivation makes use exclusively of the intrinsic topology and dispenses with the introduction of an interaction term in the action. The resulting equations bear a formal resemblance to the Wong equations governing the motion of a classical point source in a Yang-Mills field.

A large set of exact calculations of the scattering from a class of nonspherical particles known as Chebyshev particles' has been performed. Phase function and degree of polarization in random orientation, and parallel and perpendicular intensities in fixed orientations, are plotted for a variety of particles shapes and sizes. The intention is to furnish a data base against which both experimental data, and the predictions of approximate methods, can be tested. The calculations are performed with the widely-used Extended Boundary Condition Method. An extensive discussion of this method is given, including much material that is not easily available elsewhere (especially the analysis of its convergence properties). An extensive review is also given of all extant methods for nonspherical scattering calculations, as well as of the available pool of experimental data.

30892 **(CEA-CONF—8043) Pion photoproduction in nuclei.** Botton, N. de. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Jun 1985. 18p. (CONF-850634—3; DPh-N-S—2297). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751605.

From International school for intermediate energy nuclear physics; Veronna, Italy (20 Jun 1985).

Pion photoproduction experiments are discussed in connection with experimental techniques used for the photon source and the pion detection. After presenting the physical motivations and the theoretical frame of interpretation, on a few significant experiments displaying different aspects of the field are reported.

30893 **(INS—520) Nuclear collision theory with many-body correlations, 2. Deuteron+deuteron elastic scattering.** Kurihara, Yukio. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Dec 1984. 43p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701805.

A nuclear collision theory, in which the many-body correlation induced by the strong short-ranged repulsion and medium-ranged attraction of the realistic NN interaction is explicitly included, is applied to the deuteron+deuteron elastic scattering at low energies. Pair correlation functions calculated by the present theory are very different from the one of Hackenbroich et al. They contain not only the short-ranged suppressive correlation, but also the medium-ranged enhancing correlation. The former changes the shape of the d-d potential from the wine-bottle one, and the latter makes the d-d potential much more attractive. This effect is necessary for reproducing a bump around theta ub(cm)=90^0 in the experimental elastic differential cross section. The phase shifts evaluated by the present theory are compared with those from the resonating-group method.

30894 **(INS—522) Experiments using beams of unstable nuclear isotopes. Interaction cross sections and the radii of He isotopes.** Tanihata, Isao. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Dec 1984. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701808.

Secondary beams of ^{3}He, ^{4}He, ^{6}He, and ^{8}He were produced through the projectile fragmentation of 800MeV/nucleon ^{11}B primary. Interaction cross sections (σ sub(I) of all He isotopes on Be, C, and Al targets were measured by a transmission-type experiment. The interaction nuclear radii of He isotopes, R(He)=$\sqrt{\sigma}$ sub(I)/π-R(T) where R(T) is of the target nucleus, have been deduced from the present σ sub(I) and the known σ sub(I) of ^{4}He+^{4}He reactions.

30895 **(INS—526) Measurements of interaction cross sections and radii of He isotopes.** Tanihata, I.; Hamagaki, H.; Hashimoto, O. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). 17 Jan 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701807.

Secondary beams of ^{3}He, ^{4}He, ^{6}He, and ^{8}He were produced through the projectile fragmentation of 800MeV/nucleon ^{11}B primary. Interaction cross sections (σ sub(I)) of all He isotopes on Be, C, and Al targets were measured by a transmission-type experiment. The interaction radii of He isotopes, R(He)=$\sqrt{\sigma}$ sub(I)/π-R(T) where R(T) is of the target nucleus, have been deduced from the present σ sub(I) and the known σ sub(I) of ^{4}He+^{4}He and ^{12}C+^{12}C reactions; R(^{3}He)=1.59+-0.06, R(^{4}He)=1.40+-0.05, R(^{6}He)=2.21+-0.06, and R(^{8}He)=2.52 +- 0.06 in fm.

30896 **(DOE/ER/03244—121) Nonleptonic weak interactions in hypernuclei.** Barnes, P.D. (Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). 1985. Contract AC02-76ER03244. 24p. (CONF-850921—12). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009675.

From 5. international conference on hypernuclear and kaon physics; Upton, NY, USA (9 Sep 1985).

The nonmesonic reaction: $\Lambda N \rightarrow NN$ is discussed as an example of a nonleptonic weak process. Calculations of the reaction rate for this process have been reported using various effective weak Hamiltonians. These predictions are compared with the results of a new investigation of this interaction at the AGS in the context of weak hypernuclear decay. Measurements of hypernuclear lifetimes and neutron stimulated fractions for nonmesonic decay are reported for /sub Λ/^{12}C and /sub Λ/^{11}B. 21 refs., 15 figs., 5 tabs.

30897 **(IPNO-T—83-04) Study of some direct reactions at 0° in ^{18}O+^{26}Mg and ^{18}O+^{12}C systems.** Payet, J. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire; Paris-11 Univ., 91 - Orsay (France)). 1984. 130p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751619.

Direct transfer reactions induced by a ^{18}O beam on ^{12}C and ^{26}Mg targets, have been studied at the MP tandem (Orsay) with an experimental set up giving the possibility to have angular distributions up to 0°. Transfer reactions to discrete levels were analysed in the D.W.B.A. framework. This analysis confirms the interest as a spectroscopic tool of this 0° measurements. The (^{18}O, ^{18}O) and (^{18}O, ^{20}Ne) reactions were observed up to 40 MeV excitation energy. A diffractionnal model, including the one step direct transfer hypothesis, gives a qualitative agreement with the angular distributions and the energy spectra. A parametrization of a specific small angles development of the transfer amplitudes does not give good results with physical values for the parameters. 32 refs.

30898 **(ISN—85-05) Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon.** Kox, S. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires; Grenoble-1 Univ., 38 (France)). 1985. 133p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751616.

We have developed a new experimental set-up for the direct measurement of the total reaction cross sections (σsub(R)) using the beam attenuation method. Experiments have been performed in the energy range from 30 to 300 MeV/nucleon (MeV/n) using the recently delivered heavy ion beams of three accelerators (SARA, S.C. CERN and SATURNE). The experimental results are in strong disagreement with the predictions of the strong absorption models developed to reproduce the measured data at low energies. The decrease of σsub(R)) observed between 30 and 300 MeV/n clearly demonstrates the transparency effects in heavy ion collisions. The maximum of the transparency is observed around 300 MeV/n independently of the studied system. The different variations of σsub(R)) as a function of the incident energy and of the mass of the colliding systems are fairly well reproduced in the framework of a simple microscopic model. These results linked the transparency in the nucleus-nucleus collisions to the behaviour of the total cross sections for individual nucleon-nucleon (N-N) interactions. In this work it is also demonstrated the important role played by the mass asymmetry of the colliding system in the variations of σsub(R)). This latter effect has been explained with pure geometrical arguments. A new parametrization for σsub(R)) is proposed to reproduce the data measured over the energy range 30 to 2100 MeV/n. 99 refs.

30899 **(JAERI-M—84-163) Neutron nuclear data of ^{7}Ni adopted in JENDL-2.** Shibata, Keiichi. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Aug 1984. 39p. (INDC(JPN)—90/L; NEANDC(J)—104/U). NTIS (US Sales Only), PC A03/MF A01. File Number DE84901850.

Neutron nuclear data of ^{7}Li were evaluated for JENDL-2 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering, (n,γ), (n,n')αt reaction cross sections and the angular distributions of neutrons. The present evaluation was completely based on available experimental data. 30 refs.

30900 **(JAERI-M—84-165) Neutron nuclear data of ^{9}Be adopted in JENDL-2.** Shibata, Keiichi; Ioki, Kimihoro. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Sep 1984. 41p. (NEANDC(J)—105/U; INDC(JPN)—91/L). NTIS (US Sales Only), PC A03/MF A01. File Number DE84901864.

Neutron nuclear data of ^{9}Be were evaluated for JENDL-2 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic scattering, (n,2n), (n,γ), (n,p), (n,d), (n,t) and (n,α) reaction cross sections and the angular and energy distributions of emitted neutrons. The present evaluation was completely based on available experimental data. 40 refs.

30901 **(JAERI-M—84-198) Evaluation of neutron nuclear data of ^{6}Li for JENDL-3.** Shibata, Keiichi. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Nov 1984. 65p. (INDC(JPN)—94/GL; NEANDC(J)—108/AU). NTIS (US Sales Only), PC A04/MF A01. File Number DE85901060.

Neutron nuclear data of ^{6}Li have been evaluated for JENDL-3 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering, radiative capture, photon-production, (n,2n), (n,p) and (N,α) reaction cross sections and the angular and energy distributions of secondary neutrons. The total, elastic scattering and (n,α) cross sections below 1 MeV have been calculated on the basis of the R-matrix theory. Two discrete levels were taken into account for the inelastic scattering. The double-differential cross sections for the (N,2n) reaction and the inelastic scattering to the continuous levels were obtained from the phase-space model calculations. 45 refs.

30902 **(JAERI-M—84-204) Evaluation of neutron nuclear data of ^{7}Li for JENDL-3.** Shibata, Keiichi. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Nov 1984. 50p. (NEANDC(J)—109/U; INDC(JPN)—95/L). NTIS (US Sales Only), PC A03/MF A01. File Number DE85900705.

Neutron nuclear data of ^{7}Li have been evaluated for JENDL-3 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering, radiative capture, photon-production, (n,2n), (n,d) and (n,n')αt reaction cross sections and the angular and energy distributions of secondary enutrons. For the inelastic scattering two discrete levels were taken into consideration. The energy-angle distributions of neutrons from

the inelastic scattering to continuum and the (n,2n) reaction were calculated with the three-body phase-space model. 31 refs.

30903 **(JAERI-M—84-226) Evaluation of neutron nuclear data of ^{9}Be for JENDL-3.** Shibata, Keiichi. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Dec 1984. 83p. (INDC(JPN)—96/L; NEANDC(J)—110/U). NTIS (US Sales Only), PC A05/MF A01. File Number DE85901057.

Neutron nuclear data of ^{9}Be have been evaluated for JENDL-3 in the energy range from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering, photon-production, (n,γ), (n,p), (n,d), (n,t) and (n,α) reaction cross sections and the angular and energy distributions of neutrons. The total cross section below 830 keV was calculated with the R-matrix theory. The statistical model was applied to the prediction of the inelastic scattering and charged-particle emission cross sections. The (n,2n) reaction cross section is given by the sum of the inelastic scattering and (n,α_1) reaction cross sections. 38 refs.

30904 **0^- to 0^+ beta decay in A = 16.** Gagliardi, C.; Freedman, S.J.; Garvey, G.T.; Wrobel, J.R. (Physics Division, Argonne National Laboratory, Argonne, IL). pp 579-586 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

J = 0^- to 0^+ transitions have been and continue to be of great interest in nuclear physics. They are extremely restrictive as to the form of the one-body operator that can cause the transition. This point focussed attention on measuring both muon capture and beta decay rates between 0^+ and 0^- levels to determine the induced pseudoscalar coupling in nuclei. The interest in these transitions of late has been due to the large role expected for pion exchange currents. The capture has been well studied, but the beta decay of the 0^- level to ^{16}O in A = 16 has only been measured once and contains great error. The measurement is difficult owing to the small branching ratio for beta decay. This report by the authors on the ^{16}N(0^-)-0^+ decay provides an excellent example of how contemporary understanding of nuclear structure extended to include meson exchange currents allows prediction of sensitive axial vector decay rates. The experimental data shows good agreement with the calculated rates if these currents are included.

6514 Nuclear Properties And Reactions, A=20-38, Theoretical

30905 (CONF-8509176—, pp H19) **Excitation of the Δ resonance in relativistic heavy ion charge exchange reactions.** Bachelier, D.; Boyard, J.L.; Hennino, T.; Jourdain, J.C.; Roy-Stephan, M.; Contardo, D.; Descroix, E.; Grossiord, J.Y.; Guichard, A.; Haroutunian, R. (Institute de Physique Nucleaire, Orsay, France). Nov 1985. NTIS MF A01. File Number DE86004599.

From Workshop on intermediate energy heavy ion physics; Oak Ridge, TN, USA (23 Sep 1985).

It has been possible to observe, for the first time, the excitation of the Δ resonance in relativistic heavy ion charge exchange reactions. The two mirror reactions ^{27}Al (^{20}Ne,^{20}Na) and ^{27}Al (^{20}Ne,^{20}F) have been studied at 950 MeV per nucleon. These first measurements have been performed at Laboratorie National Saturne using the magnetic spectrometer SPES IV at 0°.

30906 **(INS—521) Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions.** Tanihata, Isao. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Dec 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701809.

Two-proton coincidence spectra have been measured in a wide kinematical range for ^{20}Ne+NaF and ^{20}Ne+Pb collisions at 400MeV/nucleon. Coplanar-type correlations show different feature between Ne+NaF and Ne+Pb target reactions. A strong in-plane correlation, which correspond to quasi-elastic scatterings (QES) of nucleons, was observed in wide angular range (15-90°) in NaF target collisions. Angular distributions of QES were reproduced reasonably well by a single nucleon-nucleon scattering model. Enhancement of the QES at momentum transfer around t=2-3m sub(π), which is predicted as an indication of pionic instability, was not observed. In Ne+Pb collisions, an azimuthally asymmetric emission of particles with respect to the beam axis were implied by the anti-coplanar correlation. A new type of coplanar correlation between the emission angle and the momentum suggests a back-to-back emission of projectile and target nucleons.

30907 (LBL—16870, pp 62-64) **Wide angle measurement of beta-delayed two-proton radioactivity of ^{22}Al.** Cable, M.D.; Honkanen, J.; Reiff, J.E.; Schloemer, E.C.; Zhou, S.H.; Zhou, Z.Y.; Cerny, J. (Univ. of Jyvaskyla, Finland). Aug 1984. NTIS, PC A16/MF A01. File Number DE85001035.

In Nuclear Science Division annual report, October 1, 1982-September 30, 1983.

With the discovery of beta-delayed two-proton radioactivity in ^{22}Al and ^{26}P, details of the mechanism of two-proton emission became of immediate interest. The original measurement of each isotope was made with a specially constructed particle telescope. This telescope was capable of observing proton-proton coincidences at relative angles of 0-70° (with varying efficiencies), and with a mean angle of ~ 40°. A second measurement at the widest practical angle was desirable in order to obtain more information on the angular correlation of the two protons. This measurement provides some information on the mechanism of two-proton emission. A two-proton summed energy spectrum from experiments at both wide and narrow angles for ^{22}Al is shown. It can be determined that the wide angle spectrum shows the kinematic shift expected for sequential decay; although this shows that sequential decay is indeed a major decay mode, the results do not eliminate the possibility that ^{2}He emission may also be present in the narrow angle data.

30908 **(IC—85/74) Alpha-clustering in 75 MeV ^{16}O+^{40}Ca as a collective mass fragmentation process.** Gupta, R.K.; Malhotra, N.; Saroha, D.R. (International Centre for Theoretical Physics, Trieste (Italy); Punjab Univ., Chandigarh (India). Dept. of Physics). Jul 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701803.

The observed α-cluster structure in the mass yield distribution of 75 MeV ^{16}O+^{40}Ca reaction is shown to be a collective mass transfer. This is given as a dynamical mass fragmentation process in the fusion-fusion of the compound nucleus ^{56}Ni. The experimental data is found to suggest the use of oscillating adiabatic cranking mass parameters. The coupling effect of relative motion to the mass asymmetry co-ordinate is also studied, which is found to be negligibly small.

6516 Nuclear Properties And Reactions, A=59-89, Theoretical

30909 **(CSNSM-T—84-01) Study of transitional Erbium nuclei (N=86) at very high spin. Highlight of dipolar transitions and medium lifetimes in the continuum.** Bogaert, G. (Paris-11 Univ., 91 - Orsay (France). Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse). 1984. 116p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE86751615.

Average lifetimes and multipolarities of unresolved transitions deexciting very high spin states of the light Rare Earth nuclei (N approximately 86) have been determined by a measure of Doppler shift attenuation and their anisotropy. The spin selection is provided by the total energy spectrometer technique; great care was taken of the existence of many long lived isomeric states in the studied nuclei. The N approximately 86 nuclei have been formed in the ^{84}Kr(340 MeV) + ^{74}Ge → ^{158}Er* reactions using the ^{84}Kr beam of the Orsay ALICE facilities and targets of ^{74}Ge built at the PARIS Isotope separator of the CSNSM. NaI γ spectra have been thoroughly cleared of the discrete lines contribution through a

careful subtraction procedure synthetising NaI spectra from the Ge ones. At very high spin the continuum γ rays feed two well separated bumps with Esub(γ) approximately .65 MeV and Esub(γ) approximately 1.3 MeV. The 1.3 MeV transitions appear at I > 30 h and their energy does not vary with the increasing spin like expected in the rotational case of the well deformed nuclei; they are strongly collectively enhanced with B(E2) > 130 W.u. Below 1 MeV the anisotropy of transitions is R approximately 0.7, indicating their stretched dipole nature. Recent calculations of nuclear shape deformation (following Strutinsky shell correction method) reproduce the two bumps shape of the experimental spectra and the origin of the excitation is explained in terms of nuclear vibration (γ-vibration, wobbling motion).

6517 Nuclear Properties And Reactions, A=90-149, Theoretical

30910 (ANU-P—927) Determination of B(E3;0_1i → 3_1) values for the stable isotopes of cadmium. Fewell, M.P.; Spear, R.H.; Adam, G.K.; Esat, M.T. (Australian National Univ., Canberra. Dept. of Nuclear Physics). May 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701810.

Values of B(E3;0_1^+ → 3_1) for the stable isotopes of Cd have been determined from particle spectra obtained using Coulomb excitation by ^{16}O projectiles. The results are: 0.16+-0.04 e^2b^3 (^{106}Cd), 0.0150+-0.010 e^2b^3 (^{108}Cd), 0.115+-0.013 e^2b^3 (^{110}Cd), 0.114+-0.009 e^2b^3 (^{112}Cd), 0.131+-0.015 e^2b^3 (^{114}Cd), and 0.100+-0.011 e^2b^3 (^{116}Cd). The corresponding E3 strengths are 34, 31, 23, 22, 24 and 18 single particle units, respectively. Examination of these and other data reveals no evidence for Shell effects in B(E3;0_1^+ → 3_1) values near the Z=50 proton shell, in contrast to the situation for B(E2;0_1^+ → 2_1^+) values.

30911 (IPNO-DRE—85-11) Gamma-decay of the 1gsub(9/2) and 2p inner-hole states in ^{111}Sn via the ^{113}Sn(^{3}He) reaction at 32 MeV. Azaiez, F.; Fortier, S.; Gales, S.; Hourani, E.; Maison, J.M.; Schapira, J.P.; Kumpulainen, J. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1985. 57p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751617.

The gamma-decay of the deeply-bound hole states in ^{111}Sn has been investigated at 32 MeV incident energy by means of the ^{113}Sn(^{3}He,αγ) reaction. The α-particles emitted near 0° were detected in a Si counter located at the image plan of the superconducting solenoidal spectrometer SOLENO. The γ-rays in coincidence with the α-particles were detected by two Ge(Li) detectors located at 90° and 142° with respect to the beam direction, respectively. Energies, spins and decay schemes have been established for the low-lying states up to 2.5 MeV excitation energy in ^{111}Sn. The γ-decay of the broad bump, located around 4.2 MeV and previously attributed to neutron pick-up from the inner 1gsub(9/2), 2psub(1/2) and 2psub(3/2) neutron subshells, reveals the importance of quasiparticle-phonons mixing in the spreading mechanism of the inner-hole strengths. The 1gsub(9/2) and 2p strength functions have been deduced from the γ-decay of the enhanced structures (3 <= Esub(x) <= 8 MeV). They are compared to the ones measured in previous inclusive neutron pick-up experiments and to those calculated in the framework of the quasiparticle-phonons nuclear model.

30912 (ISN—83-36) X detection in heavy ion induced reactions. Application to the lifetime measurement of a compound nucleus. Liatard, E. (Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires; Grenoble-1 Univ., 38 (France)). 1984. 116p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE86751614.

The ionization of inner electronic shells can be used to determine the lifetime of a compound nucleus formed in a nuclear reaction. The principle of the measure is based on the comparison between the unknown lifetime of the nuclear process and the known lifetime of a K-shell vacancy created during the collision. Besides testing this method, which we call the "atomic-clok" method with the compound nucleus ^{112}Te formed by the reaction ^{20}Ne (205 MeV) + ^{92}Mo, the work in this thesis basically consists of a description and a study of the problems presented by the use of X-ray spectroscopy in nuclear-decay-time measurements and Z-identification of heavy nuclear products.

30913 (JAERI-M—84-117) Attempt for revision of JNDC FP Decay Data File. Katakura, Jun-ichi; Akiyama, Masatsugu; Yoshida, Tadashi; Matumoto, Zyun-itiro; Nakasima, Ryuzo. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Japanese Nuclear Data Committee). Jun 1984. 47p. (NEANDC(G)—103/U; INDC(JPN)—89/L). NTIS (US Sales Only), PC A03/MF A01. File Number DE84901729.

Some improvement of JNDC FP Decay Data File is tried by reexamining the decay scheme for several nuclides, since slight discrepancies are seen in detailed comparison of decay powers. As a result, it is found that the average beta- and gamma-energies should be modified for ^{88}Rb and ^{143}La among the nuclides reexamined in the present study. The JNDC file modified in ^{88}Rb and ^{143}La gives better agreement in most cases with experiments than the original JNDC file for cooling times longer than a few thousands seconds. Howver, the discrepancy for cooling times from a few hundreds to about 1500 seconds still remains. 10 refs., 27 figs.

6518 Nuclear Properties And Reactions, A=150-189, Theoretical

30914 (ANU-P—910) Angular momentum partition in heavy ion induced fission and the effects of shells on gamma-ray multiplicities. Leigh, J.R.; Phillips, W.R.; Newton, J.O.; Foote, G.S.; Hinde, D.J.; Dracoulis, G.D. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jun 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701811.

Gamma-ray multiplicities have been measured following fission of nuclei with a wide range of mass and angular momentum. The average multiplicity reflects the total angular momentum of the fragments, but the observed variation of multiplicity with fragment mass asymmetry is dominated by shell effects. The highest average multiplicity arises from fission of the heaviest compound system, produced with the lowest angular momentum. This behaviour is well described by spin enhancement through statistical excitation.

30915 (ANU-P—918) Electron capture decay of ^{159}Tb. Dincklage, R.D. von; Hay, H.J. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jul 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701812.

Using a chemically and mass separated source of ^{159}Tb the decay to the 1187 KeV level in ^{159}Gd has been studied. The fraction of captures of electrons from the K-orbital was measured to be smaller than 5.2 x 10^8 and from the L-orbital to be 0.689 +- 0.010. Both observations are consistent with a ^{159}Tb - ^{159}Gd mass difference of 1222 +- 3 keV, thus rejecting a recent claim for a larger value.

30916 (ANU-P—925) Spectroscopy of ^{160}W and ^{167}W and alignment effects in very neutron-deficient tungsten nuclei. Gerl, J.; Dracoulis, G.D.; Byrne, A.P.; Poletti, A.R.; Poletti, S.J.; Stuchbery, A.E. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jun 1985. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701813.

High spin states in ^{160}W and ^{167}W were populated by the reactions ^{142}Nd (^{28}Si, 4n) ^{160}W, ^{142}Nd (^{28}Si, 3n) ^{167}W and ^{147}Sm (^{24}Mg, 4n) ^{167}W. From the gamma-decay of the yrast band and a side band (with assumed negative parity) were identified to high spins. There is evidence for a second side band in ^{167}W. The observed backbend of the yrast sequences and band crossing anomalies in the sidebands are discussed in conjuction with cranked-shell-model calculations. A systematic comparison is made between the yrast bands of ^{160}W, ^{167}W, ^{168}W in order to understand the structure of the second backbend in ^{160}W.

30917 (ANU-P—928) On the electron capture decay energies of ^{153}Gd and ^{175}Hf. Dincklage, R.-D. von. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jul 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701814.

The electron capture Q-values of ^{153}Gd and ^{175}Hf are analyzed using properties of their beta decays to different levels belonging to the same rotational family in the daughter atoms. The results are Q=500+-sub(50)sup(100)keV for ^{153}Gd, and Q=700+-sub(50)sup(100)keV for ^{175}Hf. They agree with data from nuclear reactions but reject smaller values based on K capture probabilities.

30918 (IC—85/36) Microscopic study of the S band in the generator co-ordinate approach. Wuest, E.; Ansari, A. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701800.

Using particle number and spin projected cranked Hartree-Fock-Bogolubov (CHFB) wave functions in the generator co-ordinate method (GCM) with the cranking frequency as a GC the shortcomings of the usual CHFB theory are removed and the ground as well as the s band are studied simultaneously. In particular, low-spin properties of the s band are discussed for a backbending nucleus ^{158}Dy.

6519 Nuclear Properties And Reactions, A=190-219, Theoretical

30919 (ANU-P—907) Quadrupole moment of ^{196}Pt - a crucial test of nuclear models. Fewell, M.P.; Gyapong, G.J.; Spear, R.H.; Esat, M.T.; Baxter, A.M.; Burnett, S.M. (Australian National Univ., Canberra. Dept. of Nuclear Physics). May 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701815.

The static electric quadrupole moment Q_2^+ and the $B(E2;0^+ \rightarrow 2^+)$ of the first excited state of ^{196}Pt have been determined using Coulomb excitation. The results are $Q_2^+ = 0.79 +- 0.12$ eb and $B(E2;0^+ \rightarrow 2^+) = 1.382 +- 0.006$ e^2b^2. The Bohr-Mottelson model and the 0(6) limit of the interacting boson model fail to reproduce these values when constrained to fit other known properties of ^{196}Pt.

30920 (ANU-P—923) Short lived isomers in ^{211}Rn and ^{210}Rn. Poletti, A.R.; Dracoulis, G.D.; Poletti, S.J.; Byrne, A.P.; Stuchbery, A.E.; Gerl, J. (Australian National Univ., Canberra. Dept. of Nuclear Physics). May 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701816.

Mean lives of excited states in ^{211}Rn and ^{210}Rn have been measured. For ^{211}Rn: 8169 keV (tau=3.3(3)ns), 7400 keV (2.1(5)ns), 6101 keV (41(2)ns), 5247 keV (5(2)ns), 3244 keV (3.9(8)ns), 2651 keV (9.6(4)ns). For ^{210}Rn: 8555 keV (2.6(3)ns), 4994 keV (19(1)ns), 1665 keV (15.0(15) ns). Some theoretical implications of these measurements for the structure of ^{211}Rn and ^{210}Rn are discussed.

30921 (ANU-P—931) G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn. Poletti, S.J.; Dracoulis, G.D.; Poletti, A.R.; Byrne, A.P.; Stuchbery, A.E.; Gerl, J. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Aug 1985. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701817.

The g-factors of isomeric states in ^{210}Rn have been measured using the TDPAD technique. Semi-empirical shell model calculations, with explicit inclusion of the couplings to the 3 octupole vibration, are carried out for the core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn. The resulting mixed multi-particle configurations are used to explain simultaneously the g-factors and enhanced E3 transitions which connect several pairs of these states.

30922 (ANU-P—933) Spectroscopy of high spin states in sup(211,212,213)Fr. Byrne, A.P.; Dracoulis, G.D.; Fahlander, C.; Hubel, H.; Poletti, A.R.; Stuchbery, A.E.; Gerl, J.; Davie, R.F.; Poletti, S.J. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Aug 1985. 88p. NTIS (US Sales Only), PC A05/MF A01. File Number DE86701818.

The level structures of ^{211}Fr, ^{212}Fr and ^{213}Fr have been observed to high spins, approx. $28(\hbar/2\pi)$ (and excitation energies approx. 8 MeV) using a variety of gamma-ray spectroscopic techniques. The structure of these nuclides is discussed in terms of couplings of single particle states through empirical shell model calculations. Good agreement with experiment is obtained. In ^{212}Fr and ^{213}Fr core-excited configurations are required to explain the properties of the highest states. A number of long lived states were observed in each nucleus some of which decay by by enhanced E3 transitions. The E3 transition strengths are discussed.

30923 Spin excitations in ^{208}Pb. Wambach, J.; Fiebig, R. (Department of Physics, State University of New York at Stony Brook, Stony Brook, NY). pp 475-494 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

The present paper considers various aspects of the response of ^{208}Pb to spin perturbations. The excitation of the Gamow-Teller and various transverse magnetic states are discussed, based on a boson exchange picture for the spin channel of the particle-hole interaction. The role of the tensor force in isoscalar spin states is investigated. The dynamics of the coupling of 1p-1h degrees of freedom to multiparticle-multihole channels is analyzed in a 2p-2h doorway state model. Energy weighted sum rules are derived for spin operators in the long wavelength limit based on the quark model.

30924 (CEA-CONF—8033) Quasi-particle excitations in low energy fission. Ashgar, M.; Djebara, M.; Bocquet, J.P.; Brissot, R.; Maurel, M.; Nifenecker, H.; Ristori, C. (CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)). May 1985. 4p. (CONF-850507—59). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751603.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Proton odd-even effect for ^{230}Th(nsub(th),f) and ^{232}U(nsub(th),f) has been determined with a ΔE-Esub(R) gas telescope. These data indicate that the qp-particle excitation probability at the saddle point is small and most of its results, when the nucleus moves from saddle to scission and the neck ruptures into final fragments. These results are discussed in terms of the different ideas and models.

30925 (CEA-CONF—8034) Post-neutron mass distribution for ^{232}U(nsub(th),f). Haddad, M.; Asghar, M.; Crancon, J.; Hamelin, C.; Lhospice, G.; Blachot, J. (CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)). May 1985. 4p. (CONF-850507—58). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751602.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The post-neutron absolute mass yields of 35 products from 25 mass chains for ^{232}U(nsub(th),f) have been determined by γ-ray spectroscopy. The resulting mass distribution for ^{232}U is compared with the corresponding existing data on ^{233}U and ^{235}U.

30926 (CEA-CONF—8037) Cold fragmentation in thermal neutron induced fission of ^{235}U. Trochon, J.; Simon, G.; Behrens, J.W.; Brisard, F. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). May 1985. 5p. (CONF-850507—60). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751604.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

The fragmentations without neutron emission (cold fragmentations) have been investigated using a twin-axial gridded ionization chamber, for thermal neutron induced fission of ^{235}U. The kinetic energies of both fragments have been measured with high energy resolution (approximately 300 keV FWHM). Simultaneously, the fragment charges have been determined with a precision of Z/ΔZ=45. The results show, for a given charge split, no even-odd effect in mass yield. The division for a given mass fragmentation is mainly governed by the splitting which maximises the energy released.

30927 (CENBG—8502) Mass energy correlation measurement in ^{252}Cf spontaneous fission. Sicre, A.; Barreau, G.; Caitucoli, F.; Doan, T.P.; Leroux, B.; Martinez, G.; Asghar, M.; Benfoughal, T. (Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires). 1985. 11p. (In French). (CONF-8502101—10). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751589.

From 8. biennial session on nuclear physics; Aussois, France (4 Feb 1985).

Fragment-mass and kinetic energy distribution measurements for ^{252}Cf(sf) have been extended to the far-out asymmetric low yield fission region up to Msub(H)=190 compared with the existing data that go up to Msub(H) approximately 168. The mass yield Y(M) shows an important enhancement for Msub(H)>=176. The <Esub(K)> (M), σEsub(K)(M) and, to a lesser extent, Y(M) distributions show strong and correlated amplitude fluctuations for Msub(H)>=170. These data indicate strong and rapid changes in deformation of the nascent fragments. These structures are discussed in terms of the static macro-microscopic potential energy calculations. Several spherical and deformed shells are involved to stabilize the light fragment and especially the proton spherical shell Z=28. So it is possible to observe very rich neutron nuclei like $_{28}$^{78}Ni. Furthermore we select small excitation energy events (E*=Qsub(R) - Esub(KT)<=8 MeV. The distribution Y(M) for these nearly cold fragmentations is dominated by the strong neutron deformed shell N=88 and shows an important charge odd-even effect.

30928 (INIS-BR—453) Excitation function and half-life for the fission isomer sup(240m) Pu from the ^{238}U(α, 2n) sup(240m) Pu reaction. Barros, S. de; Magalhaes, S.D. de; Wolf, H.; Barreto, J.; Eichler, J.P.F.; Lisbona, N.; Souza, I.O. de; Vianna, D.M. (Rio de Janeiro Univ. (Brazil). Inst. de Fisica). [1986]. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701819.

The excitation function for the fission isomer sup(240m) Pu produced in the reaction of ^{238}U with α particles, has been measured at laboratory incident energies ranging from 20.1 to 27.3 MeV. A value of 3.8 sup(+0.6) sub(-0.4) nsec was obtained for the half-life of sup(240m) Pu. The results are compared with other measurements performed using different experimental methods.

This report includes research activities concerning nuclear structure research of neutron rich and neutron deficient isotopes. Individual sections deal with Coulomb interactions; lifetime measurements of nuclei; calculations and Monte Carlo simulations for predicting responses of Ge and NaI(Tl) detectors to gamma radiation; and beta decay, energy levels, and mass measurements of selected isotopes. The research program features the discovery of new isotopes via their delayed proton decay and the detailed investigation of the beta-delayed, proton spectra. This report covers activities through the contract period from 1979 through 1985. 10 refs. (DWL)

30931 (GANIL-P—85-06) Excitations in grazing heavy ion reactions. Dietrich, K.; Werner, K. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)). 1985. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751321.

We show that a model of independent particle-hole excitations in a two-centre basis is able to produce resonance like structures in cross sections of heavy ion reactions. A fit to the experimental data on the system ^{40}Ca on ^{40}Ca at 400 MeV beam energy yields a relative transfer probability close to one. It reproduces the data quite well at this energy. We show how the excitation of coherent states and the present model can be unified.

30932 (IC—85/45) Construction of local-scale transformed wave functions and its application to ATDHF. Petkov, I.Zh.; Stoitsov, M.V. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701801.

An approach for the introduction of collective variables into a certain many-particle wave function is proposed. The crucial step is the performance of a local-scale point transformation, which naturally introduces the nuclear density characteristics as collective variables. It is established that the local-scale transformed wave functions satisfy the generalized scaling property. Using the continuity equation, a local-scale version of the ATDHF theory is given. Its application to isoscalar monopole vibrations in nuclei leads towards dynamically coupled vibrations of nuclear density. Further possible applications are briefly considered.

30933 (INS—517) Nuclear collision theory with many-body correlations, 1. Formulation. Kurihara, Yukio. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Nov 1984. 37p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701804.

A generalized many-body correlation operator is introduced, following Feshbach's formalism. Especially, the many-body correlation induced by the strong repulsion and attraction of the realistic NN interaction is considered and Feshbach's formalism is reformulated to describe such a many-body correlation well. A method to estimate the many-body correlation operator is given from the multiple-scattering picture. The present formalism is compared with the resonating-group method.

30934 (INS—518) Reflection of the classical age in the intermediate energy physics. Yamaguchi, Yoshio. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Nov 1984. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701799.

Several episodes in the classical epoch (from mid-1930's to early 1950's) of intermediate energy physics (high energy physics at this era) shall be described.

30935 (INS—519) Unified theory of nuclear physics. Yamaguchi, Yoshio. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Nov 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701802.

A unified theory of low and medium energy nuclear physics is formulated on the basis of quasi-nucleons interacting with various sorts of Bose fields. An elementary theory of the EMC-effect is also presented.

Kellogg Radiation Lab.). Feb 1986. Contract AC03-76SF00098. 7p. (CONF-860270—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009356.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

A microcanonical simulation is formulated of the disassembly of a finite nuclear system into individually excitable and mutually interacting nuclear fragments. Illustrative results are presented. 7 refs.

30938 **Evidence for Δ-h components from pion reactions.** Morris, C.L. (Los Alamos National Laboratory, Los Alamos, NM). pp 161-172 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

The role of the excited baryon resonances (such as the Δ / sub 3,3/) in nuclear matter is an important problem which is not yet fully understood. In this paper, some anomalies observed in pion inelastic scattering are explained with a model which includes Δ /sub 3,3/ admixtures in low-lying nuclear states. Semi-quantitative analysis of these effects indicates the amplitudes for the Δ /sub 3,3/ admixtures necessary to explain these effects are on the order of a few percent. Although a more rigorous theoretical treatment of this problem is necessary, it appears that pion-induced reactions may provide a tool with which the spectroscopy of these Δ /sub 3,3/ admixtures can be studied.

30939 **Spin excitations in pion inelastic scattering.** Seestrom-Morris, S.J.; Cottingame, W.B.; Holtkamp, D.B. (Los Alamos National Laboratory, Los Alamos, NM). pp 291-309 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

This paper is a review of the data on spin excitations observed in pion inelastic scattering. A predominant feature of this process is the selectivity with which high-spin unnatural-parity states are excited. Constant-q excitation functions have proven valuable in identifying unnatural-parity states because of the unique signature of $\Delta S = 1$ transitions versus $\Delta S = 0$ transitions. It has been shown recently that angular distributions measured for transitions to natural-parity states can be quite different for $\Delta S = 0$ and $\Delta S = 1$ transitions. Thus, pion scattering should continue to prove useful in studying the spin structure of nuclear transitions because of the sensitivity of both excitation functions and angular distributions to the spin transfer to the nucleus. In particular, pion scattering measurements may be helpful in searches for spin-mode giant resonances.

30940 **Can we learn about the spin flip giant dipole resonances with pions?.** Baer, H.W. (Medium Energy Physics Division, Los Alamos National Laboratory, Los Alamos, NM). pp 523-538 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

This paper describes theoretical studies performed which have predicted the existence of large differences in the angular distribution shapes of $\Delta S = 1,1^-$ and $\Delta S = 0,1^-$ transitions. At forward angles these two angular distributions are nearly out of phase. The preliminary data on the $^{18}O(\pi,\pi')^{18}O(1^-,4.45\ MeV)$ angular distribution at 164 MeV and in the region 20°-60° has a shape which looks very much like the calculations for $\Delta S = 1,1^-$ states. For the study of spin flip components of the giant dipole resonance, the differences in angular distribution shapes between $\Delta S = 0,1^-$, $\Delta S = 1,1^-$ and $\Delta S = 1,2^-$ transitions offers a powerful method for separating these components experimentally. Data and calculations for the $^{40}Ca(\pi^+,\pi^0)$ reactions at 164 MeV are shown which also indicate that pion scattering possesses a unique signature identifying the 1^- and 2^- spin-isospin components of the giant dipole resonance.

30941 **Future possibilities for (n,p) studies at intermediate energies.** Brady, F.P.; Brown, V.R.; Castaneda, C.M.; Poppe, C.H.; Romero, J.L. (Physics Department, University of California, Davis, CA). pp 539-558 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

The study of giant resonances in nuclei via inelastic electron and hadron scattering is currently of great interest. The (n,p) excites only isovector transitions, and since $T_3 = 1^+$, this implies an additional selectivity for (n,p) over (p,n) in N>Z nuclei where only the T+1 analog states will be excited. This paper is an elaboration on the rationale for going to energies higher than 60 MeV in studies using the (n,p) reaction. Among the advantages described are the use of the variation in neutron excess to learn about the role of isospin in the 1kw and 2kw excitations. In addition, (n,p) is a good reaction to learn more about charge exchange with transition densities that do not peak at q=0. The tensor force is more important in 2kw excitations; the exchange and the odd force components may be studied at higher q. One of the hopes for the future is higher energy (n,p) facilities to study spin flip modes and reduce distortion factors.

30942 **Opening remarks: basic quark considerations.** Teller, E. (Lawrence Livermore Laboratory, University of California, Livermore, CA). pp 1-5 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

The Gamow-Teller transition has received renewed interest in light of the recent experiments using (p,n) and other reactions. In particular, there is the question of the missing Gamow-Teller strength. In this paper, the author shows the possibility that the additional strength goes into the transformation of a nucleon into a delta particle. A simple quark model is given that qualitatively shows how the process occurs. The admixture of states caused by the application of the σ/tau/ operator will change the magnetic moments resulting in the presence of pions (with a small probability) and corresponding changed states of neutron, proton and Δ. The admixture of delta states might be a factor of importance, but the explanation of μ of -2.12 for ^3He will remain difficult.

30943 **Spin observables in nucleon-nucleus scattering.** Moss, J.M. (Los Alamos National Laboratory, Los Alamos, NM). pp 355-369 of Spin excitations in nuclei. Petrovich, F.; Brown, G.E. New York, NY; Plenum Press (1984). (CONF-820357—).

From International conference on spin excitations in nuclei; Telluride, CO, USA (25 Mar 1982).

The major problem of inelastic nucleon scattering and charge exchange has always been the enormous complexity of the nucleon-nucleon interaction. This very complexity may prove to be the ultimate promise of nucleons as probes of nuclear structure. It is now feasible to perform complete polarization transfer experiments for inelastic proton scattering with high efficiency and excellent energy resolution. In this paper are presented the procedures of polarimetry with protons in the energy range of 100 MeV, the physics which may be obtained, and the role of these experiments in

present and future research. Expressions are derived from a plane-wave impulse approximation which describe the observables in the excitation of unnatural parity states and natural parity transitions and which evaluate the polarization and analyzing power of polarization transfer. Experiments are discussed which cover spin excitation, spin observables and reaction mechanisms, spin observables and meson exchange, experiments for discrete states and longitudinal and transverse response functions.

30944 **(AREAEE—279) Asymptotic time dependent neutron transport in multidimensional systems.** Nagy, M.E.; Sawan, M.E.; Wassef, W.A.; El-Gueraly, L.A. (Nuclear Research Centre, Inshas (Egypt)). 1983. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701796.

A model which predicts the asymptotic time behavior of the neutron distribution in multi-dimensional systems is presented. The model is based on the kernel factorization method used for stationary neutron transport in a rectangular parallelepiped. The accuracy of diffusion theory in predicting the asymptotic time dependence is assessed. The use of neutron pulse experiments for predicting the diffusion parameters is also investigated.

30945 **(CEA-CONF—7954) Using last event estimator for detection calculations.** Daronian, P.; Verwaerde, D. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Apr 1985. 17p. (CONF-8504110—22). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751591.

From Joint Los Alamos/CEA meeting on Monte Carlo methods; Cadarache, France (22 Apr 1985).

Frequently, the Boltzmann equation has to be solved to obtain responses of a large number of detectors to a neutron flux. It is the case for neutrography and also for simulating a nuclear physics experiment for neutron cross section measurement. A Monte-Carlo method, with a last event estimator seems to be a very suitable one to solve this class of problems. In this paper, the bases of the method are first briefly described and then two main applications are given: a numerical simulation of beryllium cross-section measurement and a neutrography calculation.

30946 **(CONF-860610—3) Nucleon-meson cascade calculations by Monte Carlo methods.** Alsmiller, R.G. Jr.; Alsmiller, F.S.; Gabriel, T.A.; Hermann, O.W. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86005024.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

A brief review is given of Monte Carlo calculations of data concerning the nucleon-meson cascades that develop when high-energy nucleons and mesons pass through matter. The codes discussed cover cascades for incident particles of energies from about 3 GeV up to hundreds of GeV. Some results obtained using different codes are compared. 22 refs., 2 figs. (LEW)

30947 **(DOE/ER/40157—3) Tests of T-invariance with slow neutrons.** Kabir, P.K. (Virginia Univ., Charlottesville (USA). Beams Physics Lab.). 1985. Contract FG05-84ER40157. 5p. (CONF-8511137—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009672.

From Workshop on the investigation of fundamental interactions with cold neutrons; Gaithersburg, MD, USA (14 Nov 1985).

The polarization of neutrons propagating through a medium with spin-polarization S-vector may undergo precession about and towards [k-vector x S-vector]. Either effect is an unambiguous indicator of T-noninvariance. For $S \geq 1$, a similar effect, requiring target spin-alignment only, occurs if there are suitable T-noninvariant interactions even if these conserve parity exactly. 9 refs.

30948 **(LA-UR—85-3347) Diffusion approximation for modeling of 3-D radiation distributions.** Zardecki, A.; Gerstl, S.A.W.; De Kinder, R.E. Jr. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 10p. (CONF-8506217—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86000810.

From CRDC conference; Aberdeen, MD, USA (17 Jun 1985).

A three-dimensional transport code DIF3D, based on the diffusion approximation, is used to model the spatial distribution of radiation energy arising from volumetric isotropic sources. Future work will be concerned with the determination of irradiances and modeling of realistic scenarios, relevant to the battlefield conditions. 8 refs., 4 figs.

30949 **(RAL—85-080) Collective motions in dense fluids observed in neutron scattering.** Lovesey, S.W. (Rutherford Appleton Lab., Chilton (UK)). Sep 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701797.

A few topics of current interest in the study of collective motions in dense liquids and gases, in neutron scattering, are briefly reviewed.

30950 **Parallel S /sub n/ iteration schemes.** Wienke, B.R.; Hiromoto, R.E. (Los Alamos National Laboratory, Computing and Communications Division, Los Alamos, NM). *Nuclear Science and Engineering;* 90: No. 1, 116-123(May 1985).

The iterative, multigroup, discrete ordinates S /sub n/ representation for the linear transport equation enjoys widespread computational use and popularity. Serial iteration schemes and numerical algorithms developed over the years provide a timely framework for parallel extension. On the Denelcor heterogeneous element processor, three parallel iteration schemes (two chaotic, one ordered) are investigated for solving the one-dimensional S /sub n/ transport equation.

30951 **(UCRL—93776) Tissue-equivalent torso phantom for calibration of transuranic-nuclide counting facilities.** Griffith, R.V.; Anderson, A.L.; Dean, P.N.; Fisher, J.C.; Sundbeck, C.W. (Lawrence Livermore National Lab., CA (USA)). 16 Jan 1986. Contract W-7405-ENG-48. 23p. (CONF-860146—8). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009693.

From Radiobioassay and internal dosimetry workshop; Albuquerque, NM, USA (20 Jan 1986).

Several tissue-equivalent human-torso phantoms have been constructed for the calibration of counting systems used for in-vivo measurement of transuranic radionuclides. The phantoms contain a simulated human rib cage (in some cases, real bone) and removable model organs, and they include tissue-equivalent chest plates that can be placed over the torso to simulate people with a wide range of statures. The organs included are the lungs, liver, and tracheobronchial lymph nodes. Polyurethane with varying concentrations of added calcium was used to simulate the linear photon-attenuation properties of various human tissues, including lean muscle, adipose-muscle mixtures, cartilage, and bone. Foamed polyurethane was used to simulate lung tissue. Organs have been loaded with highly pure ^{238}Pu, ^{239}Pu, ^{241}Am, and other radionuclides of interest. The validity of the phantom as a calibration standard has been checked in separate intercomparison studies using human subjects whose lungs contained a plutonium simulant. The resulting phantom calibration factors generally compared to within +-20% of the average calibration factors obtained for the human subjects.

30952 (BNL—37962) Crystallography of icosahedral crystals. Bak, P. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 8p. (CONF-8603112—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009945.

From Winter school on aperiodic crystals; Les Houches, France (11 Mar 1986).

The crystallography of icosahedral crystals is constructed. The actual three-dimensional crystal is represented by a three-dimensional cut in a regular six-dimensional periodic crystal with symmetry described by a six-dimensional space group, and the positions of atoms correspond to an arrangement of hypersurface segments. The resulting crystal cannot in general be viewed as a space-filling arrangemment of a small number of different "Penrose tiles." The intensities of Bragg spots are given directly as the intensities of Bragg spots of the six-dimensional crystal. 16 refs., 2 figs.

30953 Phenomena involving magnetic moment suppression. Maple, M.B. (Department of Physics and Institute for Pure and Applied Physical Sciences, University of California, San Diego, La Jolla, CA). pp 1-24 of Moment formation in solids. Buyers, W.J.L. New York, NY; Plenum Press (1984). (CONF-8308132—).

From NATO/CAP institute on moment formation in solids; Vancouver Island, Canada (21 Aug 1983).

The following is an abbreviated account of a series of three lectures that were given by the author at the NATO/CAP Advanced Study Institute on Moment Formation in Solids. Various phenomena that are associated with magnetic moment suppression in rare earth and actinide systems were reviewed in these lectures, the first two of which were primarily (but not exclusively) devoted to concentrated systems such as α-Ce, "gold" SmS, and UIn_3B_2, and the last of which focused on dilute systems such as (LaCe)Al_3, (LaSm)Sn_3 and ThU. Magnetic moments in rare earth (RE) and actinide (A) systems are derived from partially-filled 4f and 5f electron shells of the RE and A ions, and their degree of suppression (or development, depending on one's viewpoint) spans a continuum between well-defined (Curie-like magnetic susceptibility) and nonexistent (Pauli-like magnetic susceptibility). Any degree of magnetic moment suppression may be found in a given rare earth or actinide substance under ambient conditions, or it may often be induced by the application of an external pressure or by alloying with another element.

30954 Theory of elementary excitations in intermediate valence materials. Fedro, A.J.; Sinha, S.K. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, IL). pp 135-151 of Moment formation in solids. Buyers, W.J.L. New York, NY; Plenum Press (1984). (CONF-8308132—).

From NATO/CAP institute on moment formation in solids; Vancouver Island, Canada (21 Aug 1983).

We review the formalism for calculating the properties of systems represented by an Anderson lattice Hamiltonian. First, a mean-field theory for the one electron Green's function is presented and then extended to include spin and charge fluctuations which lead to a many-body resonance near the Fermi level. The dynamical spin susceptibility and neutron scattering cross section are also evaluated. Finally, we present a calculation which indicates the possibility of a Cooper-pairing mechanism induced by electron correlations.

30955 (BNL—37891) Spectral and parameter estimation problems arising in the metrology of high performance mirror surfaces. Church, E.L.; Takacs, P.Z. (Army Armament Research and Development Command, Dover, NJ (USA); Brookhaven National Lab., Upton, NY (USA)). Apr 1986. Contract AC02-76CH00016. 4p. (CONF-860475—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009914.

From International conference on acoustics, speech and signal processing; Tokyo, Japan (7 Apr 1986).

The accurate characterization of mirror surfaces requires the estimation of two-dimensional distribution functions and power spectra from trend-contaminated profile measurements. The rationale behind this, and our measurement and processing procedures, are described. The distinction between profile and area spectra is indicated, and since measurements often suggest inverse-power-law forms, a discussion of classical and fractal models of processes leading to these forms is included. 9 refs.

30956 (CEA-CONF—8028) Skyrmions. Blaizot, J.P. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Mar 1985. 13p. (CONF-850375—21; SPh-T—85-085). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751365.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

This review is an introduction to the physics of the Skyrmion. The Skyrme model is described with emphasis on its most important qualitative aspects. The interpretation of Skyrme model as an effective theory related to QCD is discussed. The semi-classical quantization of the Skyrmion is presented and justification is given for the interpretation of the winding number as the baryon number. It is show that chiral Lagrangian may provide a unifying framework for baryon and meson phenomenologies.

30957 (IC—84/232) Canonical ensemble redefined - 2: Magnetic systems. Venkataraman, R. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1984. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701711.

The mean field theory and the 1-D Ising model for magnetic systems are solved in the redefined ensemble formalism. In the mean field theory spontaneous magnetization is governed by the relation αprimesub(I)+2β=1 where αprimesub(I) is the input value of the critical exponent for the specific heat. 1-D Ising does not show any spontaneous magnetization even in microcanonical ensemble calculation.

30958 (LA-UR—85-3264) Foundations of statistical crack mechanics. Dienes, J.K. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 7p. (CONF-860616—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86000764.

From International symposium on intense dynamic loading and its effects; Beijing, China (3 Jun 1986).

The principle of superposition of elastic and plactic strain rates in regions of plastic flow was hypothesized by Reuss in order to provide a smooth transition of the stresses between regions of elastic and elastic-plastic deformation. In this paper a generalization of this hypothesis is derived which allows for the formulation of more complex constitutive laws that can account for simultaneous plastic flow, fracture, fragmentation, and changes in porosity. Such processes can occur during impact, explosions and earthquakes. The possibility of analyzing such processes by finite element methods has been made possible by the advent of large scale computers, but most practioners agree that more general constitutive laws are required to account adequately for the complex flow processes involved.

30959 **(UCRL—92562-Rev.1) Comparison of Clifford and Grassmann algebras in applications to electromagnetics. Revision 1.** Deschamps, G.A.; Ziolkowski, R.W. (Illinois Univ., Urbana (USA). Dept. of Electrical and Computer Engineering; Lawrence Livermore National Lab., CA (USA)). Feb 1986. Contract W-7405-ENG-48. 17p. (CONF-8509246—1-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009716.

From Advanced research workshop: Clifford algebras and their applications to mathematical physics; Canterbury, England (15 Sep 1985).

Grassmann and Clifford algebras are compared as to their applications to electromagnetics. The Grassmann algebra applies directly to (exterior) differential forms leading to Cartan's calculus. Forms of various degrees correspond most naturally to electromagnetic quantities and their relations are expressed by means of the exterior differential operator d. These relations are conveniently represented either in space or space-time by flow diagrams. They reveal the existence of potentials (Poincare's Lemma), the independence from coordinate systems, and the role of the metric. All of these properties are briefly reviewed. A calculus for functions having their values in a Clifford algebra can also be developed based on the Dirac operator D, whose square is a generalized Laplacian. Besides its role in Dirac's theory of the electron, this Clifford calculus can also be adapted to electromagnetics, although less directly than with Cartan's calculus. The point of departure is the role of a metric in a Clifford algebra. This can be remedied by introducing the Hodge star operator in the Grassmann algebra, an operation that is needed to express the property of matter usually represented by means of ϵ and μ. 10 refs., 5 tabs.

30960 **(BNL—37846) Zero models and pole models for multivariable systems.** Zhang, S.Y. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 5p. (CONF-860638—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009442.

From American control conference; Seattle, WA, USA (18 Jun 1986).

In this paper, the concepts of zero models and pole models are introduced for the multivariable systems. The definitions are different from the existing definitions of poles and zeros for multivariable systems they reflect more structural informations for the systems, and can be used to study the external properties of the systems. The pole models and zero models in the closed-loops are also discussed. It will be shown that the zero models of the closed loop systems play a key role in the tracking and rejection problem. 15 refs., 5 figs.

30961 **(SOL—86-3) Constructive characterization of Q_0-matrices with nonnegative principal minors.** Aganagic, M.; Cottle, R.W. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jan 1986. Contract AS03-76ER72018. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009867.

The class of matrices with nonnegative principal minors for which the linear complementarity problem always has a solution is characterized. The main result gives a finitely testable set of necessary and sufficient conditions under which a matrix with nonnegative principal minors has the property that if a corresponding linear complementarity problem is feasible then it is solvable. 15 refs.

30962 **(DOE/ER/53134—T1) Complex geometric optics theory in an inhomogeneous plasma. Appendix B.** Bravo-Ortega, A.; Glasser, A.H. (Auburn Univ., AL (USA). Dept. of Physics). 1984. Contract AS05-82ER53134. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009884.

The geometric optics theory is applied to an inhomogeneous plasma in which the dielectric tensor is not necessarily Hermitian. A complex dispersion relation for a non-degenerate plasma is obtained as well as complex ray tracing and amplitude equations. From the amplitude equation is possible to identify and separate the focusing effects according to their effects on the plasma e.g., those ones due to cutoffs and resonances.

30963 **(DOE/ER/53134—T2) Mode conversion of lower hybrid waves at high ion cyclotron harmonics. Appendix F.** Swanson, D.G.; Cho, S. (Auburn Univ., AL (USA). Dept. of Physics). May 1985. Contract AS05-82ER53134. 5p. NTIS, PC A02. File Number DE86009885.

The problem of ion cyclotron harmonic absorption for a lower hybrid wave is shown to be a mode conversion problem. A new form of the dispersion relation is developed and then expanded to get a differential equation identical to that for the second harmonic problem. The validity of this model is restricted to the region far from the lower hybrid resonance layer. It is shown that mode couplings occur among the incident cold wave and two other waves, and the tunneling factor becomes singular there.

30964 **(DOE/ER/53140—24) ICRF wave propagation and absorption in axisymmetric mirrors. Annual report, July 1, 1985-February 28, 1986.** Todd, A.M.M.; Phillips, M.W. (Grumman Aerospace Corp., Bethpage, NY (USA)). Apr 1986. Contract AC02-82ER53140. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010234.

A numerical code called GARFIELD has been developed to calculate the structure of ICRF electric fields in axisymmetric mirrors. It is being used to investigate ICRF wave structure of central cells of tandem mirror experiments. Fields are solved on a 2-D grid in the axial and radial directions. This permits us to study the effect that axial as well as radial variations of the magnetic field and density have on ICRF wave propagation and absorption. Much of this time frame was spent writing the code and refining the numerics. Initial calculations have been completed for the Phaedrus tandem mirror. These show that there is an evanescent fast wave structure in the radial direction, a standing wave formation in the axial direction, and a small amount of propagating ion cyclotron wave towards a shallow magnetic beach in the center of the mirror. In general, the fields peak on the outside which would show that the resulting pondermotive force would tend to stabilize the plasma.

30965 **(DOE/ER/53206—T1) Theoretical studies of the heating of toroidal plasmas with radiofrequency electromagnetic radiation. Progress report, July 1, 1985-June 30, 1986.** Swanson, D.G.; Wersinger, J.M.; Hanson, J.D. (Auburn Univ., AL (USA). Dept. of Physics). Apr 1986. Contract FG05-85ER53206. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009804.

Progress is reported in several areas of interest to rf heating of plasmas. (1) The continuing improvement of the ray-tracing code includes improved speed and accuracy. The development of a complex ray-tracing code is largely implemented. This allows the following of rays through regions where normal ray-tracing methods fail. (2) A major contribution is in the area of parametric instabilities, and a way to minimize their effect on the lower hybrid waves. By following a bundle of rays and evaluating the growth rate for

the most rapidly growing waves at each point, the daughter waves have been followed to the point where pump depletion begins to be important. (3) The continuing study of mode conversion problems has taken several directions. It has been shown that ion absorption of lower hybrid rays frequently involves cases where three types of waves are coupled through linear mode conversion in the same region of space, namely the cold lower hybrid wave, the warm lower hybrid wave, and an ion Bernstein mode. This three wave coupling problem is analyzed analytically in terms of a sixth order wave equation which describes coupling between all branches, but the analytical model may not adequately represent the physical problem. Numerical methods have been compared in terms of accuracy, and the comparisons show some touted methods to be useful only in very restricted ranges of parameter space. Finally, a method of reducing the order of the differential equations in mode conversion problems is described which is exact.

30966 **(EUR-CEA-FC—1264) Identification of highly-ionized xenon spectra (Xe XXVI through Xe XXXI) excited in the plasma of the TFR Tokamak.** Wyart, J.F.; Bauche-Arnoult, C.; Luc-Koenig, E. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). May 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751586.

The spectrum of xenon injected into the TFR tokamak plasma has been recorded in the range 10-90 A by means of a 2m grazing incidence spectrograph. Forty-four lines and unresolved transition arrays pertaining to multicharged xenon ions isoelectronic with Cu I, Ni I, Co I, Fe I, Mn I and Cr I have been identified by means of various theoretical methods. The 17 observed lines of the $3p^6 3d^8$ - $3p^5 3d^9$ transition array, have allowed the wavelengths of the magnetic dipole transitions occuring within the ground configuration $3d^8$ of Xe XXXIX to be predicted.

30967 **(EUR-CEA-FC—1265) Theoretical and experimental study of modes associated to ion cyclotron heating on TFR.** Pignol, L. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee; Paris-7 Univ., 75 (France)). May 1985. 160p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE86751594.

In this work, the ion cyclotron wave evolution is followed thanks to a coherent scattering device using carbon dioxide laser radiation. A theoretical part presents the dispersion equation that obey the waves excited in the plasma by antenna emitting ion cyclotron frequency. Then measurements given by the diagnostic are given. Fast and slow waves evidenced theoretically, are experimentally observed. Two simple theoretical models allow to extract physical quantities characteristics of the two modes. These two modes are followed along the radial coordinate of the tore and their behavior through the hybrid curve is studied. measured spectra shape is shown to confirm the described numerical code validity. Time study of the slow wave shows of internal relaxation phenomenon of plasma.

30968 **(FRNC-TH—2164) Automatic measurement of characteristic quantities of nuclear plasma.** Stathopoulos, D. (Paris-11 Univ., 91 - Orsay (France)). Nov 1983. 108p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE86751593.

The work presented here is part of researches on simulation on plasma produced by nuclear radiations, so as to understand nuclear pumping laser operation. This thesis is more peculiarly aimed at studying the effect on plasma of an electromagnetic pulse of heating, using computing means to automatized the heating device and acquire data. Measurements have been made in neon and nitrogen mixture and have been extended to neon-nitrogen-oxygen mixture. A diagnostic method allows to know ionization effiency of the beam, together with laws, related to temperature, of recombination coefficients of created ions. As an example, the oxygen introduction in the mixture allowed to get the first results on this gas.

30969 **(GA-A—18380) Comparison of experimentally-inferred ion thermal diffusivities with neoclassical theory for neutral beam-heated discharges in the Doublet III tokamak.** Groebner, R.J. (GA Technologies, Inc., San Diego, CA (USA)). Apr 1986. Contract AC03-84ER51044. 7p. (CONF-860412—7). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010223.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The study of ion transport in neutral beam-heated discharges in tokamaks is necessary to determine if neoclassical theory can reliably be used to predict the performance of future machines. Previous studies of ion tranport have generally been difficult due to the lack of information regarding the ion temperature profile. The standard procedure used to study ion transport has been to model the T/sub i/ profile with the assumption that the ion thermal diffusivity profile chi/sub i/(r) was equal to a multiplier times chi/sub i//sup neo/(r), the ion thermal diffusivity calculated from neoclassical theory. The multiplier was varied until the calculated T/sub i/ profile agreed with the available ion temperature data, usually T/sub i/(0) or the measured neutron rate. Values of the multiplier in the range of 1 to 10 have generally been obtained with few estimates of the uncertainties in these values. Furthermore, there have been few, if any, attempts to calculate chi/sub i/ by modeling the ion temperature profiles in other ways. As a result, the issue as to whether or not the ion transport in tokamaks is in agreement with neoclassical theory has not been definitively answered.

30970 **(GA-A—18412) Finite-beta global MHD stabilities for circular and highly-elongated tokamaks with and without poloidal divertors.** Lee, J.K. (GA Technologies, Inc., San Diego, CA (USA)). May 1986. Contract AC03-84ER53158. 6p. (CONF-860515—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010278.

From EPS conference on computational physics - computing in plasma physics; Partenkirchen, F.R. Germany (13 May 1986).

A new initial value code is used in calculating the global MHD stabiliies for several highly elongated tokamak equilibria with magnetic separatrices as well as for circular equilibria near the beta limit.

30971 **(GA-A—18414) Plasma density and poloidal field measurements on text using an injected lithium beam.** West, W.P. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1986. Contract AC03-84ER53158. 24p. (CONF-860324—26). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010210.

From High temperature plasma diagnostics; Hilton Head Island, SC, USA (9 Mar 1986).

Spectroscopy of an injected Li beam has been used to determine both the plasma density profile and the poloidal field profile on the TEXT tokamak. The neutral Li beam is injected at energies up to 95 keV and both collisional and laser-induced fluorescence are observed during a tokamak shot. Radial and temporal profiles are obtained during a complete shot. The applicability of this technique to larger tokamaks depends on several parameters including (but not limited to) beam penetration, reliability, spatial/temporal resolution, and signal-to-noise ratio. Because this basic technique obtains local measurements, it is also applicable to nonsymmetric devices. Such applications will be discussed.

30972 **(GA-A—18415) Cw dye laser system for Li beam spectroscopy in a tokamak.** West, W.P.; Thomas, D.M. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1986. Contract AC03-84ER53158. 17p. (CONF-860324—24). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010217.

From High temperature plasma diagnostics; Hilton Head Island, SC, USA (9 Mar 1986).

The current density profile diagnostic system developed for the TEXT tokamak employs a cw dye laser system to induce fluorescence in a Li beam injected into a tokamak. This laser spectral and polarization modulation requirements not available in commerical systems. The required spectrum is a bandwidth of approximately 5 GHz at a wavelength of 667 nm. The intensity within the bandwidth should be as uniform as possible, i.e., a quasi-continuum within the 5 GHz bandwidth. The polarization of the laser must

remain linear, but the plane of polarization must be rotated at a high frequency, 50 kHz. The details of the Li atomic spectrosocpy in a tokamak and the requirements of the diagnostic system that lead to these desired laser parameters will be addressed. The laser system and polarization modulator which have been developed will be discussed in detail, including both design and performance parameters. Possible improvements to enhance performance will also be addressed.

30973 **(Juel—2016) Real-time evaluation of electron and current density profile parameters on TEXTOR.** Bruessau, W.D.; Soltwisch, H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik). Aug 1985. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751635.

The shapes of electron and current density profiles are monitored in real-time mode in order to get rapid qualitative information on the development of a TEXTOR tokamak plasma. The profiles are described by form parameters which relate to the signals of a 9-channel FIR-polari/interferometer in simple mathematical formulae. These profile parameters are obtained by real-time conversion of measured quantities for display on a storage oscilloscope or on a chart recorder. The application of the parameters is demonstrated in some examples.

30974 (KEK—83-21, pp 101-108) **Application of polarized ions to fusion reactors.** Hasuyama, Hiroki; Wakuta, Yoshihisa. (Kyushu Univ., Fukuoka, Japan. Faculty of Engineering). Jan 1984. NTIS (US Sales Only), PC A06/MF A01. File Number DE86780444. (CONF-8303216—).

From Symposium on ion sources in accelerators; Oho, Ibaraki, Japan (15 Mar 1983).

It has been shown in a hot plasma of a magnetic fusion reactor that it would be possible to maintain the polarized nuclear spins for a certain confinement time. Some advantages of the fusion reactor using polarized nuclei are also described. The depolarization rates of the nuclear spin in the plasma have been estimated by considering several mechanisms for the spin flip in a strong-field fusion reactor.

30975 **(LA—10627-MS) Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media.** Borovsky, J.E. (Los Alamos National Lab., NM (USA)). Mar 1986. Contract W-7405-ENG-36. 19p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009798.

The numerical techniques used to simulate the propagation of low-frequency electromagnetic disturbances in Ohmic media and in collisional and collisionless plasmas are discussed. The scheme is based upon a multimedia propagation equation that is derived from Maxwell's equations. 10 refs., 5 figs.

30976 **(LP—199) S3T working group. Report 1: group aims.** Pouey, M. (Paris-11 Univ., 91 - Orsay (France). Lab. de Physique des Plasmas). Apr 1983. 45p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751588.

The work group S3T which is aimed to designing and developing devices using unconventional holographic optics is presented. These devices find applications that are classified here in four items high resolution spectrometers, high definition imaging, high flux devices, metrology and interferometry. The problems to solve and the aims of the group in each of these cases are presented. Three synthesis of lectures are in this report. The main one concerns stigmatism conditions of concave holographic gratings used in normal incidence. This new process of focusing is very interesting for hot plasma diagnostics.

30977 **(LP—201) Electron energy distributions and excitation rates in high-frequency argon discharges.** Ferreira, C.M.; Loureiro, J. (Paris-11 Univ., 91 - Orsay (France). Lab. de Physique des Plasmas). Jun 1983. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751587.

The electron energy distribution functions and rate coefficients for excitation and ionisation in argon under the action of an uniform high-frequency electric field were calculated by numerically solving the homogeneous Boltzmann equation. Analytic calculations in the limiting cases $\omega >> \nu/\text{sub c}/$ and $\omega << \nu/\text{sub c}/$, where ω is the wave angular frequency and $\nu/\text{sub c}/$ is the electron-neutral collision frequency for momentum transfer, are also presented and shown to be in very good agreement with the numerical computations. The results reported here are relevant for the modelling of high-frequency discharges in argon and, in particular, for improving recent theoretical descriptions of a plasma column sustained by surface microwaves. The properties of surface wave produced plasmas make them interesting as possible substitutes for other more conventional plasma sources for such important applications as plasma chemistry laser excitation, plasma etching spectroscopic sources etc.

30978 **(PPPL—2268) Method for determining fast-alpha-particle confinement in tokamak plasmas using resonant nuclear reactors.** Cecil, F.E.; Zweben, S.J.; Medley, S.S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1986. Contract AC02-76CH03073. 25p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009757.

The resonant nuclear reactions $D(\alpha,\gamma)^6Li$, $^6Li(\alpha,\gamma)^{10}B$, and $^7Li(\alpha,\gamma)^{11}B$ are examined as diagnostics of fast-alpha-particle confinement in tokamak plasmas. Gamma rays from these resonant reactions with energies from 2.1 MeV to 9.2 MeV may be used to infer the alpha-particle population between energies of 0.4 MeV and 2.6 MeV. The ratio of these alpha-burnup reactions to the reactions $T(D,\gamma)^5He$ and $^3He(D,\gamma)^5Li$ provides a technique for the measurement of alpha confinement.

30979 **(PPPL—2272) Numerical modeling of lower hybrid heating and current drive.** Valeo, E.J.; Eder, D.C. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1986. Contract AC02-76CH03073. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009750.

The generation of currents in toroidal plasma by application of waves in the lower hybrid frequency range involves the interplay of several physical phenomena which include: wave propagation in toroidal geometry, absorption via wave-particle resonances, the quasilinear generation of strongly nonequilibrium electron and ion distribution functions, and the self-consistent evolution of the current density in such a nonequilibrium plasma. We describe a code, LHMOD, which we have developed to treat these aspects of current drive and heating in tokamaks. We present results obtained by applying the code to a computation of current ramp-up and to an investigation of the possible importance of minority hydrogen absorption in a deuterium plasma as the "density limit" to current drive is approached.

30980 **(PPPL—2284) Characterization of the TFTR plasma edge by Langmuir-calorimeter probes.** Kilpatrick, S.J.; Manos, D.M.; Budny, R.V.; Stangeby, P.C.; Ritter, R.S.; Young, K.M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1986. Contract AC02-76CH03073. 21p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009758.

Two combination Langmuir-calorimeter probes were operated on the TFTR midplane to measure plasma properties of the scrape-off layer. Two different caloriemter elements were used: 0.5 x 3 x 8 mm Ta plates or 6.4 mm diameter graphite rods fitted with thermocouples. Separate graphite rods served as Langmuir elements. This paper presents Langmuir probe measurements of the radial profiles of edge density and electron temperature, and calorimeter measurements of heat flux. The variation of these quantities in certain operational regimes are presented, including dependence on ohmic and neutral beam heating, compression and free expansion, plasma major and minor radii, plasma current, and line integral density with and without Cr gettering.

30981 **(PPPL—2314) Pressure limits of an axisymmetric torus.** Yoshikawa, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1986. Contract AC02-76CH03073. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009753.

In order to clarify the pressure limit of a toroidal plasma equilibrium in a three-dimensional geometry, an azimuthally symmetric toroidal plasma was considered. In a tokamak-like plasma, the net toroidal current is necessary for a finite β plasma equilibri-

um. If external conductors are used to provide the rotational transform, iota, the plasma pressure is limited to $\beta = (\text{iota}/2\pi)^2/2A$, where A is the aspect ratio.

30982 **(SAND—86-0283) Estimates of maximum trappable ion beam power in plasma channels.** Watrous, J.J.; Olson, R.E. (Wisconsin Univ., Madison (USA). Fusion Technology Inst.; Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 6p. (CONF-860652—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86006472.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

Conservation laws and solutions to the equations of motion for single particles have been used to obtained greatest lower bounds on the ion beam power that can be injected into and confined within plasma channels. These bounds are use in the evaluation of proposed light ion driven ICF experiments and reactor concepts. Simple estimates of trappable power based on conservation laws will be compared with estimates based on solutions to the equation of motion. Consequences of the results of these calculations to current design studies will be discussed.

30983 **(UCID—20732) Ion diffusion at interfaces in hot plasmas.** Boercker, D.B.; Warren, K.; Haggin, G. (Lawrence Livermore National Lab., CA (USA)). Apr 1986. Contract W-7405-ENG-48. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009935.

There are many laboratory applications in which it is important to know how fast two hot, ionized materials mix across an initially sharp interface. The speed of this process is regulated by the interdiffusion coefficient for the species involved. In a previous work, a theoretical method for calculating the interdiffusion coefficient in a Binary Ionic Mixture (classical ions in a uniform, neutralizing background) was described and found to give excellent agreement with Molecular Dynamics estimates. The purpose of this report is to show how these results may be applied to a model of the plasma interface, including electric field effects, to give a good description of the mixing across it.

30984 **(UCRL—93878-Rev.1) Database tools for enhanced analysis of TMX-U data. Revision 1.** Stewart, M.E.; Carter, M.R.; Casper, T.A.; Meyer, W.H.; Perkins, D.E.; Whitney, D.M. (Lawrence Livermore National Lab., CA (USA)). 6 Mar 1986. Contract W-7405-ENG-48. 13p. (CONF-860324—3-Rev.1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009894.

From High temperature plasma diagnostics; Hilton Head Island, SC, USA (9 Mar 1986).

A commercial database software package has been used to create several databases and tools that assist and enhance the ability of experimental physicists to analyze data from the Tandem Mirror Experiment-Upgrade (TMX-U) experiment. This software runs on a DEC-20 computer in M-Division's User Service Center at Lawrence Livermore National Laboratory (LLNL), where data can be analyzed offline from the main TMX-U acquisition computers. When combined with interactive data analysis programs, these tools provide the capability to do batch-style processing or interactive data analysis on the computers in the USC or the supercomputers of the National Magnetic Fusion Energy Computer Center (NMFECC) in addition to the normal processing done by the TMX-U acquisition system. One database tool provides highly reduced data for searching and correlation analysis of several diagnostic signals within a single shot or over many shots. A second database tool provides retrieval and storage of unreduced data for use in detailed analysis of one or more diagnostic signals. We will show how these database tools form the core of an evolving offline data analysis environment on the USC computers.

30985 **(UCRL—93970) ICRF heating of passing ions in TMX-U.** Molvik, A.W.; Dimonte, G.; Barter, J.; Campbell, R.; Cummins, W.F.; Falabella, S.; Ferguson, S.W.; Poulsen, P. (Lawrence Livermore National Lab., CA (USA)). Apr 1986. Contract W-7405-ENG-48. 5p. (CONF-860412—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009405.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

By placing ion-cyclotron resonant frequency (ICRF) antennas on both sides of a midplane gas-feed system in the central cell of the Tandem Mirror Experiment-Upgrade (TMX-U), our results have improved in the following areas: (a) The end losses out both ends show a factor of 3 to 4 increase in passing-ion temperatures and a factor of 2 to 3 decrease in passing-ion densities. (b) The passing-ion heating is consistent with Monte Carlo predictions. (c) The plasma density can be sustained by ICRF plus gas fueling as observed on other experiments.

30986 **(UCRL—94207-Rev.1) Question of consistent boundary conditions when simulating reversed field pinch dynamics. Revision 1.** Mirin, A.A. (Lawrence Livermore National Lab., CA (USA)). Mar 1986. Contract W-7405-ENG-48. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009609.

The issue of proper boundary conditions when performing magnetohydrodynamic simulations of the reversed field pinch is examined. Of particular concern is the choice of constant current, which when combined with other commonly used boundary conditions, may, under careless implementation, lead to an inconsistency. It is shown that this may cause erroneous results. Cases both with and without Hall terms are presented.

30987 **Low-temperature plasma near a tokamak reactor limiter.** Braams, B.J.; Singer, C.R. (Princeton Plasma Physics Laboratory, Princeton University, Princeton, NJ 08544). *Fusion Technology;* **9**: No. 2, vp(Mar 1986).

Analytic and two-dimensional computational solution for the plasma parameters near a toroidally symmetric limiter are illustrated for the projected parameters of a tokamak fusion core experiment (TFCX). The temperature near the limiter plate is below 20 eV, except when the density 10 cm inside the limiter contact is 8 x 10^{13} cm^{-3} or less and the thermal diffusivity in the edge region is 2 x 10^4 cm^2/S or less. Extrapolation of recent experimental data suggests that neither of these conditions is likely to be met near ignition in TFCX, so as a low plasma temperature near the limiter should be considered a likely possibility.

30988 **Electron cyclotron heating at down-shifted frequencies in existing tokamak devices.** Mazzucato, E.; Fidone, I.; Giruzzi, G.; Krivenski, V. (Princeton Univ., NJ, USA. Plasma Physics Lab.; Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92, France. Dept. de Recherches sur la Fusion Controlee). *Nuclear Fusion;* **26**: No. 1, 3-9(Jan 1986).

Plasma heating in existing tokamak devices by electron cyclotron waves with frequency (f) significantly smaller than the electron gyrofrequency (fsub(c)) is investigated for the case of Maxwellian plasmas. It is shown that for central electron temperatures larger than 3 keV, strong absorption of extraordinary waves can occur at values of the toroidal field for which the condition f=fsub(c) is not satisfied in the plasma region. The cases of f=60 GHz and f=100 GHz are discussed for the PLT and TFTR devices as being representative of medium (approx. 30 kG) and high (approx. 50 kG) magnetic field tokamaks, respectively. Numerical calculations with a ray tracing code indicate that most of the RF energy is absorbed in a central plasma region. These results are of practical interest because they significantly simplify the main technical problem of ECH in a tokamak reactor, i.e. the development of high-frequency and high-power microwave sources.

30989 **Divertor and edge plasma properties in Doublet III expanded boundary discharges.** Kahn, C.; Burrell, K.H.; Ejima, S.; Fairbanks, E.; Petrie, T.; Shimada, M.; Washizu, M. (GA Technologies, Inc., San Diego, CA, USA). *Nuclear Fusion;* **26**: No. 1, 73-83(Jan 1986).

Edge plasma conditions and their variation with main plasma density and with neutral-beam input power are presented for expanded boundary divertor discharges produced in the Doublet III tokamak. The density and temperature in the divertor plasma and the heat flux to the divertor plates not only change with the main plasma density and neutral-beam input power but also depend on

the level and type of recycling activity present in the divertor. However, the shape of the heat flux profile on the divertor plates is quite insensitive to variations in divertor properties. This insensitivity, together with the weak increase of peak heat flux on the divertor plate with input power, is favourable for the use of an expanded boundary divertor in future fusion reactors. Owing to the similarity of the magnetic configuration, the results from the expanded boundary divertor should be directly applicable to the divertor design for INTOR.

30990 **Top-versus-side launch of lower hybrid waves in PLT.** Bernabei, S.; Bell, R.; Chu, T.K. (Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 1, 111-114(Jan 1986).

Experiments with the PLT 2.45 GHz system show that lower hybrid waves launched from the top of the tokamak torus are about half as effective for current drive as an identical spectrum of waves launched from the outside of the torus at intermediate densities (1-2 x $10^{13}cm^{-3}$).

30991 **Effects of alpha particles on the scattering function in CO_2 laser scattering.** Vahala, L.; Vahala, G.; Sigmar, D.J. (College of William and Mary, Williamsburg, VA, USA. Dept. of Physics; Massachusetts Inst. of Tech., Cambridge, USA. Plasma Fusion Center). *Nuclear Fusion;* **26**: No. 1, 51-60(Jan 1986).

It is shown that the alpha-particle contribution to the scattered power can be dominant in the coherent scattering of a CO_2 laser in a Maxwellian plasma. For Tsub(i)=Tsub(e)=10 keV, the optimal forward-scattering angle is around 1.0 deg., with detection of the electron density fluctuation wave numbers ksub(perpendicular) >> ksub(parallel) (relative to the toroidal magnetic field). A strong resonance occurs at the lower hybrid frequency. Because of the strong dependence of the scattered signal on the alpha-particle temperature and the alpha distribution function, it seems feasible that CO_2 laser scattering, using heterodyne techniques, could give detailed local information on fusion alphas.

30992 **Note on the Mirnov signal analysis in tokamaks.** Kikuchi, M. (Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 1, 101-107(Jan 1986).

The relation between Mirnov coil signals and the current perturbation on a rational surface is examined analytically by using the approximate Green's function for the case of large-aspect-ratio circular tokamaks. Satellite island formation, phase modulation effects due to the poloidal variation of the field line pitch, and the effect of the shift of the plasma column with respect to the centre of the vacuum chamber are examined. The detectability of these effects by Mirnov coils is discussed for the TFTR experiment.

30993 **Non-ideal ballooning modes in a tokamak.** Dominguez, R.R.; Moore, R.W. (GA Technologies, Inc., San Diego, CA, USA). *Nuclear Fusion;* **26**: No. 1, 85-100(Jan 1986).

Hybrid two-fluid and kinetic equations have been used to study ballooning modes in a tokamak. These modes separate into two branches: a modified ideal magnetohydrodynamic (MHD) ballooning mode and a toroidally induced ion temperature gradient (etasub(i)) mode. Using both model and actual high beta equilibria we find that the etasub(i) mode (etasub(i)=deltaIn Tsub(i)/deltaInNsub(i)) may dominate the ideal MHD mode for moderate etasub(i)(etasub(i) > or approx. 1), leading to substantially lower beta thresholds.

30994 **ICRF fusion reactivity enhancement in tokamaks.** Harvey, R.W.; Chiu, S.C.; McCoy, M.G.; Kerbel, G.D. (GA Technologies, Inc., San Diego, CA, USA; Lawrence Livermore National Lab., CA, USA). *Nuclear Fusion;* **26**: No. 1, 43-49(Jan 1986).

A systematic study of ICRF fusion reactivity enhancement has been conducted, using a new bounce-averaged two-dimensional Fokker-Planck code. Second-harmonic heating of deuterium in a 50-50 DT plasma is assumed, and the results are obtained as a function of background plasma density and temperature. An enhancement factor of ten is achieved at low Q (= fusion power/RF power), which is important for ion-tail diagnostics, but at Q=0.5 the enhancement is < or approx. 2. Significant poloidal variations in ion density (up to 14%) and in fusion reactivity (by a factor up to 2.5) are found.

30995 **Confinement studies in TFTR.** Murakami, M.; Arunasalan, V.; Bell, J.D.; Bell, M.G.; Bitter, M.; Blanchard, W.R.; Boody, F.; Boyd, D.; Bretz, N.; Bush, C.E. (Plasma Physics Laboratory, Princeton University, Princeton, NJ). *Fusion Technology;* **8**: No. 1, 657-663(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The paper describes the present (end of February 1985) status of the plasma confinement studies in the TFTR tokamak with emphasis on those with neutral beam injection (NBI). Recent improvements in the device capabilities have substantially extended operating parameters: B /sub T/ increased to 4.0 T, I /sub p/ to 2.0 MA, injection power (P /sub b/) to ° MW with H^0 or D^0 beams, n /sub e/ to 5 x 10^{19} m^{-3} and Z /sub eff/ reduced to 1.4. With ohmic heating (OH) alone, the previously established scaling for gross energy confinement time (T /sub E/ ° n /sub e/ q) has been confirmed at higher I /sub p/ and B /sub T/ , and the maximum T /sub E/ of 0.4 sec has been achieved. With NBI at P /sub b/ substantially (by factor > 2) higher than P /sub OH/ , excellent power and particle accountability have been established. This suggest that the less-than-expected increase in stored energy with NBI is not due to problems of power delivery, but due to problems of confinement deterioration. T /sub E/ is observed to scale approximately as I /sub p/ P /sub b/ /sup 0.5/ (independent of n /sub e/), consistent with previous L-mode scalings. With NBI we have achieved the maximum T /sub E/ of 0.2 s and the maximum T / sub i/ (o) of 4.4 keV in the normal operating regime, and even higher T /sub i/ (o) in the energetic-ion regime with low-n /sub e/ and low I /sub p/ operation.

30996 **Plasma engineering models of tandem mirror devices with high-field test-cell inserts.** Fenstermacher, M.E.; Campbell, R.B. (TRW Inc., Redondo Beach, CA). *Fusion Technology;* **8**: No. 1, 668-673(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Plasma physics and engineering models of tandem mirror devices operated with a high-field technology test-cell insert in the central cell, which have been incorporated recently in the TMRBAR tandem mirror reactor physics code, are described. The models include particle and energy balance in the test-cell region as well as the interactions between the test-cell particles and those flowing through the entire device. The code calculations yield consistent operating parameters for the test-cell, central cell, and end cell systems. A benchmark case for the MFTF-α+T configuration is presented which shows good agreement between the code results and previous calculations.

30997 **Physics-magnetics trade studies for tandem mirror reactors.** Campbell, R.B.; Blackfield, D.T.; Perkins, L.J. (Lawrence Livermore National Lab., Livermore, CA). *Fusion Technology;* **8**: No. 1, 674-679(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

We describe and present results obtained from the optimization package of the Tandem Mirror Reactor Systems Code. We have found it to be very useful in searching through multidimensional parameter space, and have applied it here to study the effect of choke coil field strength and net electric power on cost of electricity (COE) and mass utilization factor (MUF) for MINIMARS type reactors. We have found that a broad optimum occurs at B / sub choke/ = 26 T for both COE and MUF. The COE economy of scale approaches saturation at quite low powers, around 600 MW(e). The saturation is mainly due to longer construction times for large plants, and the associated time related costs. The MUF economy of scale does not saturate, at least for powers up to 2400 MW(e).

30998 **Engineering issues in muon-catalyzed fusion.** Jones, S.E. (Idaho National Engineering Laboratory, Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1511-1524(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Negative muons (elementary particles having a mean life of 2.2 microseconds) have been used to induce nuclear fusion reactions of the type: $\mu^- + d + t \rightarrow {}^4He + n + \mu^-$. Behaving like a very heavy electron, a muon forms a tightly bound deuteron-triton-muon ($dt\mu$) molecule. Fusion then ensues, typically in picoseconds, as the nuclei tunnel through the Coulomb repulsive barrier. Up to 160 fusions per muon (average) have been observed in cold deuterium-tritium mixtures. Thus, the process may be called muon-catalyzed fusion, or "cold" fusion. The fusion energy thus released is twenty times the total energy of the muon driving the fusion reaction. However, the energy needed to produce the muon catalysts is currently much larger than the fusion energy released. In preparing for muon-catalyzed fusion experiments, a number of engineering challenges were encountered and successfully resolved. Similar challenges would be faced in a (hypothetical) cold fusion reactor. High-temperature plasmas and many associated difficulties are of course circumvented. However, the gaseous d-t fuel must be contained at elevated temperatures (about 400°C) and near-liquid density. (Experiments show that increasing either parameter enhances the fusion yield.) This translates into high gas pressures (about 10^8Pa) and a new class of engineering challenges. Material strength and fabricability, hydrogen permeation and material embrittlement, tritium inventory and safety concerns, muon beam scattering and degradation, and reaction vessel geometries are among critical engineering considerations.

30999 **Modeling of non-Gaussian beamlet profile based on total-beam power loss and transmission.** Kim, J.; Stewart, L.D. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1717-1721(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The angular intensity profile of a single beamlet is expressed as a sum of a main Gaussian and a bump-on-the-tail representing the optical aberration. Transmission of a total beam comprised of a large number of beamlets is then analytically derived. By an iterative matching of the calculated transmissions to the measured transmissions through at least two downstream openings, the parameters that describe the single beamlet angular profile are determined. Some of the neutral beam injectors employed for heating fusion plasmas are characterized by this modeling. Also presented is an improved algorithm for calculating the intensity distribution at a downstream plane.

31000 **Optimal control theory applied to fusion plasma thermal stabilization.** Sager, G.; Maya, I.; Miley, G.H. (Fusion Studies Laboratory, Univ. of Illinois, Urbana, IL). *Fusion Technology;* 8: No. 1, 1795-1800(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Optimal control theory is applied to determine feedback control for thermal stability of a driven, subingnition tokamak controlled by fuel injection and additional heating. It was found that the simplifications of the plasma burn dynamics and the control figure of merit required for the synthesis of optimal feedback laws were valid. Control laws were determined which allowed thermal stability in plasmas subject to 10% offset in temperature. The minimum ignition margin (defined as the difference between ignition temperature and the subignition operating point) was found to be 0.95 keV, corresponding to steady state heating requirements of less than 2% of fusion power.

31001 **Shielding analysis for the horizontal x-ray imaging system on the TFTR.** Liew, S.L.; Hill, K.W.; Kolibal, J.; Ku, L.P. (Princeton University, Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 1020-1025(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Intense neutron and gamma radiation will accompany the reactor like DD and DT plasmas that are planned to be generated on the TFTR. Since many plasma diagnostic systems use detectors that are sensitive to neutrons and gamma-rays to various degrees, local shielding will be required to achieve acceptable signal to noise ratios during those high power operations. In this paper, we analyze the shielding problems related to the horizontal x-ray imaging system.

31002 **Low activation diagnostic equipment design studies.** Hopkins, G.R.; Cheng, E.T.; Fisher, R.K. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1402-1407(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The low activation fusion concept has been applied to the diagnostic equipment in a fusion reactor. The components where fabrication from low activation materials is feasible have been identified. Other systems where higher activation elements are required can have their activation reduced by design approaches which include shielding and operation only in low flux regions of the reactor. Some components will not operate in a high flux so activation is not a major concern. This low activation diagnostic equipment study completes a series of low activation studies where all the components in a fusion power reactor have now been evaluated. It is concluded that a completely low activation fusion reactor is feasible with all components meeting the functional requirements. This provides an environmentally benign energy source with a high confidence level in meeting safety criteria in operation, maintenance and waste disposal.

31003 **Plasma instrumentation for fusion power reactor control.** Sager, G.T.; Bauer, J.F.; Maya, I.; Miley, G.H. (Fusion Studies Laboratory, Univ. of Illinois, Urbana, IL). *Fusion Technology;* 8: No. 1, 1789-1794(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Feedback control will be implemented in fusion power reactors to guard against unpredicted behavior of the plant and to assure desirable operation. In this study, plasma state feedback requirements for plasma control by systems strongly coupled to the plasma (magnet sets, RF, and neutral beam heating systems, and refueling systems) are estimated. Generic considerations regarding the impact of the power reactor environment on plasma instrumentation are outlined. Solutions are proposed to minimize the impact of the power reactor environment on plasma instrumentation. Key plasma diagnostics are evaluated with respect to their potential for upgrade and implementation as power reactor instruments.

31004 **TFTR plasma feedback systems.** Efthimion, P.; Hawryluk, R.J.; Hojsak, W.; Marsala, R.J.; Mueller, D.; Rauch, W.; Tait, G.D.; Taylor, G.; Thompson, M. (Princeton Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 1807-1814(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Tokamak Fusion Test Reactor employs feedback control systems for four plasma parameters, i.e. for plasma current, for plasma major radius, for plasma vertical position, and for plasma density. The plasma current is controlled by adjusting the rate of change of current in the Ohmic Heating (OH) coil system. Plasma current is continuously sensed by a Rogowski coil and its associated electronics; the error between it and a preprogrammed reference plasma current history is operated upon by a "proportional-plusintegral-plus-derivative" (PID) control algorithm and combined with various feedforward terms, to generate compensating commands to the phase-controlled thyristor rectifiers which drive current through the OH coils. The plasma position is controlled by adjusting the currents in Equilibrium Field and Horizontal Field coil systems, which respectively determine the vertical and radial external magnetic fields producing J X B forces on the plasma current. The plasma major radius position and vertical position, sensed by "B / sub theta/ " and "B /sub ϱho/ " magnetic flux pickup coils with their associated electronics, are controlled toward preprogrammed

reference histories by allowing PID and feedforward control algorithms to generate commands to the EF and HF coil power supplies. Plasma density is controlled by adjusting the amount of gas injected into the vacuum vessel. Time-varying gains are used to combine lineaveraged plasma density measurements from a microwave interferometer plasma diagnostic system with vacuum vessel pressure measurements from ion gauges, with various other measurements, and with preprogrammed reference histories, to determine commands to piezoelectric gas injection valves.

31005 **Tokamak arc damage.** Murray, J.G.; Gorker, G.E. (Princeton University, Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 664-667(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Tokamak fusion reactors will have large plasma currents of approximately 10 MA with hundreds of megajoules stored in the magnetic fields. When a major plasma instability occurs, the disruption of the plasma current induces voltage in the adjacent conducting structures, giving rise to large transient currents. If disruption-induced currents flow across the gaps long enough, they become concentrated constrictive arc columns that cause high electrode erosion. This report reviews a tokamak arcing scenario and provides guidelines for designing tokamaks to minimize the possibility of arc damage.

31006 **Simulating the effects of plasma disruption with A 1 MA current pulse in a coaxial test fixture.** Praeg, W.F. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 245-250(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A test fixture for simulating plasma disruptions, comprising two coaxial cylinders, has been designed for use with Argonne's electromagnetic test facility FELIX. A pulsed power supply drives a half cycle sine wave current of 10^9 A through the test fixture generating fields of < 2 T and field changes of < 1250 T s^{-1}. The coaxial structure is 140 cm long, has an outer cylinder with an OD of 78 cm and an inner cylinder with an OD of 8.3 cm. It is surrounded by the FELIX solenoid field of 1 T. This proposed upgrade of the FELIX facility should be useful for testing the effect of plasma disruption on First Wall-Blanket-Shield (FWBS) structures; a future upgrade of the solenoid field to 4 T will allow to simulate reactor conditions even better.

31007 **Alpha-driven fast magnetosonic wave heating in tokamak plasmas.** Sutton, W.R.; Miley, G.M.; Sigmar, D.J. (University of Illinois, Fusion Studies Laboratory, Urbana, IL). *Fusion Technology;* 7: No. 3, 374-390(May 1985).

An alpha-driven fast magnetosonic wave instability is investigated in tokamak plasmas for propagation transverse to the external magnetic field at frequencies several times the alpha gyrorate. A two-dimensional differential quasi-linear diffusion equation is derived in cylindrical v-v geometry. The quasi-linear diffusion coefficients in the small parameter k/k are expanded and the problem is reduced to one dimension by integrating out the v dependence. Reactor relevant information is obtained using data from the one-dimensional formulation in a 1 1/2-dimensional tokamak transport code. Contour plots of the alpha threshold fraction are used to identify the instability regions in the n /sub e/ -T /sub i/ plane. Alpha/background electron fractions as low as 10^{-6} to 10^{-4} may trigger the instability. For a typical reactor-size tokamak, an enhancement of the fraction of the alpha energy transferred to ions by as much as 1.5 can occur for T /sub i/ = T /sub e/ at 7 keV. Still, due to the rapid equilibration of electron and ion temperatures, a <1 to 2% increase in fusion power occurs overall.

31008 **Neutral beam orientation on the Tokamak Fusion Test Reactor.** Mikkelsen, D.R.; Goldston, R.J.; Singer, C.E. (Plasma Physics Laboratory, Princeton University, Princeton, NJ). *Fusion Technology;* 7: No. 3, 361-373(May 1985).

The efficiency of plasma heating and current drive expected in the Tokamak Fusion Test Reactor has been computed for various orientations of neutral injection beamlines. Computer codes that model plasma transport and particle orbits have been used to compute power losses caused by "shinethrough," charge-exchange, intersection of particle orbits with the limiter or wall, and toroidal field ripple, and to compute the effect of finite size particle orbits on penetration of injected beam particles. Less readily quantifiable considerations such as impurity contamination and toroidal plasma rotation are discussed briefly.

31009 **Strategic framework for the magnetic fusion energy program.** Conn, R.W.; Davidson, R.C.; Fowler, T.K.; Furth, H.P.; Gilleland, J.A.; Rosenbluth, M.N. (Univ. of California, Los Angeles). *Journal of Fusion Energy;* 4: No. 1, 5-10(1985).

Fusion is recognized as a sufficiently abundant and environmentally attractive energy source to sustain industrial society in the 21st century and beyond. This paper outlines a strategic framework for the US magnetic fusion program that builds substantially on the high-quality research and the strong scientific and technological basis that has been established during the past two decades. 1 reference.

31010 **Theory of the plasma edge: recycling sheaths.** Whealton, J.H.; Bell, M.A.; Milora, S.L.; Raridon, R.J.; Stirling, W.L.; Tsai, C.C. (Oak Ridge National Lab., Oak Ridge, TN). pp HA-4 of 37th annual gaseous electronics conference. Beatty, E.C. Boulder, CO; University of Colorado (1984). (CONF-841086—).

From 37. gaseous electronics conference; Boulder, CO, USA (9 Oct 1984).

We consider the models for a plasma edge consisting of (a) Vlasov equations for plasma positive ions, in the plasma sheaths near a metal boundary, (b) Vlasov equations for electrons and/or neutrals thus ejected from such surfaces and (c) Vlasov equations for subsequent ionization and dissociation of volume-produced particles. These Vlasov equations are solved simultaneously with Poisson's equation in as many dimensions as desired with boundaries of arbitrary shape and connectivity. These calculations are applied to plasma edge pumps and ion deposition situations to determine pumping efficiency as a function of boundary shape and uniformity of ion deposition on irregular surfaces. This model is highly nonlinear and heretofore unsolvable for problems of this variety.

31011 **Heating and pumping studies in the end cells of tandem-mirror reactors.** Devoto, R.S. (University of California, Lawrence Livermore National Laboratory, Livermore, CA). pp 23-24 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

The end cells of tandem mirrors contain regions where hot ions must be confined and where warm trapped ions must be pumped out. In the current MARS reactor design, hot ions are confined in the plug, where the thermal barrier and axial confinement potential are also located, and in the anchor which lies between the plug and a high-field (24T) choke coil. In this reactor, passing ions which trap must be pumped from the transition section between the high field choke coil and the anchor, and from the plug. Studies of the trapping and loss rates of these ions can be carried out by solution for the ion distribution function. Two specific problems have been addressed with the aid of a numerical code which solves the bounce-average Fokker-Planck equation: pumping of ions trapped in the transition region and confinement of hot ions as well as pumping in the plug. Transition studies have focused on the effect of different locations of charge-exchange pump beams on required current and beam energy. Since the ions which result from charge exchange must pass into the central cell, the beam energy must be high enough to overcome the potential difference to the central cell. To minimize the energy, it is desirable to pump near the mirror, but such a pump beam does not intersect orbits of deeply trapped ions and even with very large beam currents, the distribution function cannot be distorted sufficiently to attain the required trapped density. However, pumping at about half the maximum field is found to be satisfactory and to even reduce the required beam current over cases with uniform pumping.

31012 **Selective heating and separation of isotopes in a metallic plasma.** Moffa, P.; Cheshire, D.; Flanders, B.; Myer, R.; Robinette, W.; Thompson, J.; Young, S. (TRW Energy Research Center, Redondo Beach, CA). pp 69-70 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

Several types of metallic plasmas have been produced at the Plasma Separation Process facility of TRW. Selective heating and separation of specific isotopes in these plasmas have been achieved. In this presentation the authors concentrate on the modeling of the selective heating and separation of the isotope Ni^{58}. Two models are currently used to describe the excitation process. In both, the electromagnetic fields in the plasma produced by the ICRH antenna are calculated self-consistently using a kinetic description of the warm plasma dielectric. In the Process Model Code, both the production of the plasma and the heating are calculated using a Monte Carlo approach. Only the excitation process is treated in the second simplified model. Test particles that sample an initial parallel velocity distribution are launched into the heating region and the equations of motion including collisional damping are calculated. For both models, the perpendicular energy for a number of particles with different initial conditions and representing the different isotopes is calculated. This information is then input into a code that models the performance of our isotope separation collector. The motion of the ions of each isotope through the electrically biased collector is followed. An accounting of where each particle is deposited is kept and hence the isotope separation performance of the collector is predicted.

31013 **Preliminary neutral density measurements in EBT using a diagnostic neutral beam.** Glowienka, J.C.; Davis, W.A.; Swain, D.W. (Oak Ridge National Laboratory, Oak Ridge, TN). pp 24 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

The neutral density of a plasma can be determined by measuring the charge-exchange decay time of an energetic ion population. The neutral density is inversely proportional to the decay time if the dominant loss mechanism is charge exchange. In EBT, a 20 keV, magnetically focussed, low fluence (about 10 mA) neutral hydrogen beam (a SARA** source) is injected perpendicular to the magnetic field in the midplane between magnets. An energetic ion population is trapped in the midplane primarily by charge exchange with cold plasma ions. The beam is repetitively pulsed, and the decay is observed with a conventional charge-exchange energy analyzer. The energetic ion population fills a thin disk-like volume with dimensions defined by the beam diameter (about 1 cm) and the plasma diameter (about 30 cm). However, the origin of the detected signal is highly center weighted. The data show signal-to-noise ratios that are greater than 100 and decays that are well suited to exponential fits. Decay measurements were performed in gas trapping experiments (no ECH) and in plasma trapping experiments in EBT-I and EBT-S using hydrogen and deuterium plasmas. Decay times from gas trapping compare well with predictions of the molecular hydrogen gas density from the toroidal vessel pressure gage and show no saturation with pressure. In contrast, plasma trapping experiments show short decay times that imply neutral atomic hydrogen densities of order 10^{11} cm^{-3} or greater; this is an order of magnitude larger than neutral densities determined by H /sub alpha/ spectroscopy. Plasma trapping experiments also show a saturation at low pressures near the T-M transition.

31014 **Current profile diagnostic development on text using the Zeeman effect.** Thomas, D.M.; Baur, J.F.; Ensberg, E.S.; West, W.P. (GA Technologies Inc., San Diego, CA). pp 13 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

The current density profile diagnostic system has been installed on the TEXT device. The present setup comprises a high-energy (E = 95 keV) neutral ^{6}Li beam, a cw dye laser, and a fluorescence detection system. In principle, the technique under development will permit measurement of the magnetic field direction simultaneously at several discrete points within the tokamak throughout the duration of the discharge. The lithium beam is injected radially into the plasma collinearly with the cw dye laser beam, which is tuned into resonance with the π-component of the lithium Zeeman triplet. The laser light is linearly polarized and passes through an electro-optic crystal ($LiNiO_3$) which rotates the plane of the polarization at 50 kHz. Since the π-component is linearly polarized parallel to the magnetic field, the laser induced fluorescence signal is modulated at 100 kHz. The phase of the fluorescence signal relative to a laser reference signal is directly proportional, to the direction of the magnetic field. The fluorescence of the beam is observed at several points along the radius of the machine; and phasesensitive detection techniques may be used to determine the local field direction at the various observation positions. Since the toroidal component of the magnetic field is known as a function of radius, the poloidal field due to the plasma current may be determined.

31015 **Tokamak plasma density fluctuation studies using a multichannel scattering apparatus.** Park, H.; Luhmann, N.C.; Peebles, W.A.; Taylor, R.J. (University of California, Los Angeles, CA). pp 16-17 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

This paper discusses the development of a multi-angle FIR scattering apparatus used to obtain Tokamak plasma wave dispersion relations on a single shot basis, eliminating the possible ambiguities resulting from variation of plasma parameters. The scattering apparatus was carefully calibrated using acousto-optical techniques as well as standard hot-cold receiver sensitivity procedures. The system has been employed to study two different frequency regimes of density fluctuation - naturally occurring microturbulence and externally driven ICRF waves.

31016 **A photon-counting detector for doppler width ion temperature measurements.** Benjamin, R.; Moos, H.W.; Nudelfuden, A. (The Johns Hopkins University, Baltimore, MD). pp 41-42 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

The three most common methods of determining the ion temperature profile in plasma fusion machines are discussed in this article. The kinetic temperature of the impurity ions can be determined by mesuring the doppler broadening of the emission lines of these impurities, a method which is not hampered as machines get larger and is much less sensitive to deviations from a Maxwellian distribution. The authors are designing and constructing a photon-counting detector for doppler broadening measurements in the ultraviolet spectral region between 1200-3000 angstroms to be used in the determination of ion temperature profiles.

31017 **X-ray spectra for 10 keV less than h v less than 100 keV from the Alcator C tokamak.** Rice, J.E.; Kallne, E.; Kallne, J. (Massachusetts Institute of Technology, Cambridge, MA). pp 55 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

X-ray emission between 10 and 100 keV has been observed from the Alcator C tokamak using a new HgI_2 x-ray detector and pulse-height-analysis system and is discussed in this paper. This spectrometer operates at room temperature and provides access to the intermediate energy portion of x-ray emission between the regions normally viewed by Si(Li) and NaI detectors. Spectra have been obtained during normal high density operation, at lower densi-

ties and for discharges when RF power is introduced into the plasma. Information concerning the electron distribution function obtained from the x-ray spectrum are compared with measurements of electron cyclotron emission.

31018 **Edge turbulence in the PRETEXT Tokamak.** Levinson, S.J.; Beall, J.M.; Bengtson, R.D.; Powers, E.J. (University of Texas at Austin, Austin, TX). pp 54-55 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

This article examines how the application of a fixed-Langmuir probe dignostic for the investigation of turbulence allows the estimation of a local wavenumber-frequency spectral density function in the edge region of the PRETEXT Tokamak. The technique offers a complementary alternative to scattering diagnostics in that the probes provide a highly localized measurement with good poloidal wave-number resolution. In addition, the entire spectral density function may be estimated from a single shot data.

31019 **Transverse electric fields inferred from electron losses and ion beam dynamics in a Magnetically Insulated Diode.** Maron, Y.; Hammer, D.A.; Litwin, C. (Cornell University, Ithaca, NY). pp 33 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

Electron losses and ion beam divergence were studied locally and simultaneously in the LONGSHOT Magnetically Insulated Diode (MID), an angular MID with radial insulation field, circa 100 kV applied field and a circa 600 ns pulse. The correlation between observations of these two phenomena allows a better understanding of the sources of ion beam divergence and its relation with the electron flux to the anode. In this paper, the observations are briefly summarized and conclusions are presented as to the electrostatic potential configurations which must be present near the anode to produce the observed phenomena. The ion beam divergence from the LONGSHOT diode was measured by allowing a portion of the ion beam to pass through a 1.4 cm diameter aperture and to hit a scintillator which was photographed with a streak camera.

31020 **Theoretical modeling of the plasma opening switch.** Ottinger, P.F.; Goldstein, S.A.; McDonald, S.; Meger, R.A. (Naval Research Laboratory, Washington, DC). pp 34 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

Recent experiments at NRL have demonstrated that plasma can be used as the switching medium in a fast opening switch. Pulsed power applications for such switches are manyfold, including propulse suppression, risetime sharpening, inductive storage and pulse compression. Each application requires individual attention to geometry, plasma parameters, timescales, etc. Theoretical modeling of the basic physical mechanisms involved in the opening process are described. Emphasis is placed on relating the model to new experiments at NRL. The theoretical model includes effects due to injected plasma drift motion, surface erosion and the self-consistent magnetic field.

31021 **The source of heavy impurities in the Alcator C Tokamak.** Rice, J.E.; Marmar, E.S. (Massachusetts Institute of Technology, Cambridge, MA). pp 55-56 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

An anomalous impurity diffusion coefficient has been determined from a series of impurity injection experiments performed on the Alcator C Tokamak. An impurity transport code, which includes this empirical diffusion coefficient, has been used to model intrinsic impurity emission. Comparison of the code predictions with observations of intrinsic molybdenum, chlorine and sulphur emission provides information about the source of these impurities. A variety of scalings of the emission of molybdenum have been documented.

Abstracts Only.

Loop antennaes have been used to make time and frequency resolved measurements of radiation emitted from the ELMO Bumpy Torus (EBT) in the 1-30 GHz range. Both cw and burst oscillations have been observed over the range of 1-10 GHz (0.035-0.35 ω /sub ce/) when EBT is operated in the T-mode regime. These oscillations increase in amplitude as the fill pressure is reduced to the T-M transistion. The cw oscillations are observed at approximately 1.5, 2.4 and 6.7 GHz. These oscillations have little or no frequency dependence on fill pressure, magnetic field strength or the heating microwave power level or frequency. The burst type oscillations are observed in the ranges of 2-4 GHz and 6-8 GHz. The time between consecutive burst can be as fast as a couple of milliseconds. The frequency and amplitude dependence of these bursts have been measured as a function of fill pressure, magnetic field strength and heating frequency. The bursts could be associated with Whistler activity due to temperature anisotropy of the hot electron rings. A more thorough investigation of both types of oscillations and their effects, if any, on the EBT plasma is currently underway.

31023 **Electric and magnetic excitation of ICRF waves: eigenmodes and wave packets.** Greene, G.J.; Gould, R.W. (California Institute of Technology, Pasadena, CA). pp 18 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

Abstracts Only.

Excitation of waves in the ion cyclotron range of frequencies has been investigated for a variety of antennas in the Caltech Research Tokamak. Two approaches were used to characterize the antenna-plasma interaction: measurements of the antenna RF input impedance, and amplitude and phase measurements of the magnetic fields associated with the waves. Both continuous excitation (leading to toroidal eigenmodes) and tone-burst excitation (launching wave-packets) were employed. Small antenna structures were mounted on the end of a 1-meter coaxial RF feeder section which also formed the vacuum feedthru. Magnetic loop-antenna structures investigated included bare loops, ceramic-insulated loops, and baffled and Faraday-shielded loops. Electric-field antennas included bare plates, insulated plates, T-shaped rods, and small cylinders and were driven with respect to the chamber wall. The antenna loading impedance was obtained directly by measuring the RF current and voltage and the phase between the two at the input to the RF feeder section. This approach has the advantage that the measurements are made on the antenna side of the matching network and are thus independent of its setting. The I-V phase change during the plasma shot is often quite small and requires a high-sensitivity, low-noise phase detector.

(Oak Ridge National Lab., TN (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1986. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010018.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The rf technology program at the Oak Ridge National Laboratory (ORNL) is developing the components needed for heating in the ion cyclotron range of frequencies (ICRF) on future fusion machines, such as the Compact Ignition Tokamak. Components produced in this program are already in use on experiments throughout the world, including Doublet III-D (DIII-D), TMX-U, Alcator-C, and TEXTOR. Designs have been developed for implementation on Tore Supra and ASDEX. Recent developments in vacuum feedthroughs, compact loop antennas, high-current capacitors, and folded waveguides are discussed in this paper.

31027 **(CONF-860412—6) Folded waveguide cavity coupler for ICRF heating.** Owens, T.L. (McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1986. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010022.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

This paper introduces a new type of waveguide coupler for ion cyclotron range of frequencies (ICRF) heating which is an adaptation of a concept known as a "folded waveguide" reported by Barrow and Schaevitz in connection with low-frequency waveguide transmission systems. The basic idea involves "folding" a simple rectangular waveguide to form a more compact structure. Cutoff for the folded waveguide occurs when one-half of a free-space wavelength equals the path length around the "folds" of the structure. By adding a large number of folds, the path length around the folds can be made large, leading to very low cutoff frequencies relative to those for simple rectangular waveguides having comparable outside dimensions. Folded waveguide couplers are practical for frequencies as low as 60 MHz for some ports found on present-day experients.

31028 **(CONF-860412—8) ICRH coupling in DIII-D.** Hoffman, D.J.; Baity, F.W.; Bryan, W.E.; Jaeger, E.F.; Owens, T.L.; Remsen, D.B.; Luxon, J.; Rawls, J.M. From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

A 9-MW ion cyclotron resonant frequency (ICRF) experiment has been proposed to heat the Doublet III-D (DIII-D) plasma. DIII-D is a 2.2-T, 3.5-MA tokamak at GA Technologies with a major radius of 1.67 m and minor radius of 67 cm (elongation ~2). The device was recommissioned in early 1986. The initial experimental program includes ohmic plasma and neutral beam studies; high-power rf experiments will follow in later years. Compact loop antennas (which fit completely in a 35- by 50-cm port) have been chosen to convey this power because of their inherent ease of maintenance, high efficiency, and versatility. In order to verify that the antenna will have sufficient loading, a prototype low-power (2-MW) antenna has been designed and installed. Measurements will be made through September 1986. The antenna is a cavity antenna that will operate from approximately 30 to 80 MHz with a 50-Ω match for a load resistance of ~1 Ω. It is surrounded by a fixed graphite-covered frame and can be extended from 3 cm behind this frame to 2 cm in front. This can be used to adjust coupling to the plasma. The electrical, mechanical, and thermal characteristics of this antenna system (and its extrapolation to ignited tokamaks) are discussed. In addition to experimental exploration of coupling, we have investigated wave propagation and absorption in DIII-D by using a cold collisional plasma model in straight tokamak geometry with rotation transform. Loading and power deposition profiles as a function of frequency, density, and species mix are presented.

31029 **(CONF-860610—19) System studies of compact ignition tokamaks.** Galambos, J.D.; Peng, Y.K.M.; Blackfield, D.T. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007302.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

A new version of the FEDC Tokamak System Code (TSC) has been developed to analyze the Compact Ignition Tokamak (CIT). These proposed experiments have small (major radius F 1.5m) and high magnetic fields (B J 10T), and are characterized by reduced cost. Key design constraints of CIT include limits to the high stress levels in the magnetic coils, limits to the large temperature rises in the coils and on the first wall or divertor plate, minimizing power supply requirements, and assuring adequate plasma performance in fusion ignition and burn time consistent with the latest physics understanding. We present systems code level studies of CIT parameter space here for a range of design options with various design constraints. The present version of the TSC incorporates new models for key components of CIT. For example, new algorithms have been incorporated for calculating stress levels in the TFC and ohmic solenoid, temperature rise in the magnetic coils, peak power requirements, plasma MHD equilibrium and volt-second capability. The code also incorporates a numerical optimizer to find combinations of engineering quantities (device size, coil sizes, coil current densities etc.) and physics quantities (plasma density temperature, and beta, etc.) which satisfy all the constraints and can minimize or maximize a figure of merit (e.g., the major radius). This method was recently used in a mirror reactor system code (3) for the Minimara concept development.

31030 **(CONF-860610—20) Configuration development and structural assessment of the FEDC ignitor concept.** Brown, T.G.; Lee, V.D.; Mayhall, J. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 3p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007303.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

Emphasis has been placed on the configuration design of the reactor core module and the external, hydraulic preload system. An elevation view of the FEDC Ignitor concept highlighting the reactor core and the external preload system is shown. The reactor core was designed to allow the fit-up of the toroidal field (TF) coils to meet the requirements of TF wedging, bucking (or the combination of both). The TF coil outboard leg was sized to carry its own in-plane loads; the inboard TF leg was sized to carry the residual tension load (after subtracting preload) plus the wedging/bucking loads. Preload is applied directly to the inboard leg at the top of the device, through an insulation compression block. The outboard half of the TF coil is enclosed in a steel case to support out-of-plane loads. In-plane gaps between the coil and case allow in-plane expansion due to thermal and mechanical loads.

31031 (CONF-860610—22) **Maintainability features of the compact ignition tokamak.** Spampinato, P.T.; Bushnell, C.W. (Oak Ridge National Lab., TN (USA); Princeton Univ., NJ (USA). Plasma Physics Lab.). 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007332.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

The Compact Ignition Tokamak (CIT) is a deuterium-tritium (D-T) device envisaged to be the next experimental reactor in the US Fusion Program. The reactor will initially operate in a nonactivated hydrogen phase for approximately two years. This will permit verification of the integrity of the total system and allow hands-on repair to equipment which has experienced shakedown and early operation failures. Once D-T operations commence, reactor maintenance will require remote handling techniques. An evaluation has been completed to determine what maintenance operations must be performed on the CIT. A maintenance philosophy has been developed which is based upon the use of manipulator systems and robotics in the test cell. Replacement of life-limited equipment will be accomplished using a modular design approach for components, with simple remotely operable interfaces. Examples of operations to be done remotely include: (1) replacing of rf antennae and Faraday shields, (2) uncoupling diagnostic and fueling penetrations, (3) removing of all port covers, and (4) replacing first wall armor tiles, optical mirrors, and vacuum windows.

31032 (CONF-860652—3) **US/JAERI calculational benchmarks for nuclear data and codes intercomparison. Article 8.** Youssef, M.Z.; Jung, J.; Sawan, M.E.; Nakagawa, M.; Mori, T.; Kosako, K. (California Univ., Los Angeles (USA). School of Engineering and Applied Science; Argonne National Lab., IL (USA); Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering; Japan Atomic Energy Research Inst., Tokai, Ibaraki). Jan 1986. Contract AS03-84ER52103;FG03-86ER52124. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009484.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

Prior to analyzing the integral experiments performed at the FNS facility at JAERI, both US and JAERI's analysts have agreed upon four calculational benchmark problems proposed by JAERI to intercompare results based on various codes and data base used independently by both countries. To compare codes the same data base is used (ENDF/B-IV). To compare nuclear data libraries, common codes were applied. Some of the benchmarks chosen were geometrically simple and consisted of a single material to clearly identify sources of discrepancies and thus help in analysing the integral experiments.

31033 (CONF-860652—4) **Analysis and intercomparison of Phase I experiments at FNS. Article 9.** Youssef, M.; Gung, C.; Jung, J.; Abdou, M.; Nakagawa, M. (California Univ., Los Angeles (USA). Dept. of Mechanical, Aerospace and Nuclear Engineering; Japan Atomic Energy Research Inst., Tokai, Ibaraki). Jan 1986. Contract AS03-84ER52103;FG03-86ER52124. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009482.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

Phase I integral experiments of US/JAERI Collaborative Program on Fusion Breeder Neutronics which were carried out at the Fusion Neutron Source (FNS) facility at JAERI ranged from a D-T neutron source characterization experiment, tritium production rate (TPR) measurements in a reference Li_2O assembly, first wall experiments with and without coolant stimulation and beryllium neutron multiplier experiments in various configurations. Phase II experiments for the program (not reported here) are planned to be carried out during FY/86-87 where the system specifications (geometrical arrangement, material selection, etc.) are chosen to give closer situation to the fusion reactor environment (spectra). Both US and JAERI have independently analyzed Phase I experiments using their own data base and codes. Analytical predictions obtained by both countries were compared to measured values. The main objective of the intercomparison is to determine the accuracy, guide the development and establish the validity of present computational methods and nuclear data base in predicting key fusion blanket design parameters (e.g., TPR, heating rate, etc.) and to evaluate the overall uncertainties (both analytical and experimental) associated with these parameters.

31034 (DOE/ER—0045/13, pp 161-169) **Microstructural examination of several commercial alloys neutron irradiated to 100 dpa.** Gelles, D.S. (Westinghouse Hanford Co., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Microstructural examination of ferritic and austenitic commercial alloys neutron irradiated to ~100 dpa confirms that ferritic alloys are very low swelling but precipitate development can be very complex. Austenitic alloys can be very high swelling but no clearly defined microstructural differences could be found between two alloys of similar composition but very different swelling response or between alloys of very different composition but with similar swelling. Differences are ascribed to differences in the onset of swelling. 5 references, 4 figures, 2 tables.

31035 (DOE/ER—0045/13, pp 171-182) **Response of selected high strength high conductivity copper alloys to simulated fusion irradiation and temperature conditions.** Spitznagel, J.A.; Davis, J.W. (Univ. of Pittsburgh, PA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Microstructural changes are reported for a solid solution cold work strengthened alloy (AMZIRC), a precipitation strengthened alloy (Be-Cu) and a dispersion hardened alloy (Al-60) after dual ion irradiation at fluences to ~5 dpa at 450°C and 500°C. The Amzirc and Al-60 alloys are from the same heats being examined by LANL in a EBR-II neutron irradiation program. Void swelling at a level of ~1-5% per dpa is observed in selected areas of the Amzirc alloy that have experienced texture-dependent recovery by dislocation annihilation and rearrangement. Coarsening of the G.P. zones and accelerated precipitate growth are observed in the INESCO supplied Be-Cu alloy. The mechanically alloyed Al-60 is stable and the misfit strains at the interfaces between the Al_2O_3 particles and the Cu matrix are retained. These results are used to extend a proposed test matrix and to suggest (preliminary) alloy modifications for future neutron-irradiation experiments. 14 references, 12 figures, 5 tables.

31036 (DOE/ER—0045/13, pp 183-187) **Effects of neutron irradiation at 450°C and 16 dpa on the properties of various commercial copper alloys.** Brager, H.R.; Heinisch, H.L.; Garner, F.A. (Hanford Engineering Development Lab., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

High-purity copper and eight copper alloys were irradiated to ~16 dpa at ~450°C in the MOTA experiment in FFTF. These alloys were also examined after aging at 400°C for 1000 hours. The radiation-induced changes in the electrical conductivity, tensile properties, and density were measured and compared to those of the aged materials. The changes in conductivity can be either positive or negative depending on the alloy. Changes in tensile properties of most, but not all, of the alloys seem to be primarily dependent on thermal effects rather than the effect of atomic displacements. Radiation at 450°C induced changes in density varying from 0.66% densification to 16.6% swelling. The latter occurred in Cu-O.1% Ag and implies a swelling rate of at least 1%/dpa. 6 references, 3 figures, 2 tables.

31037 (DOE/ER—0045/13, pp 189-195) **Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium.** Tortorelli, P.F.; DeVan, J.H. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The purpose of this task is to determine the corrosion resistance of candidate first-wall materials to slowly flowing lithium in

the presence of a temperature gradient. Corrosion and deposition rates are measured as functions of time, temperature, additions to the lithium, and flow conditions. These measurements are combined with chemical and metallographic examinations of specimen surfaces to establish the mechanisms and rate-controlling processes for dissolution and deposition reactions. Manganese-containing steels (15-30 wt %) experienced substantial corrosion when exposed to thermally convective lithium at 500°C with the 30 wt % Mn steels showing unacceptably high corrosion losses. The mass transfer of 12 Cr-1 MoVW steel at 600°C in lithium was significantly less than that of type 316 stainless steel exposed under similar conditions. 10 references, 8 figures, 1 table.

31038 (DOE/ER—0045/13, pp 196-199) **Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li.** Tortorelli, P.F.; DeVan, J.H. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The purpose of this task is to determine the corrosion resistance of candidate first-wall materials to slowly flowing Pb-17 at. % Li in the presence of a temperature gradient. Dissolution and deposition rates are measured as functions of time, temperature, and additions to the lead-lithium. These measurements are combined with chemical and metallographic examinations of specimen surfaces to establish the mechanisms and rate-controlling processes for the dissolution and deposition reactions. Type 316 stainless steel and 12 Cr-1 MoVW steel were exposed to Pb-17 at. % Li for about 2000 h at 500°C. Type 316 stainless steel was severely corroded with deep penetration of the alloy by lead-lithium. The 12 Cr-1 MoVW steel did not suffer penetration and corroded uniformly. 5 references, 4 figures.

31039 (DOE/ER—0045/13, pp 200-204) **Environmental effects on properties of structural alloys in flowing lithium.** Chopra, O.K.; Smith, D.L. (Argonne National Lab., IL). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Data on the surface composition of Type 316 stainless steel exposed to lithium under various conditions of time, temperature, and nitrogen content in lithium are presented. The results indicate that the depletion of chromium from the steel depends on the exposure conditions. The depletion of nickel is rapid and independent of temperature and lithium purity. 7 references, 3 figures, 2 tables.

31040 (DOE/ER—0045/13, pp 205-208) **Compatibility of Li_2O in a flowing helium environment.** Chopra, O.K.; Smith, D.L. (Argonne National Lab., IL). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The objective of this task is to evaluate the compatibility of solid breeder materials with structural alloys in a flowing helium environment. The interactions between breeder material, alloys, and gas are investigated as a function of temperature, time, and environmental parameters (e.g., different H_2O and H_2 contents in helium). Reaction rates are determined by measuring the weight change of the breeder material with the alloys as well as the thickness of the reaction scales on the alloys. These measurements, coupled with metallographic evaluation of the alloy surfaces, are used to establish the mechanisms and rate-controlling processes for the corrosion reactions. Sintered Li_2O pellets exposed to flowing helium containing 1 ppm each of H_2O and H_2 show weight losses at 550 and 650°C and a weight gain at 450°C. The rates of weight loss are ~3 orders of magnitude greater than those predicted from equilibrium reaction kinetics. 6 references, 1 figure, 1 table.

31041 (DOE/ER—0045/13, pp 209-213) **Environmental effects on the properties of vanadium-base alloys.** Diercks, D.R.; Smith, D.L. (Argonne National Lab., IL). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Exposures of V-15Cr-5Ti, V-20Ti, and VANSTAR-7 specimens for 2000 h to pressurized flowing water containing 4 ppm dissolved O_2 at 288°C have been completed. Both the V-20Ti and VANSTAR-7 alloys formed nonadherent and nonprotective corrosion products, and both alloys exhibited relatively high corrosion rates. The V-15Cr-5Ti alloy formed a thin adherent film, and its corrosion rate was more than two orders of magnitude lower. Further results obtained in a scanning Auger microprobe study of sulfur segregation in vanadium-base alloys indicate that the extent of intergranular segregation varies markedly with different heats of material. 1 reference, 4 figures, 1 table.

31042 (DOE/ER—0045/13, pp 214-216) **Stress corrosion cracking of PCA - initial considerations and characterization of grain boundary precipitation.** Tortorelli, P.F. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

According to a thermodynamic model of intergranular stress corrosion cracking, Path A Prime Candidate Alloy is predicted to have about the same cracking susceptibility as type 316 stainless steel. However, microstructural manipulation of the PCA alloy may allow improvement in the resistance to sensitization and, therefore, to intergranular stress corrosion cracking. 4 references, 1 figure, 1 table.

31043 (DOE/ER—0045/13, pp 18-19) **Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments.** Lillie, R.A. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The objective of this work is to provide the neutronic design for materials irradiation experiments in the Oak Ridge Research Reactor (ORR). Spectral tailoring to control the fast and thermal fluxes is required to provide the desired displacement and helium production rates in alloys containing nickel. The calculated fluences from the ongoing three-dimensional neutronics calculations are being scaled to agree with experimental data. As of September 30, 1984, this treatment yields 176.2 at. ppm He (not including 2.0 at. ppm He from ^{10}B) and 11.90 dpa for type 316 stainless steel in ORR-MFE-4A and 133.0 at. ppm He and 9.13 dpa in ORR-MFE-4B. 2 references, 2 figures, 1 table.

31044 (DOE/ER—0045/13, pp 20) **Operation of the ORR spectral tailoring experiments (ORR-MFE-4A and ORB-MFE-4B).** Conlin, J.A.; Dudley, I.T. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Experiments ORR-MFE-4A and -4B, which irradiate austenitic stainless steel, use neutron spectral tailoring to achieve the same helium-to-displacement-per-atom (He/dpa) ratio as predicted for fusion reactor first-wall service. Experiment ORR-MFE-4A contains mainly type 316 stainless steel and Path A Prime Candidate Alloy (PCA) and Experiment ORR-MFE-4B similar materials. The specimens contained in the ORR-MFE-4A experiment operated for an equivalent of 986 d at 30 MW reactor power, with temperatures of 400 and 330°C. The specimens contained in the ORR-MFE-4B experiment operated for an equivalent of 787 d at 30 MW reactor power, with temperatures of 500 and 600°C. 8 references.

31045 (DOE/ER—0045/13, pp 21-40) **FFTF fusion irradiations - FFTF cycles 4-6.** Ermi, A.M. (Westinghouse Hanford Co., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Specimens were prepared and loaded into three in-core canisters of the Materials Open Test Assembly (MOTA) for irradiation during FFTF cycle 4 (January-April 1984). Irradiations were conducted at 407°C (6-11 dpa), 518°C (14-16 dpa) and 595°C (14-16 dpa). Alloys emphasized in this initial irradiation were the Path E

ferritic alloys HT-9 and 9Cr-1Mo, and the Path C vanadium alloys. These specimens were either discharged or reinserted into new MOTA hardware for irradiation during FFTF cycles 5-6 (June 1984-June 1985). New specimens were also included, and additional irradiation volume both in-core and below-core was available for an expanded test matrix. Irradiation are currently underway during cycles 5-6 at 365°C (below-core: 4-7 dpa), at 425, 520 and 600°C (all 25-28 dpa) and 600°C (8-14 dpa). Additional emphasis on low activation alloys was given for this irradiation. Specimens in the peak flux positions during cycles 4-6 will accumulate approximately 45 dpa. 3 references, 1 figure, 13 tables.

31046 (DOE/ER—0045/13, pp 41-44) **Test matrices for irradiation of Path A Prime Candidate and developmental alloys in FFTF.** Maziasz, P.J. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

These irradiations are generally intended to evaluate the void swelling resistance of the Path A Prime Candidate Alloy (PCA) at high fluence (>100 dpa) relative to 20%-cold-worked type 316 after side-by-side irradiation in the Fast Flux Test Facility (FFTF), as well as to evaluate the improvements achieved by additional minor compositional variations of the PCA. Further, these irradiations also serve as a low helium base line against which to gage more accurately the effects of higher helium generation for similar irradiation of exactly the same alloys in the High Flux Isotope Reactor (HFIR). An initial set of transmission electron microscopy (TEM) disk specimens was assembled for irradiation at approximately 420, 520, and 600°C to fluences of approximately 15, 45, and 75 dpa. Some TEM specimens were discharged at approximately 9.5 to 15.6 dpa at all temperatures, and additional specimens were then reloaded to achieve fluences well beyond 100 dpa. Tensile specimens were also included in the reload for irradiation in an above-core position at approximately 600°C. The general goals of the experiments are outlined and detailed specimen loadings are described. 9 references, 4 tables.

31047 (DOE/ER—0045/13, pp 45-49) **Reirradiation in FFTF of swelling-resistant Path A alloys previously irradiated in HFIR.** Maziasz, P.J. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Disks of Path A Prime Candidate Alloys (in several pretreatment conditions) and several heats of cold-worked (CW) type 316 and D9 type austenitic stainless steels have been irradiated in HFIR at 300, 500, and 600°C to fluences producing about 10 to 44 dpa and 450 to 3600 at. ppm He. These samples are being reirradiated in the Materials Open Test Assembly (MOTA) in FFTF at 500 and 600°C, together (side by side) with previously unirradiated disks of exactly the same materials, to greater than 100 dpa. These samples many of which have either very fine helium cluster or helium bubble distributions after HFIR irradiation, are intended to test the possibility and magnitude of a helium-induced extension of the initial low-swelling transient regime relative to the void swelling behavior normally found during FFTF irradiation. Further, these samples will reveal the microstructural stability or evolution differences that correlate with such helium effects. 17 references, 4 tables.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Specimens of the Path A Prime Candidate Alloys and of N-lot SS 316 were irradiated in HFIR at 400 to 600°C to fluences producing approximately 10 to 44 dpa and 500 to 3600 at. ppm He, in both the solution annealed and 20 to 25% cold-worked conditions. The cavity swelling and total microstructural evolution of most samples were observed via transmission electron microscopy on identical disks irradiated side by side in HFIR, and immersion densities were also measured prior to insertion into FFTF/MOTA (Materials Open Test Assembly of the Fast Flux Test Facility). These disks are being irradiated in the FFTF/MOTA (cycles 5 and 6), side by side with disks of the same materials which were not previously irradiated in HFIR. These specimens have been divided into two subsets for discharges after 30 and 60 dpa. 4 references, 1 table.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Three miniature sheet-type tensile specimens and a miniature rod-type specimen are being used to determine irradiated tensile properties for alloy development for fusion reactors. The tensile properties of type 316 stainless steel were determined with these different specimens, and the results were compared. Reasonably good agreement was observed. However, there were differences that led to recommendations on which specimens are preferred. 4 references, 9 figures, 6 tables.

The goal of this experiment is to determine the effect of neutron irradiation on the tensile properties and microstructure (including swelling behavior) of vanadium alloys. Vanadium specimens of V-15Cr-5Ti, VANSTAR-7, V-3Ti-1Si, and V-20Ti are being irradiated in the FFTF-MOTA experiment. Miniature sheet tensile specimens and transmission electron microscopy (TEM) disks were preimplanted with ^{3}He to levels up to 480 at. ppm using the tritium trick and encapsulated in TZM capsules containing ^{7}Li. The specimens will be irradiated to damage levels up to 165 dpa with irradiation temperatures of 420, 520, and 600°C. All of the capsules at 600°C underwent a temperature excursion during their initial cycle and had to be replaced. 2 references, 1 figure, 3 tables.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The experiments in the US/Japan collaborative testing program for High Flux Isotope Reactor (HFIR) and Oak Ridge Research Reactor (ORR) irradiate austenitic stainless steel candidate alloys for use as first-wall and blanket structural materials in fusion reactors. They will be irradiated with mixed-spectrum neutrons and with spectral tailoring to achieve helium-to-displacement-per-atom (He/dpa) ratios predicted for fusion reactor service. The assembly of all eight capsules, HFIR JP-1 through JP-8, was completed, and they are now being irradiated. The parts fabrication assembly and flow testing of the prototype ORR capsules for 60°C and 200°C

MFE6-J were completed and the capsule was inserted in the ORR. Performance was satisfactory in all respects. 1 reference, 1 figure.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

During the operation of a fusion reactor, the structural material of the first wall and blanket structure will become highly radioactive from activation by the fusion neutrons. Disposal of this material after the service lifetime will be a difficult radioactive waste management problem. One way to minimize the disposal problem is to use structural materials in which radioactive isotopes induced by irradiation decay quickly to levels that allow simplified disposal techniques. The feasibility of developing such austenitic stainless steels is being assessed. A program was started to develop austenitic steels for fusion reactors in which the induced radioactivity decays to low levels in a reasonable time. Ten small button heats of Fe-Cr-Mn-C alloys were melted, cast, and rolled. After various heat treatments, optical microscopy studies and magnetic measurements were used to assess the microstructural constituents present. 6 references, 6 figures, 5 tables.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

It appears that titanium additions to stainless steels covering a wide compositional range around the specifications of AISI 316 results only in an increased delay period before neutron-induced void swelling proceeds. Once swelling is initiated the post-transient behavior of both annealed and cold-worked titanium-modified steels is quite consistent with that of AISI 316, approaching a relatively temperature-independent swelling rate of ~1% per dpa. 14 references, 5 figures.

31055 (DOE/ER—0045/13, pp 81-82) **Swelling of Fe-Cr-Mn ternary alloys in FFTF.** Brager, H.R.; Garner, F.A. (Hanford Engineering Development Lab., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The object of this effort is to determine those factors that control the swelling of alloy systems that have the potential for reduced activation. The swelling of eight simple Fe-Mn binary and Fe-Cr-Mn ternary alloys was measured by an immersion density technique after irradiation at ~520°C to 3.2 x 10^{22} n/cm², E > 0.1 MeV, or ~15 dpa. The swelling of these alloys decreases with manganese but exhibits a dependence on manganese content that is weaker than that of nickel in Fe-Cr-Ni alloys. The dependence on chromium is even weaker, in sharp contrast to the behavior observed in Fe-Cr-Ni alloys. The addition of other solutes also decreases the swelling. 2 references, 2 figures, 1 table.

31056 (DOE/ER—0045/13, pp 85-90) **Solute segregation and void formation in ion-irradiated vanadium-base alloys.** Loomis, B.A.; Smith, D.L. (Argonne National Lab., IL). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The radiation-induced segregation of solute atoms in the V-15Cr-5Ti alloys was determined after either single- dual-, or helium implantation followed by single-ion irradiation at 725°C to radiation damage levels ranging from 103 to 169 dpa. Also, the effect of irradiation temperature (600-750°C) on the microstructure in the V-15Cr-5Ti alloy was determined after single-ion irradiation to 200 and 300 dpa. The solute segregation results for the single- and dual-ion irradiated alloy showed that the simultaneous production of irradiation damage and deposition of helium resulted in enhanced depletion of Cr solute and enrichment of Ti, C and S solute in the near-surface layers of irradiated specimens. The observations of the irradiation-damaged microstructures in V-15Cr-5Ti specimens showed an absence of voids for irradiations of the alloy at 600-750°C to 200 dpa and at 725°C to 300 dpa. The principle effect on the microstructure of these irradiations was to induce the formation of a high density of disc-like precipitates in the vicinity of grain boundaries and intrinsic precipitates and on the dislocation structure. 8 references, 4 figures.

31057 (DOE/ER—0045/13, pp 91-94) **Radiation effects in vanadium alloys in fusion reactor environments.** Kumar, A.; Mattas, R.F. (Argonne National Lab., IL). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The objective of this work is to provide guidance on the applicability of vanadium-base alloys for structural components in a fusion reactor. The swelling behavior of neutron irradiated vanadium was modeled to establish the theoretical limits for swelling. Void and dislocation sink strengths along with the net bias factors for vacancies and interstitials were calculated. These factors were combined to predict the maximum steady state swelling rate. The maximum rate is predicted to be about 0.2%/dpa, which is close to the value calculated for ferritic steels and about a factor of seven lower than for austenitic stainless steels. This value is also consistent with the limited irradiation data for vanadium. 11 references, 1 table.

31058 (DOE/ER—0045/13, pp 95-98) **Effect of helium on the tensile properties of several vanadium alloys.** Braski, D.N. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

Specimens of three vanadium alloys were implanted with different levels of ^{3}He using the tritium trick and subsequently tensile tested at elevated temperatures. The V-15Cr-5Ti and V-3Ti-1Si specimens were embrittled by ^{3}He at a level of 150 at. ppm while the VANSTAR-7 specimens were not. The embrittlement appeared to be caused by extensive ^{3}He bubble networks and possibly precipitate particles on the grain boundaries; hopefully the bubble distribution can be changed (for better simulation) by altering parameters of the tritium trick. The results of the investigation also show that the embrittlement resistance of vanadium alloys can be improved by adjustment of their composition and/or microstructure. 1 reference, 4 figures, 1 table.

31059 (DOE/ER—0045/13, pp 99-103) **Tensile properties of helium-injected V-15Cr-5Ti after irradiation in EBR-II.** Grossbeck, M.L.; Horak, J.A. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Miniature specimens of V-15Cr-5Ti were prepared in the annealed condition and with 10, 20, and 30% cold work. The annealed specimens were cyclotron injected with helium and irradiated in sodium in EBR-II. The cold-worked specimens were irradiated in EBR-II but not helium injected. The specimens were irradiated at 400, 525, 625, and 700°C and received a fluence of 4.1 to 5.5 x 10^{26} neutrons/m² (E > 0.1 meV). Tensile testing revealed very significant embrittlement as a result of the neutron irradiation but a much smaller change, mostly at 400°C, resulting from helium injection. 5 references, 9 figures, 2 tables.

31060 (DOE/ER—0045/13, pp 106-119) **Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22}n/cm².** Hu, W.L. (Westinghouse Hanford Co., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Charpy impact tests on specimens in the AD-2 reconstitution experiment were completed. One hundred ten specimens made of HT-9 base metal, 9Cr-1Mo base metal and 9Cr-1Mo weldment at various heat treatment conditions were tested in temperature range from -73°C to 260°C. The specimens were irradiated from 390°C

to 550°C and the fluence of the specimens reached 6 x 10^{22} n/cm^2. This is the first time that the transition behavior of ferritic alloys at high fluence was obtained. This is also the first time that comprehensive results on the irradiated 9Cr-1Mo weldment are available. The test results show a small additional shift in transition temperature for HT-9 base metal irradiated at 390°C and 450°C as the fluence was raised to 6 x 10^{22} n/cm^2. At higher irradiation temperatures, however, the shift in transition temperature is less conclusive. Further reduction in USE was observed at higher fluence for all the irradiation temperatures. There is no apparent fluence effect for 9Cr-1Mo base metal at all the irradiation temperatures studied. Contrary to the previous finding on HT-9 base metal and weldment, the 9Cr-1Mo weldment shows a higher transition temperature (+ 60°C) and a higher USE (+ 100%) as compared to the 9Cr-1MO base metal for the same irradiation conditions. 6 references, 7 figures, 7 tables.

31061 (DOE/ER—0045/13, pp 120-127) **Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects.** Corwin, W.R.; Vitek, J.M.; Klueh, R.L. In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The objectives of this study are to provide information on the radiation-induced degradation of impact properties of high chromium ferritic steels at moderate irradiation doses. It concurrently examines the viability of simulating helium effects in these engineering alloys by adding nickel and irradiation in a mixed spectrum reactor. Impact testing was completed on aged and EBR-II irradiated 9 Cr-1 MoVNb and 12 Cr-1 MoVW steels, each with and without small additions of nickel. Only limited property changes resulted from aging or irradiating to 12 dpa in the temperature range of 450°C to 550°C. Irradiation of the 12 Cr-1 MoVW at 390°C with and without nickel produced severe degradation of impact properties. Nickel additions affected the unirradiated material properties, but subsequent radiation-induced changes were similar regardless of nickel content. 7 references, 12 figures, 4 tables.

31062 (DOE/ER—0045/13, pp 128-140) **Effects of irradiation on low activation ferritic alloys.** Gelles, D.S.; Hamilton, M.L. (Hanford Engineering Development Lab., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

A series of low activation ferritic alloys was designed, fabricated, irradiated in MOTA 1B, and tested and examined following irradiation. The series consists of alloys similar to 2-1/4Cr-1Mo with vanadium substituted for molybdenum, alloys similar to 9Cr-1Mo with tungsten and/or vanadium substituted for molybdenum and alloys similar to HT-9 with tungsten and/or vanadium substituted for molybdenum. The results demonstrate that low-activation alloys can be successfully produced in the ferritic alloy class. The 2-1/4Cr-V alloys developed excessive irradiation hardening due to precipitation following irradiation at 420°C and the 2-1/4Cr-V and 9Cr-V/W alloys developed excessive softening due to precipitate coarsening and dislocation recovery following irradiation at 585°C. In comparison, the 12Cr-W-V alloy appears to have excellent properties; α' precipitation at 420°C in-reactor did not significantly increase strength and reasonable strength was maintained after irradiation at 585°C probably in part due to intermetallic precipitate development. 11 references, 7 figures, 3 tables.

31063 (DOE/ER—0045/13, pp 141-146) **Development of ferritic steels for fast induced-radioactivity decay.** Klueh, R.L.; Vitek, J.M. (Oak Ridge National Lab., TN). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Tempering studies were conducted on eight heats of normalized chromium-tungsten steel that contained variations in the composition of chromium, tungsten, vanadium, and tantalum. Hardness measurements and optical metallographic observations were used to determine alloying effects on tempering resistance between 650 to 780°C. The results were compared to results for analogous chromium-molybdenum steels. 6 references, 6 figures, 1 table.

31064 (DOE/ER—0045/13, pp 147-151) **Rapid solidification of candidate ferritic steels.** Megusar, J.; Craven, C.A.; Kohse, G.; Runkle, J.; Harling, O.K.; Grant, N.J. (Massachusetts Institute of Technology and Industrial Materials Technology). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

The objective of this work is to evaluate the potential of rapid solidification (RS) on the refinement of the microstructure and the potential for lowering irradiation-induced shifts in the ductile-to-brittle transition temperature (DBTT) in the Candidate Ferritic Steels. HT-9 and 9Cr-1Mo steels were rapidly solidified by the liquid dynamic compaction (LDC) process and 2-1/4Cr-1Mo steel was prepared by the ultrasonic gas atomization (USGA) process. The consolidation was performed in the ferritic temperature range in order to minimize segregation. These alloys will be tested at ORNL using 1/3 CVN test specimens and the results will be compared with those for conventionally processed alloys. 6 references, 7 figures, 2 tables.

31065 (DOE/ER—0045/13, pp 152-155) **Poisson's ratio measurements for martensitic stainless steels.** Gelles, D.S. (Westinghouse Hanford Co., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Poisson's ratio measurements using an ultrasonic technique over the temperature range room temperature to 600°C are reported for HT-9. As much as a 0.1 variation is found as a result of specimen orientation. However, based on comparisons from the literature, it is concluded that such variations are common and are not due to orientation effects. Further measurements will be needed before a design equation for the MHFES can be generated. 6 references, 3 tables.

31066 (DOE/ER—0045/13, pp 156-160) **Effects of irradiation on the fracture toughness of HT-9.** Huang, F.H. (Westinghouse Hanford Co., Richland, WA). Mar 1985. NTIS, PC A11/MF A01. File Number DE85010454.

In Alloy development for irradiation performance. Semiannual progress report for period ending September 30, 1984.

Compact tension specimens of HT-9 irradiated at 390, 450 and 500°C were tested at 90, 205 and 450°C. Test results showed that both test and irradiation temperatures have insignificant effects on the fracture toughness of HT-9. However, the tearing modulus increases substantially with increasing irradiation temperature. In addition, the toughness of HT-9 at 205°C where a thoroughness trough was observed for unirradiated HT-9 remained unchanged after irradiation to a fluence of 5.5 x 10^{22} n/cm^2. 3 references, 6 figures, 1 table.

31067 (DOE/ER—0113/5) **Eighth annual progress report on special purpose materials for magnetically confined fusion reactors.** (USDOE Office of Energy Research, Washington, DC. Development and Technology Div.; Oak Ridge National Lab., TN (USA)). Mar 1986. Contract AC05-84OR21400. 53p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86010065.

From High temperature plasma diagnostics; Hilton Head Island, SC, USA (9 Mar 1986).

Centralized databases for handling reduced data for physics analysis have been implemented for the DIII-D tokamak. Each database record corresponds to a specific snapshot in time for a selected discharge. Features of the database environment include automatic updating, data integrity checks, and data traceability. Reduced data from each diagnostic comprises a dedicated dataset (a subset of the database) with quality assurance provided by a physicist. For the confinement database, these datasets will be used to create profile datasets which will be input to a transport code to create a transport dataset. The databases are implemented on a Digital Equipment Corporation VAX 8600 running VMS. The database management system is S1032 from Software House, Inc.

31070 (IPPJ—678, pp 226-248) **Comparative study of free electron laser experiments in longitudinal and transverse wiggler geometries.** Kawasaki, S.; Hirose, K.; Kamada, K.; Masuzaki, M.; Kubota, Y. (Kanazawa Univ., Japan. Faculty of Science). May 1984. NTIS (US Sales Only), PC A13/MF A01. File Number DE86780446. (CONF-8311280—).

From Collaborating research meeting on particle-beam applications to fusion research; Nagoya, Japan (21 Nov 1983).

Experiments of intense electromagnetic wave generation in the frequency range of cm-mm microwave are carried out on the basis of the interactions of an IREB and various structures surrounding the beam. The results of the recent study using an IREB (particle energy of 0.6 MeV, peak intensity of 10 kA and 10 ns duration) in the regimes of collective Raman FEL and electron cyclotron maser in the axially periodic and transverse wigglers are described and discussed briefly. An intense radiation of 20-25 GHz is observed in a considerably narrow range of the guide magnetic field and reasonably attributed to ECM mechanism. Although the effect of the wiggler field on the frequency spectrum of the generated e.m. waves is clearly seen, no distinct Raman FEL radiation is identified in any geometry. Compared with a simple linear theory it is found that the identification and the determination of the detected radiation modes are of crucial importance especially under the effect of the strong axial uniform magnetic field imposed to keep the macroscopic stability of the REB. More exquisite diagnostics of the IREB parameters are needed to get a better coincidence with the theoretical predictions.

31071 (IPPJ—678, pp 30-39) **Equation of state for fuel and target implosion.** Arai, Masaru; Kawata, Shigeo; Niu, Keishiro. (Tokyo Inst. of Tech., Japan). May 1984. NTIS (US Sales Only), PC A13/MF A01. File Number DE86780446. (CONF-8311280—).

From Collaborating research meeting on particle-beam applications to fusion research; Nagoya, Japan (21 Nov 1983).

In order to achieve target implosion of inertial confinement fusion, it is necessary to change the state of DT fuel from a cryogenic solid state to an extremely high density and a high temperature state. In this implosion process, the equation of state between these macroscopic values plays an important role. The data of Sesame E.O.S. Library are adopted for the equation of state, and the simulation calculation for target implosion is performed with a one-dimensional hydrodynamic simulation code. Comparison between the case using these data and one using equation of state for ideal gas is also done.

31072 (IPPJ—678, pp 52-79) **Effect of nonuniform implosion of target on fusion parameters.** Kawata, Shigeo; Niu, Keishiro. (Tokyo Inst. of Tech., Japan). May 1984. NTIS (US Sales Only), PC A13/MF A01. File Number DE86780446. (CONF-8311280—).

From Collaborating research meeting on particle-beam applications to fusion research; Nagoya, Japan (21 Nov 1983).

The effect of the nonuniform implosion of the ICF target on the fusion parameters is investigated numerically. The numerical analysis is carried out by using a three-dimensional particle in cell code with sliding grids. The numerical results show that the nonuniformity of the implosion acceleration is required to be less than a few percent for a pellet of reactor size.

31073 (IPPJ—678, pp 80-94) **Simulation of LIB target implosion.** Nagata, Norimasa; Kawata, Shigeo; Niu, Keishiro. (Tokyo Inst. of Tech., Japan). May 1984. NTIS (US Sales Only), PC A13/MF A01. File Number DE86780446. (CONF-8311280—).

From Collaborating research meeting on particle-beam applications to fusion research; Nagoya, Japan (21 Nov 1983).

A one-dimensional hydrodynamic simulation code for the analysis of the target implosion used in LIB-ICF which includes the various effects has been developed. This code includes some effects concerned with the incident particle beam. These effects decrease the implosion velocity and the implosion efficiency. So the energy deposition profile of the incident particle beam must always be considered exactly in the target design for LIB-ICF.

31074 **(LA-UR—86-641) Prospects for improved fusion reactors.** Krakowski, R.A.; Miller, R.L.; Hagenson, R.L. (Los Alamos National Lab., NM (USA); Phillips Petroleum Co., Bartlesville, OK (USA)). 1986. Contract W-7405-ENG-36. 10p. (CONF-860603—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007377.

From 4. European nuclear conference and 9. FORATOM congress (ENC '86) and international nuclear trade fair; Geneva, Switzerland (1 Jun 1986).

Ideally, a new energy source must be capable of displacing old energy sources while providing both economic opportunities and enhanced environmental benefits. The attraction of an essentially unlimited fuel supply has generated a strong impetus to develop advanced fission breeders and, even more strongly, the exploitation of nuclear fusion. Both fission and fusion systems trade a reduced fuel charge for a more capital-intensive plant needed to utilize a cheaper and more abundant fuel. Results from early conceptual designs of fusion power plants, however, indicated a capital intensiveness that could override cost savings promised by an inexpensive fuel cycle. Early warnings of these problems appeared, and generalized routes to more economically attractive systems have been suggested; specific examples have also recently been given. Although a direct reduction in the cost (and mass) of the fusion power core (FPC, i.e., plasma chamber, first wall, blanket, shield, coils, and primary structure) most directly reduces the overall cost of fusion power, with the mass power density (MPD, ratio of net electric power to FPC mass, kWe/tonne) being suggested as a figure-of-merit in this respect, other technical, safety/environmental, and institutional issues also enter into the definition of and direction for improved fusion concepts. These latter issues and related tradeoffs are discussed.

31075 **(LA-UR—86-679) Interstitial dislocation loop nucleation and growth and swelling produced by high-energy cascades.** Yu, J.; Sommer, W.F.; Bradbury, J.N. (Los Alamos National Lab., NM (USA); Academia Sinica, Beijing (China). Inst. of Atomic Energy). 1986. Contract W-7405-ENG-36. 38p. (CONF-860605—5). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86007374.

From 13. international symposium on the effects of radiation on materials; Seattle, WA, USA (23 Jun 1986).

Structural materials for advanced energy sources such as magnetically-and inertially-confined thermonuclear reactors are subjected to a radiation enviornment that produces high-energy displacement cascades and transmutation products that include helium. We address these characteristics and formulate their effect on the microstructural evolution of a material. We consider that, immediately after a high energy cascade event, a vacancy-rich region exists near the primary event site and that an interstitial-rich zone, formed by collision chains, exists some distance from the primary event site. Transmutation-product helium can diffuse into the vacancy-rich zone and stabilize bubble nuclei that will later grow if sufficient vacancies and helium atoms diffuse to the nucleus. These bubbles are the sinks for excess radiation-produced vacancies. The excess radiation-produced interstitials migrate and bond; if the binding energy is high eneough, a di-interstitial is considered to be a stable dislocation-loop nucleus. The loop nuclei grow if they re-

ceive more interstitials than vacancies; this represents material swelling since the bubbles do not cause a lattice contraction to offset the dilation caused by the growing dislocation loops.

31076 **(LA-UR—86-1386) Directions for improved fusion reactors.** Krakowski, R.A.; Miller, R.L.; Delene, J.G. (Los Alamos National Lab., NM (USA); Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400;W-7405-ENG-36. 18p. (CONF-860551—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010195.

From Technical meeting and workshop on fusion reactor design and technology; Yalta, USSR (26 May 1986).

Conceptual fusion reactor studies over the past 10 to 15 years have projected systems that may be too large, complex, and costly to be of commercial interest. One main direction for improved fusion reactors points towards smaller, higher-power-density approaches. First-order economic issues (i.e., unit direct cost and cost of electricity) are used to support the need for more compact fusion reactors. A generic fusion physics/engineering/costing model is used to provide a quantiative basis for these arguments for specific fusion concepts.

31077 **(LBL—21174) Muon catalyzed fusion.** Breunlich, W.H.; Cargnelli, M.; Marton, J.; Naegele, N.; Pawlek, P.; Scrinzi, A.; Werner, J.; Zmeskal, J.; Bistirlich, J.; Crowe, K.M. (Lawrence Berkeley Lab., CA (USA); Oesterreichische Akademie der Wissenschaften, Vienna; Los Alamos National Lab., NM (USA); Technische Univ. Muenchen, Garching (Germany, F.R.). Physikdepartment). Jan 1986. Contract AC03-76SF00098. 16p. (CONF-860166—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009921.

From Workshop on fundamental muon physics: atoms, nuclei, and particles; Los Alamos, NM, USA (20 Jan 1986).

This paper presents an overview of the program and results of our experiment performed by a European-American collatoration at the Swiss Institute of Nuclear Research. Systematic investigations of the low temperature region (23K to 300K) reveal a surprisingly rich physics of mesoatomic and mesomolecular processes, unparalleled in other systems of isotopic hydrogen mixtures. A dramatic density dependence of the reaction rates is found. The rich structure in the time spectra of the fusion neutrons observed at low gas density yields first evidence for new effects, most likely strong contributions from reactions of hot muonic atoms. The important question of muon losses due to He sticking is investigated by different methods and over a wide range of tritium concentrations.

31078 **(PPPL—2270) Model for electron cooling by radiation losses in plasmas: application to soft x-ray laser development.** Skinner, C.H.; Keane, C. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1986. Contract AC02-76CH03073. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009751.

We present a simple model which may be used to evaluate the suitability of different ions for rapid plasma cooling by line radiation in recombination pumped x-ray laser schemes.

31079 **(PPPL—2320) Numerical determination of the magnetic field line Hamiltonian.** Kuo-Petravic, G.; Boozer, A.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1986. Contract AC02-76CH03073. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009749.

The structure of a magnetic field is determined by a one-degree of freedom, time-dependent Hamiltonian. This Hamiltonian is evaluated for a given field in a perturbed action-angle form. The location and the size of magnetic islands in the given field are determined from Hamiltonian perturbation theory and from an ordinary Poincare plot of the field line trajectories.

31080 **(SAND—86-0017C) Improved shielding calculations for the particle beam fusion accelerator PBFA II.** Sweeney, M.A.; Halbleib, J.A.; Tolk, K.M. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 6p. (CONF-860652—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86004988.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

PBFA II is a 36-module particle beam fusion accelerator at Sandia National Laboratories that became operational in December 1985. A cutaway drawing of the accelerator is shown. The accelerator has about 3.5 times the energy and power of PBFA I, a 36-module accelerator in operation since June 1980. The most significant difference between the two accelerators, however, is the much higher machine voltage on PBFA II (30 MV instead of 2 MV). The 30-MV voltage will facilitate focusing of heavier ions, such as lithium and carbon, to a fusion target. Some shielding considerations are described.

31081 **(SAND—86-0057C) Evaluation of cooling channel configurations for actively cooled limiters.** Koski, J.A.; Whitley, J.B. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 6p. (CONF-860610—26). NTIS, PC A02/MF A01; GPO Dep. File Number DE86008780.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

The Sandia electron beam test system (EBTS) was used to heat one side of 7.7 mm and 12.7 mm inside diameter copper tubes. A single tube placed horizontally in the EBTS vacuum chamber was heated on the top by a rastered 30 kV electron beam. The test section was cooled with water supplied by a centrifugal pumped closed loop system. Coolant inlet and exit pressures, flow rate, inlet temperature and temperature rise were measured as were the target's surface and backside temperatures. Water calorimetry was used to determine the actual delivered power, with all system operation and data collection under computer control. The flow within the heated region was studied by viewing directly through the tube.

31082 **(UCRL—93834-Rev.1) Determining plasma-fueling sources with an end-loss ion spectrometer. Revision 1.** Grubb, D.P.; Foote, J.H. (Lawrence Livermore National Lab., CA (USA)). 4 Mar 1986. Contract W-7405-ENG-48. 15p. (CONF-860324—2-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009386.

From High temperature plasma diagnostics; Hilton Head Island, SC, USA (9 Mar 1986).

To help identify the major sources of fueling gas in Tandem Mirror Experiment-Upgrade (TMX-U), we mounted a mass-sensitive, E parallel B, end-loss ion spectrometer (ELIS) near the machine's centerline. We set the electric field in the ELIS to simultaneously measure the axial loss currents of both hydrogen and deuterium. We then initiated plasma discharges, where we injected either hydrogen or deuterium gas into the central cell. We also selected and deselected the central-cell neutral beams that were fueled with hydrogen gas. The end-cell neutral beams were always selected and fueled with deuterium. By taking the ratio of the hydrogen end-loss current to the deuterium end-loss current (with a known deuterium-gas feed rate), we were able to infer the effective fueling rates that were due to wall reflux, central-cell beams, and end-cell beams. The results were the following: wall reflux, 6 Torr x l/s; central-cell beams, 15 Torr x l/s; and end-cell beams 1 Torr x l/s.

31083 **(UCRL—93950) Coatings for high energy applications. The Nova laser.** Wirtenson, G.R. (Lawrence Livermore National Lab., CA (USA)). 1986. Contract W-7405-ENG-48. 35p. (CONF-860117—8). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009407.

From Los Angeles symposium and exhibition on optical and electro-optical engineering; Los Angeles, CA, USA (19 Jan 1986).

The combined requirements of energy density, multiple wavelength, and aperture make the coatings for the Nova Inertial Confinement Fusion (ICF) laser unique. This ten beam neodymium glass laser system, built at the Lawrence Livermore National Laboratory (LLNL), has over a thousand major optical components; some larger than one meter in diameter and weighing 380 Kg. The laser operates at 1054 nm and can be frequency doubled to 527 nm or tripled to 351 nm by means of full aperture potassium dihydrogen phosphate (KDP) crystal arrays. The 1.0 nsec fluence varies along the laser chain, sometimes reaching values as high as 16 J/cm^2 at the input lens to one of the spatial filters. The design specifications of this massive optical system were changed several times as

the state-of-the-art advanced. Each change required redesign of the optical coatings even as vendors were preparing for production runs. Frequency conversion to include shorter wavelengths mandated the first major coating redesign and was followed almost immediately by a second redesign to reduce solarization effects in borosilicate crown glass. The conventional thermal evaporation process although successful for the deposition of mirror coatings, was not able to produce antireflection coatings able to survive the locally high chain fluences. As a consequence it became necessary to develop another technique. Solution produced coatings were developed having transmissions exceeding 99% per part and damage threshold values equal to the bare substrate. The unique requirement of the Nova laser necessitated special deposition and metrology equipment. These programmatic developments will be reviewed in the context of the cooperative working relationship developed between LLNL and its vendors. It was this excellent relationship which has enabled LLNL to obtain these highly specialized coatings for the Nova laser.

31084 **(UCRL—94286) Expert system to control a fusion energy experiment.** Johnson, R.R.; Canales, T.; Lager, D. (Lawrence Livermore National Lab., CA (USA)). 1986. Contract W-7405-ENG-48. 8p. (CONF-860638—4). NTIS, PC A02. File Number DE86009720.

From American control conference; Seattle, WA, USA (18 Jun 1986).

This paper describes a system that automates neutral beam source conditioning. The system achieves this with artificial intelligence techniques by encoding the behavior of several experts as a set of if-then rules in an expert system. One of the functions of the expert system is to control an adaptive controller that, in turn, controls the neutral beam source. The architecture of the system is presented followed by a description of its performance.

31085 **Cost assessment of a generic magnetic fusion reactor.** Sheffield, J.; Dory, R.A.; Cohn, S.M.; Delene, J.G.; Parsly, L.; Ashby, D.E.T.F.; Reiersen, W.T. (Oak Ridge National Laboratory, P.O. Box Y, Oak Ridge, TN 37831). *Fusion Technology;* 9: No. 2, vp(Mar 1986). Contract AC05-84OR21400.

A generic reactor model is used to examine the economic viability of electricity generation by magnetic fusion. The simple model uses components that are representative of those used in previous reactor studies of deuterium-tritium burning tokamaks, stellarators, Bumpy Tori, reversed-field pinches, and tandem mirrors. Conservative costing assumptions are made. The generic reactor is not a tokamak but rather it is intended to emphasize what is common to all magnetic fusion reactors. The reactor uses a superconducting toroidal coil set to produce the dominant magnetic field. To this extent, it is not as good an approximation to systems, such as the reversed-field pinch, in which the main field is produced by a plasma current. The main output of the study is the cost of electricity as a function of the weight and size of the fusion core - blanket, shield, structure, and coils. The model shows that a 1200-MW (electric) power plant with a fusion core weight of approx. = 10,000 tonnes should be competitive in the future with fission and fossil plants. Sensitivity studies that vary the assumptions show that this result is not sensitively dependent on any given assumption. Of particular importance is the result that this scale of fusion reactor may be realized with only moderate advances in physics and technology capabilities.

31086 **Deuterium-tritium fuel self-sufficiency in fusion reactors.** Abdou, M.A.; Vold, E.L.; Gung, C.Y.; Youssef, M.Z.; Shin, K. (University of California at Los Angeles, School of Engineering and Applied Science, Department of Mechanical, Aerospace and Nuclear Engineering, Los Angeles, CA 90024). *Fusion Technology;* 9: No. 2, vp(Mar 1986).

Conditions necessary to achieve deuterium-tritium fuel self-sufficiency in fusion reactors are derived through extensive modeling and calculations of the required and achievable tritium breeding ratios as functions of the many reactor parameters and candidate design concepts. It is found that the excess margin in the breeding potential is not sufficient to cover all present uncertainties. Thus, the goal of attaining fuel self-sufficiency significantly restricts the allowable parameter space and design concepts. For example, the required breeding ratio can be reduced by (A) attaining high tritium fractional burnup, >5%, in the plasma, (B) achieving very high reliability, >99%, and very short times, <1 day, to fix failures in the tritium processing system, and (C) ensuring that nonradioactive decay losses from all subsystems are extremely low, e.g., <0.1% for the plasma exhaust processing system. The uncertainties due to nuclear data and calculational methods are found to be significant, but they are substantially smaller than those due to uncertainties in system definition.

31087 **Uncertainties in prediction of tritium breeding in candidate blanket designs due to present uncertainties in nuclear data base.** Youssef, M.Z.; Abdou, M.A. (University of California School of Engineering and Applied Science, Department of Mechanical, Aerospace, and Nuclear Engineering, Los Angeles, CA 90024). *Fusion Technology;* 9: No. 2, vp(Mar 1986). Contract AA03-76SF00034.

Estimates of the uncertainty Δ/sub D/ in predicting the achievable tritium breeding ration (TBR) due to the uncertainties in nuclear data base are presented for several fusion blanket concepts. Specifically, the impact of the current uncertainties in measuring basic nuclear data on the calculated TBR is analyzed and discussed for four leading blanket designs that utilize different breeding materials, namely, Li_2O, 17Li-83Pb, $LiAlO_2$, and flibe. The impact on the TBR values of various evaluations for beryllium, which is employed as a multiplier in the latter two blankets, has been studied. Estimates for Δ/sub D/ in other blanket concepts have also been assessed. Moreover, estimates have been made, based on previous studies, for the contribution to Δ/sub D/ introduced by using neutron cross-section libraries that have different group structure and weighting spectra. Based on statistically incorporating the present cross-section uncertainties and their correlation in the analysis, the range of the uncertainty in TBR was found to be between 2 and 6% in all the concepts considered. The nonstatistical treatment for cross-section errors tends to give larger values for Δ/sub D/. The uncertainty in TBR introduced by misrepresenting the secondary energy-angle distribution of the $^9Be(n,2n')$ cross-section ranges from approx. =4% in the flibe to approx. =2% in the $LiAlO_2$ blanket. Uncertainty up to approx. =15% can be encountered in the TBR evaluation in thin blankets with natural ^6Li enrichment if broad-group cross-section libraries are used. However, this uncertainty can be reduced upon using an appropriate weighting spetrum representative of the one found in these blankets type.

31088 **An assessment of tritium breeding requirements based on the tritium fuel cycle.** Jung, J. (Argonne National Laboratory, Fusion Power Program 9700 South Cass Avenue, Argonne, IL 60439). *Fusion Technology;* 9: No. 2, vp(Mar 1986).

An assessment of tritium breeding requirements for fusion power reactors is presented. The analysis is based on an evaluation of time-dependent tritium inventories in the reactor system. The method presented can be applied to any fusion systems operating in a steady-state mode as well as in a pulsed mode. As an example, the UWMAK-I design was analyzed and it has been found that the start-up inventory requirement calculated by the present method significantly differs from those previously calculated. The effect of reactor parameter changes on the required tritium breeding ratio is also analyzed for a variety of reactor operation scenarios. A FORTRAN-IV Computer Program, the JET-I code, has been developed to implement the present method. It is now in operation on the Argonne National Laboratory IBM-3033 Computer System.

31089 **Reactivation coefficient of muon-catalyzed deuterium-tritium fusion and its enhancement.** Takahaski, H. (Brookhaven National Laboratory, Upton, NY 11973). *Fusion Technology;* 9: No. 2, vp(Mar 1986).

The reactivation process of a muon that is stuck to an alpha-particle produced in muon-catalyzed deuterium-tritium (D-T) fusion is studied for the different isotope targets P, D, and T by using the born approximation calculation of charge-transfer cross sections. The isotope dependence is small compared with the large isotope effects observed by Jones et al. The authors calculated density dependence is very similar to that of Bracci and Fiorentini, and it is

not as large as that observed by Jones et al. The enhancement of muon reactivation by application of a high-intensity electric field to the target is studied. Even when the very high electrical field of 40 mv/cm is applied to a liquid hydrogen target, the enhancement is small because of the isotropic emission of an alpha particle in unpolarized D-T fusion. Even in polarized D-T fusion, the enhancement is small.

31090 **Sputtering performance of a pumped limiter for an ignition tokamak.** Brooks, J.N. (Argonne National Laboratory, Fusion Power Program, Argonne, IL 60439). *Fusion Technology;* 9: No. 2, vp(Mar 1986).

The sputtering performance of a pumped limiter for a near-term ignition tokamak was analyzed using the REDEP computer code. Erosion, redeposition, surface shape and heat flux changes with time, and plasma contamination issues were examined. A carbon-coated limiter was found to give acceptable sputtering performance over a typical device lifetime if, and only if, acceptable redeposition properties of carbon are obtained. Beryllium is a good backup material in the event carbon is not acceptable.

31091 **Transmission of fast neutrons through an iron sphere.** Hertel N.E.; Johnson, R.H.; Wehring, B.W.; Dorning, J.J. (University of Illinois at Urbana-Champaign, Nuclear Radiation Laboratory, Nuclear Engineering Program, Urbana, IL 61801). *Fusion Technology;* 9: No. 2, vp(Mar 1986).

Integral Experiments have been performed using a homogeneous iron spherical shell to test neutron cross-section data. Neutron leakage spectra from the shell were measured using ^{252}Cf-fission and (deuterium-tritium) D-T-fusion neutron sources and an Ne-213 spectrometry system. An associated particle detector was used to monitor the absolute D-T neutron source strength as well as any accompanying deuterium-deuterium neutron contamination. The leakage spectra were calculated using the continuous-energy Monte Carlo code VIM and the discrete ordinates S/sub n/ code ANISN employing ENDF/B-IV. For neutron energies between 1 and 5 MeV, the calculations underpredicted the leakage spectrum by factors of 1.4 to 2 for the Californium neutron source and 2 to 3 for the D-T neutron source. The large discrepancies are attributed to inadequate representation of cross-section resonance structure (namely, minima); inadequate representation of the angular and secondary energy distributions for continuum inelastic scattering and (n,2n) reactions also contribute to these discrepancies.

31092 **Scaling of KrF lasers for inertial confinement fusion.** Hunter, A.M.; Hunter, R.O.; Johnson, T.H. (Western Res. Corp., San Diego, CA). *IEEE (Institute of Electrical and Electronics Engineers) Journal of Quantum Electronics;* **QE-22**: No. 3, vp(Mar 1986).

The scaling and design principles for a MJ-scale krypton fluoride laser are derived and applied. First, the scaling limits of size and operation of a single large-aperture module (oscillator or amplifier) are explained, and its performance evaluated. A new scheme for combining amplifier modules into high output power chains is then presented. The performance of this architecture is investigated, showing that it effectively produces both the total energy and pulselength required for inertial confinement fusion using existing technology, while maintaining an easily manageable level of system complexity and acceptable low flux levels on optical elements.

31093 **High energy laser plasma accelerators.** Tajima, T. (Univ. of Texas, Austin). *Laser and Particle Beams;* 3: 351-413(Nov 1985). Contract FG05-80ET53088.

Intense colinear laser beams ω_0, kappa$_0$ and ω_1, kappa$_1$ shone on a plasma with a frequency separation equal to the electron plasma frequency ω/sub pe/ are capable of creating a large coherent longitudinal electric field E/sub L/ = mcω/sub pe//e of the order of 1 GeV/cm for a plasma density of 10^{18} cm^{-3} by the laser beat excitation of plasma oscillations. Accompanying favorable and deleterious physical effects using this process for a high energy beatwave accelerator are discussed: longitudinal dephasing, pump depletion, transverse laser diffraction, plasma turbulence effects, self-steepening, self-focusing, etc. The basic equation, the driven nonlinear Schroedinger equation, is derived to describe this system. Advanced accelerator concepts to overcome some of these problems are proposed, including various forms of the plasma fiber accelerator. An advanced laser architecture suitable for the beat-wave accelerator is suggested. Accelerator physics issues such as the luminosity are discussed. Applications of the present process to the current drive in a plasma and to the excitation of collective oscillations within nuclei are also discussed. 96 references, 38 figures.

31094 **Energy deposition and shielding requirements for all concepts of the Blanket Comparison and Selection Study.** Gohar, Y.; Yang, S.-T. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 2010-2020(Sep 1985).

The Blanket Comparison and Selection Study (BCSS) carried out 16 blanket concepts (7 tokamaks and 9 tandem mirror reactors (TMRs)) for the final evaluation process. This process requires all the blanket design parameters, including the energy multiplication factors, the atomic displacement rate in the first wall, and the shielding definition for the reactor. A shielding assessment is performed to determine shielding materials, compositions, arrangements, and thicknesses for each concept. Two shielding criteria are adopted for this assessment: (a) workers are permitted in the reactor hall 1 day after shutdown, and (b) superconductor coils are required to function for a 150 MW x yr/m^2 deuterium-tritium neutron exposure at the first wall without a change in their performances. For the design purpose, the occupational exposure is 0.5 mrem/h, based on working 8 h/day and 40 h/week. This dose level is used to concur with current practice in the nuclear industry and the exposure policy of the U.S. Department of Energy, which limits the on-site personnel exposure level to less than onefifth of the maximum permissible dose equivalent limits. The personnel exposure criterion is used to size the outboard bulk shield for tokamak reactors and the shield thickness between the central cell coils for TMRs. In the fusion power environment the insulator materials are the most sensitive components in the superconductor coils from the radiation damage point of view. A maximum insulator dose of 10^{10} rad in the thermal insulator is used to size the bulk shield in the inboard section of the tokamak reactors and the central cell sections under the coils for TMRs. As a result of this criterion, all other nuclear responses do not exceed any design limit for the superconductor materials or the copper stabilizer.

31095 **A comparative multidimensional nuclear analysis of candidate blanket designs for Tokamak and tandem mirror reactor concepts.** Jung, J.; Foley, J.V. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 1998-2009(Sep 1985).

Three-dimensional, tritium breeding, and energy multiplication analyses were performed for nine tandem mirror reactor (TMR) designs and seven tokamak reactor designs that had evolved as the "rank-1" concept from the latest Blanket Comparison and Selection Study. These designs include a variety of combinations of candidate breeder, coolant, and structural materials that seem most promising for the respective TMR/tokamak concept application. The analysis was performed using a single consistent computational technique, i.e., a continuous energy Monte Carlo transport method based on MCNP with the associated cross section libraries based on the latest ENDF/B-V data. Through a comparative study of those 16 candidate blanket designs, an attempt is made to rank them from a standpoint of the neutronic blanket performance.

31096 **An assessment of problems associated with tritium containment.** Sze, D.K.; Bjorndahl, W.D.; Hassanein, A.M.; Piet, S.J.; Wong, C.P.C. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 1985-1997(Sep 1985).

A special task group was established as a part of the Blanket Comparison and Selection Study to investigate the problems associated with tritium containment in blanket systems. The goal of the task group was to review the existing experimental results and to define a set of ground rules that would form a common basis for each design group to resolve this particular problem. The work of the task group is summarized. Due to the scarcity of information, and often contradictory nature of the existing information, note that the conclusions are based on the best judgment of the task group. It

is recommended that the conclusions be updated as more experimental results become available.

31097 **Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review.** Liu, Y.Y.; Billone, M.C.; Clemmer, R.G.; Fischer, A.K.; Hollenberg, G.W.; Tam, S.W. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 1970-1984(Sep 1985).

The fabrication, properties, and irradiation behavior of Li_2O and γ-$LiAlO_2$ are reviewed and assessed to determine the potential of these materials to satisfy the basic solid breeder blanket performance requirements. Based on the data analysis and theoretical modeling, a set of major technical uncertainties is identified. These uncertainties include: fabricability of sphere-pac solid breeders; high fluence and burnup effects on thermal conductivity and microstructural stability; high fluence and burnup effects on tritium diffusion coefficients at low temperature; relationship among purge flow chemistry, surface adsorption, and species of released tritium; and mechanical properties and the loads imposed on the structural materials by the breeder during blanket operation. Resolution of these issues is important in assuring that solid breeder blankets can be designed with confidence.

31098 **Liquid-metal corrosion.** Chopra, O.K.; DeVan, J.H.; Smith, D.L.; Sze, D.K.; Tortorelli, P.F. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 1956-1969(Sep 1985).

A review of corrosion and environmental effects on the mechanical properties of candidate structural alloys for use with liquid metals in fusion reactors is presented. The corrosion/mass transfer behavior of austenitic and ferritic steels and vanadium-base alloys is evaluated to determine the preliminary operating temperature limits for circulating and static liquid-lithium and Pb-17Li systems. The influence of liquid-metal environment on the mechanical properties of structural materials is discussed. Corrosion effects of nitrate and fluoride salts are presented. Requirements for additional data are identified.

31099 **Structural analysis under the Blanket Comparison and Selection Study.** Majumdar, S. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 1944-1955(Sep 1985).

Structural design procedures followed in the Blanket Comparison and Selection Study are briefly reviewed. The American Society of Mechanical Engineers Boilers and Pressure Vessels Code, Section III, Code Case N47 has been used as a design guide. Its relevance to fusion reactor applications, however, is open to question and needs to be evaluated in the future. The primary structural problem encountered in tokamak blanket designs is the high thermal stress due to surface heat flux, with fatigue being an additional concern for pulsed systems. The conflicting requirements of long erosion life and high surface heat flux capability imply that some form of stress relief in the first-wall region will be necessary. Simplified stress and fatigue crack growth analyses are presented to show that the use of orthogonally grooved first wall may be a potential solution for mitigating the thermal stress problem. A comparison of three structural alloys on the basis of both grooved and nongrooved first-wall designs is also presented. Other structural problems encountered in tokamak designs include stresses due to plasma disruptions, and magnetohydrodynamic (MHD) pressure drop in liquid-metal-cooled systems. In particular, it is shown that the maximum stress in the side wall of a uniform duct generated by MHD pressure drop cannot be reduced by increasing the wall thickness or by decreasing the span. In contract to tokamak blankets, tandem mirror blankets are far less severely stressed because of a much lower surface heat flux, coolant pressure, and also because of their axisymmetric geometry. Both blankets, however, will require detailed structural dynamics analysis to verify their ability to withstand seismic loadings if the heavy 17Li-83Pb is used as a coolant.

31100 **Structural materials data base assessment for the Blanket Comparison and Selection Study.** Davis, J.W.; Lechtenberg, T.A.; Smith, D.L.; Wiffen, F.W. (McDonnell Douglas Astronautics Company, St. Louis, MO). *Fusion Technology;* 8: No. 2, 1927-1943(Sep 1985).

The Blanket Comparison and Selection Study (BCSS) had as its primary goal the selection of a limited number of blanket concepts for fusion power reactors, to serve as the focus for the U.S. Department of Energy blanket research and development program. To help provide a common basis for evaluation of all candidate blanket concepts considered by the BCSS, a structural materials data base assessment was performed that included a compilation of available materials properties data, specification of limiting criteria for materials performance, and determination of design allowable parameters. Three classes of alloys are currently considered as leading candidates for the first-wall/blanket structure of a fusion power reactor. For the BCSS, one reference or baseline alloy was selected from each class and one low-activation counterpart to each reference alloy was identified for evaluation. The alloy classes, reference alloys, and low-activation analogs selected were: austenitic stainless steels (primary candidate alloy; manganese-stabilized steel); ferritic or martensitic steels (HT-9, Fe-11 Cr-2.5 W-0.3 V-0.15 C); and vanadiumbase alloys (V-15 Cr-5 Ti, reference alloy is low activation). The critical nuclear, thermophysical, and mechanical properties of the three reference alloys were reviewed. Where insufficient data exist for a reliable assessment, best estimates were provided for use in the blanket concepts development. For the low-activation analogs, the same properties as their respective reference alloys were assumed, including radiation damage resistance. The design stress limits, maximum allowable operating temperature, and lifetime were set primarily by radiation damage considerations. Critical design issues associated with each of the reference alloys and low-activation analogs were identified, together with limiting criteria for materials performance.

31101 **The determination of deuterium and tritium in effluent wastewater by pulsed nuclear magnetic resonance spectroscopy.** Attalla, A.; Birkbeck, J.C. (Monsanto Research Corporation, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2467-2472(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A pulsed nuclear magnetic resonance (NMR) procedure was developed for the quantitative determination of deuterium and tritium in radioactive, effluent, wastewater to aid in the design of an efficient combined electrolytic/catalytic exchange system for the recovery of these hydrogen isotopes. The deuterium and tritium NMR signals were observed at 9.210 and 45.7 MHz, respectively. Ten different effluent water samples were analyzed for deuterium and tritium to establish base-line data for the preparation of standard reference samples. The hydrogen isotope concentrations ranged from 0.11 to 2.40 g deuterium and from 2.0 to 21.0 mg tritium per liter of processed sample. The standard deviation of the hydrogen isotope determinations is + or - 0.017g deuterium and + or -0.06 mg tritium per liter of processed effluent water. In the future, the effectiveness of specially prepared and analyzed (calorimetry) effluent samples as tritium standards will be investigated.

31102 **Tritium surface contamination.** Sienkiewicz, C.J. (Monsanto Research Corporation, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2444-2454(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Glovebox wipe surveys were conducted to correlate surface tritium contamination with atmospheric tritium levels. Surface contamination was examined as a function of tritium concentration and of tritium form, HT/T_2 and HTO. The relationship between atmospheric HTO concentration and cleanup time was also investigated.

31103 **Helium-cooled, flibe breeder, beryllium multiplier blanket.** Moir, R.W.; Berwald, D.H.; De Van, J.H.; Jung, J.; Lee, J.D.; Muninger, R.C.; Neef, W.S.; Sherwood, A.E. (Lawrence Livermore National Laboratory, University of California Livermore, CA). *Fusion Technology;* 8: No. 1, 133-148(Jul 1985).

The concept described for the blanket surrounding a fusion reaction chamber is based on the use of molten fluoride salts to convert fusion energy into electricity and to breed the tritium fuel

for the fusion power plant. Helium cools the first-wall and the blanket internals, which consist of a bed of beryllium balls in which neutrons are multiplied. The neutrons are used to breed tritium and also to release extra energy in exothermic nuclear reactions. Tritium is bred in the molten Flibe salt ($LiF + BeF_2$) that flows slowly (about 0.1 m/s) in steel tubes and is removed from the salt and the helium by processing both streams. Because the solubility of tritium in Flibe salt is so low, there is a strong driving force for tritium permeation. A 10-μmthick tungsten permeation barrier, deposited by chemical vapor deposition on the salt-carrying tubes, is proposed for preventing excessive tritium permeation into the helium stream. A 1-mm-thick aluminum jacket on the steel steam generator tubes is proposed to prevent excessive tritium permeation into the steam system. Flibe salt has safety advantages with respect to large accidents in that it will not react with air or water, in contrast to liquid lithium. For the first time, a method is proposed for recycling solid material in fusion blankets. To accomplish this, beryllium pebbles were chosen because the pebbles can be loaded into the blanket after manufacturing and, to accommodate radiation-induced swelling, can be moved periodically by flowing. Once the balls have reached their radiation damage lifetime, they can be removed from the blanket for refabrication and recycle.

31104 **Helium-cooled blanket designs.** Wong R.F.; Bourgue, R.F.; Cheng, E.T.; Clement, P.C.; Creedon, R.L.; Maya, I.; Ruder, R.H.; Schultz, K.R. (GA Technologies, Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 114-132(Jul 1985).

A systematic selection and evaluation of helium-cooled blanket concepts has been performed as part of the Blanket Comparison and Selection Study (BCSS). Helium-cooled Li_2O, lithium, $LiAlO_2$/Be, and Flibe/Be blanket concepts were selected for detailed design and evaluation. These concepts are applicable to both tokamak and tandem mirror reactors (TMRs). The design and analysis of Li_2O, lithium, and $LiAlO_2$/Be blanket concepts are presented. Previous blanket designs were studied and the pressurized lobe configuration was selected for the helium-cooled BCSS designs. Fifty-four different combinations of structural, breeder, and neutron multiplier materials were considered and four helium-cooled blanket concepts were selected for detailed design and evaluation. Mechanical, thermal, and neutronic designs were developed, and tritium control methods were specified. In the final BCSS evaluation, the Li_2O blanket design ranked second for tokamaks and third for TMRs. The lithium blanket design ranked third for tokamaks and fourth for TMRs. To help guide future research and development, the critical issues associated with each of the helium-cooled designs were identified and necessary experimental data highlighted. These data include irradiation behavior of the blanket materials, compatibility between the structure and liquid-metal breeder materials, and the behavior of tritium in a helium-cooled blanket environment. The designs offer favorable performance, design simplicity, and attractive safety features for fusion reactors. Design improvements were identified that could allow still better performance of the helium-cooled blanket designs.

31105 **Design of self-cooled, liquid-metal blankets for tokamak and tandem mirror reactors.** Cha, Y.S.; Gohar, Y.; Hassanein, A.M.; Majumdar, S.; Picologlou, B.F.; Smith, D.L.; Szo, D.K. (Argonne National Laboratory, Fusion Power Program, Argonne, IL). *Fusion Technology;* 8: No. 1, 90-113(Jul 1985).

Results of the self-cooled, liquid-metal blanket design from the Blanket Comparison and Selection Study (BCSS) are summarized. The objectives of the BCSS project are to define a small number (about three) of blanket concepts that should be the focus of the blanket research and development (R&D) program, identify and prioritize the critical issues for the leading blanket concepts, and provide technical input necessary to develop a blanket R&D program plan. Two liquid metals (lithium and lithium-lead (17Li-83Pb)) and three structural materials (primary candidate alloy (PCA), ferritic steel (FS) (HT-9), and vanadium alloy (V-15 Cr-5 Ti)) are included in the evaluations for both tokamaks and tandem mirror reactors (TMRs). TMR is of the tube configuration similar to the Mirror Advanced Reactor Study design. Analyses were performed in the following generic areas for each blanket concept: MHD, thermal hydraulics, stress, neutronics, and tritium recovery. Integral analyses were performed to determine the design window for each blanket design. The Li/Li/V blanket for tokamak and the Li/Li/V, LiPb/LiPb/V, and Li/Li/HT-9 blankets for the TMR are judged to be top-rated concepts. Because of its better thermophysical properties and more uniform nuclear heating profile, liquid lithium is a better coolant than liquid 17Li83Pb. From an engineering point of view, vanadium alloy is a better structural material than either FS or PCA since the former has both a higher allowable structural temperature and a higher allowable coolant/structure interface temperature than the latter. Critical feasibility issues and design constraints for the self-cooled, liquid-metal blanket concepts are identified and discussed.

31106 **Overview of the Blanket Comparison and Selection Study.** Smith, D.L. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 10-44(Jul 1985).

The Blanket Comparison and Selection Study (BCSS) was a 2-yr, multilaboratory project initiated by the U.S. Department of Energy/Office of Fusion Energy. Its primary objectives were to define a limited number of blanket concepts that should provide the focus of the blanket research and development (R & D) program, and identify and prioritize critical issues for the leading blanket concepts. The BCSS focused on the mainline approach for fusion reactor development, namely, the D-T-Li fuel cycle, tokamaks and tandem mirror reactors (TMRs) for electrical energy production, and a reactor parameter space that is generally considered achievable with modest extrapolations from the current data base. The STARFIRE and Mirror Advanced Reactor Study reactor and plant designs, with a nominal first-wall neutron load of 5 MW/m^2, were used as reference designs for the study.

31107 **Safety evaluation of the Blanket Comparison and Selection Study.** Piet, S.J. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 77-89(Jul 1985).

The results of the safety evaluation of the Blanket Comparison and Selection Study (BCSS) are presented. The safety evaluation measured the relative safety and environmental attractiveness of the final group of BCSS blanket concepts for application with either a tokamak or tandem mirror fusion reactor. Two types of blankets were found to be the most attractive in the safety evaluation. One top-blanket-type is a helium-cooled HT-9 structure with a Li_2O breeder, which is preferred if tritium effluent control is good; a lithium breeder would be the backup. The other top blanket concept is liquid-metal-cooled V-15 Cr-5 Ti structure with lithium coolant/breeder, preferred if air and water chemical reactions are adequately controlled; 17Li-83Pb would be the backup coolant/breeder material.

31108 **Tokamak Fusion Core Experiment maintenance study.** Snyder, A.M.; Watts, K.D. (EG & G Idaho, Inc./Mechanical Engineering, Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 291-295(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The recently completed Tokamak Fusion Core Experiment (TFCX) design project investigated potential "next generation" tokamak concepts. An important early development of the design was the incorporation of remote maintainability. Early coordination and incorporation of maintenance aspects to the design of the device and facilities will ensure that the machine can ultimately be maintained and repaired efficiently and cost effectively. A rigorously formatted engineering trade study was performed to determine the preferred configuration for the TFCX reactor based primarily on maintenance requirements. The study indicates a preferred design with an external vacuum vessel and torodial field coils that can be removed by simple radial motion. The trade study is presented and the preferred TFCX configuration is described.

31109 **Fusion reactor and test cell configuration.** Fee, D.S. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 285-290(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Remote maintenance and repair considerations will play a major role in determining the design and layout of next-generation fusion devices, including the buildings and facilities supporting the

nuclear operation of those devices. The reactor/test cell described in this paper represents a "nominal copper" TFCX (Tokamak Fusion Core Experiment) concept that emphasizes an integrated approach to the design of the experimental device and its supporting facilities. This configuration is unique with respect to other TFCX concepts in that it promotes the use of a modular design with readily replaceable stand-alone sectors, integrates the machine and test cell structures, incorporates a facility arrangement that results in a smaller overall facility footprint, reduces the transportation path of activated hardware, and allows access to three sides of the test cell facilities.

31110 **Experimental facility for studying MHD effects in liquid metal cooled blankets.** Reed, C.B.; Dauzvardis, P.V.; Picologiou, B.F. (Argonne National Laboratory, Engineering Division, Argonne, IL). *Fusion Technology;* 8: No. 1, 257-263(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The capabilities of a facility, brought into service to collect data on magnetohydrodynamic (MHD) effects pertinent to liquid-metal-cooled fusion reactor blankets, are presented. The facility, designed to extend significantly the existing data base on liquid metal MHD, employs eutectic NaK as the working fluid in a room temperature closed loop. The instrumentation system is capable of collecting detailed data on pressure, voltage, and velocity distributions at any axial position within the bore of a 2 Tesla conventional electromagnet. The axial distribution of the magnetic field can be uniform or varying with either rapid or slow spatial variations. The magnet gap dimensions, for the uniform field of 2T, are 15.3 cm high x 0.76 m wide x 1.83 m long. NaK was circulated in December 1984 and the magnet was energized in March 1985. Shakedown tests in a round pipe test section are currently underway.

31111 **Magnetohydrodynamic considerations for the design of self-cooled liquid-metal fusion reactor blankets.** Picologlou, B.F. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 276-284(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

It is shown that magnetohydrodynamic (MHD) effects present not only an efficiency but also a feasibility issue for self-cooled liquid-metal blankets of magnetically confined fusion reactors, especially tokamaks. For this reason, MHD considerations are the main driver in the development of the design of such blankets. This paper, intended for the designer, presents in a unified way these considerations, as well as effective strategies to deal with adverse MHD effects.

31112 **MHD flow control as a design approach for self-cooled liquid-metal blankets of magnetic confinement fusion reactors.** Walker, J.S.; Picologlou, B.F. (Department of Theoretical and Applied Mechanics, University of Illinois at Urbana-Champaign, Urbana, IL). *Fusion Technology;* 8: No. 1, 270-275(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A self-cooled, liquid-metal blanket for a magnetic confinement fusion reactor has generally been viewed as a conventional cooling system with the additional, negative effects of the magnetohydrodynamic (MHD) interaction which must somehow be overcome. Recent studies of liquid-metal flows in strong magnetic fields have revealed the existence of characteristic surfaces in such flows. Pressure and voltage are constant to first order on these surfaces, while the surfaces are streamsurfaces for the fluid velocity. In the proposed design approach, these surfaces are used to create the flow patterns which absorb the heat where it is deposited and distribute it throughout the coolant. These MHD "guidevanes" can eliminate much of the complexity of previous blanket designs. Therefore, MHD effects are used as a positive design tool.

31113 **The influence of leakage currents on MHD pressure drop.** Madrame, H.; Taghavi, K.; Tillack, M.S. (University of California, Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 264-269(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The MHD pressure drop in the second wall orifice which connects the first wall cooling channel and the header in one of the BCSS blankets is discussed. Though the second wall is thin, the pressure drop in the orifice can be very large because of leakage current effects. If eddy currents leak and do not have to pass through thin walls, the resistivity of the current path may be low and the current intensity may be high, which induces a high pressure drop. The presence of leakage current greatly affects the MHD pressure drop in fusion reactor blankets.

31114 **Tokamak Fusion Core Experiment (TFCX) special-purpose remote maintenance systems.** Masson, L.S.; Welland, H.J. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 314-317(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A key element in the preconceptual design of the Tokamak Fusion Core Experiment (TFCX) was the development of design concepts for special-purpose remote maintenance systems. Included were systems for shield sector replacement, vacuum vessel sector and toroidal field coil replacement, limiter blade replacement, protective tile replacement, and general-purpose maintenance. This paper addresses these systems as they apply to the copper toroidal field (TF) coil version of the TFCX.

31115 **Tandem Mirror Reactor power balance studies.** Gorker, G.E.; Perkins, L.J. (Grumman Aerospace Corporation, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 332-337(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A Tandem Mirror Reactor (TMR) power plant balance model has been developed and is now being used as a computer aid for performing parametric studies. End-cell power injection into the plasma and the physics plasma Q are used to determine the fusion power. About 80% of the fusion power is transferred by high-energy neutrons to the blanket modules and structures. The other 20% of the fusion power in the highenergy alpha particles is used to heat the deuterium-tritium (D-T) plasma. Most of the plasma-ionized particles transfer their energy to the halo dumps and direct converters. The plant efficiency is calculated for three different system cycles: (1) the pressurized water/saturated steam cycle, (2) the superheated steam cycle, and (3) the more complex superheat/reheat cycle. There is a significant improvement in plant efficiency as the electrical power multiplication factor and steam cycle efficiency increases.

31116 **Computerized cost estimation spreadsheet and cost data base for fusion devices.** Hamilton, W.R.; Rothe, K.E. (Fusion Engineering Design Center, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 356-361(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

An automated approach to performing and cataloging cost estimates has been developed at the Fusion Engineering Design Center (FEDC), wherein the cost estimate record is stored in the LOTUS 1-2-3 spreadsheet on an IBM personal computer. The cost estimation spreadsheet is based on the cost coefficient/cost algorithm approach and incorporates a detailed generic code of cost accounts for both tokamak and tandem mirror devices. Component design parameters (weight, surface area, etc.) and cost factors are input, and direct and indirect costs are calculated. The cost data base file derived from actual cost experience within the fusion community and refined to be compatible with the spreadsheet costing approach is a catalog of cost coefficients, algorithms, and component costs arranged into data modules corresponding to specific components and/or subsystems. Each data module contains engineering, equipment, and installation labor cost data for different configurations and types of the specific component or subsystem. This paper describes the assumptions, definitions, methodology, and architecture incorporated in the development of the cost estimation

spreadsheet and cost data base, along with the type of input required and the output format.

31117 **Tandem Mirror Reactor Systems Code (TMRSC).** Reid, R.L.; Barrett, R.J.; Rothe, K.E. (FEDC/Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 350-355(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

This paper describes a computer code developed to model a tandem mirror reactor. This is the first tandem mirror reactor model to couple the highly linked physics, magnetics, and neutronic analysis into a single code. Results from this code for two sensitivity studies are included in this paper. These studies are designed to determine the impact of center cell plasma radius, length, and ion temperature on reactor cost and performance at constant fusion power and to determine the impact of reactor power level on cost.

31118 **The Mirror Fusion Test Facility (MFTF-B)--status.** Karpenko, V.N. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 427-432(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Mirror Fusion Test Facility (MFTF-B), now under construction at Lawrence Livermore National Laboratory, represents more than an order-ofmagnitude step up from earlier magnetic mirror experiments on the way to a future mirror fusion reactor. In fact, when the device begins operating in 1988, it will be capable of achieving plasma performance approaching scientific breakeven for D-T equivalent operation. We have taken major steps to develop MFTF-B technologies for tandem mirrors. In the machine, we will use steady-state, high-field, superconducting magnets on reactorelevant scales. The 30-s beam pulses, ECRH, and ICRH will also introduce near steady-state technologies into those systems.

31119 **Big Dee - A flexible facility operating near breakeven conditions.** Luxon, J.L.; Davis, L.G. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 441-449(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Doublet III tokamak facility is presently undergoing an upgrade to Big Dee, a device projected to be capable of producing plasmas with parameters approaching breakeven conditions, albeit in hydrogen plasmas. The goal of the upgrade has been to develop a facility capable of studying confinement and beta in non-circular discharges at parameters near breakeven conditions while maintaining the flexibility and accessibility necessary to allow a wide range of problems to be addressed. The upgrade replaces the vacuum vessel and outermost plasma shaping coils allowing higher plasma currents and improved access.

31120 **An economic analysis of fusion breeders.** Delene, J.G. (Engineering Technology Division, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 459-464(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

This paper presents a study of the economic performance of Fission/Fusion Hybrid devices. This work takes fusion breeder cost estimates and applies methodology and cost factors used in the fission reactor programs to compare fusion breeders with Liquid Metal Fast Breeder Reactors (LMFBR). The results of the analysis indicate that the Hybrid will be in the same competitive range as proposed LMFBRs and have the potential to provide economically competitive power in a future of rising uranium prices. The sensitivity of the results to variations in key parameters is included.

31121 **New directions in Tokamak reactors.** Baker, C.C. (Argonne National Laboratory, 9700 S. Cass Avenue Argonne, IL). *Fusion Technology;* 8: No. 1, 707-716(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

It has been five years or more since the last major studies were completed of the tokamak as a commercial power reactor. During that time there have been major physics and technology developments in magnetic fusion as well as programmatic and political changes. There exists a significant number of new ideas which can substantially improve the tokamak concept as a power reactor. This paper outlines some major goals and new directions for a series of scoping studies - Tokamak Power Systems Studies - which are currently in progress.

31122 **Design options for commercial reactors with resistive magnets.** Bromberg, L. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, MA). *Fusion Technology;* 8: No. 1, 747-758(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

In this paper, the options available for tokamak reactors with normal conducting magnets will be described. The advantages and disadvantages of using normal magnets in fusion tokamak reactors will be described. The impact of the use of resistive magnets on the capital cost, environmental concerns and availability (related to cost of electricity) of a tokamak reactor will be discussed. Special emphasis on electricity producing reactors will be given.

31123 **A tokamak ignition/burn experimental research device.** Henning, C.D.; Barr, W.L.; Bulmer, R.H.; Doggett, J.N.; Hoard, R.W.; Johnston, B.M.; Lee, J.D.; Logan, B.G.; Miller, J.R.; Slack, D.S. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 1351-1358(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

(As part of a continuing effort by the Office of Fusion Energy to define an ignition experiment, a superconducting tokamak has been designed with thin neutron shielding and aggressive magnet and plasma parameters. By so minimizing the inner radial dimensions of the tokamak center post, coil, and shielding region, the plasma major radius is reduced with a corresponding reduction in device costa. The peak nuclear-heating rate in the superconducting TF coils is 22 mW/cm^3, which results in a steady heat load to the cryogenic system of 50 kW. Fast-wave, lower-hybrid heating would be used to induce a 10-MA current in a moderate density plasma.) Then pellet fueling would raise the density to achieve ignition as the current decays in a few hundred seconds. Steady-state current drive in subignited conditions permits a 0.8 MW/m^2 average wall loading to study plasma and nuclear engineering effects.

31124 **Nuclear data needs for fusion energy development.** Cheng, E.T. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1423-1430(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

As part of the U.S. DOE Office of Fusion Energy Nuclear Data Needs program, we have continued assessment of the nuclear data needs for the development of fusion energy. We have identified and reviewed the high priority elements whose neutron emission data are needed for a near-term fusion ignition facility and fusion power reactor designs for demonstrating the scientific and engineering feasibilities of fusion energy. We found that most of the elements identified here are lacking experimental data from 6 to 15 MeV except hydrogen, lithium, beryllium, and copper. A list of high priority dosimetry cross sections was developed that includes some 29 reactions, including 6 reactions recommended by the plasma diagnostic group of PPPL. Of these 29 reactions, 18 cross sections were chosen to be included in the ENDF/BVI dosimetry files. The activation cross sections needed for elements to be used in the near-term ignition device and future power reactors were compiled. These cross sections were prioritized according to their activation levels and half-lives of their activation products. All these cross sections are going to be included in the END/B-VI activation files.

31125 **Status of methods, codes and applications for sensitivity and uncertainty analysis.** Youssef, M.Z. (Mechanical, Aerospace and Nuclear Engineering Department, University of California, Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 1552-1570(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Described are procedures to be followed in applying cross-section sensitivity and uncertainty analysis to arrive at estimates for the uncertainty associated with an integrated reactor performance parameter R. Means to reduce such uncertainty are outlined. The pertaining computational codes used as analytical tools to carry out the cross-section sensitivity/ uncertainty analysis are reviewed with emphasis on their current limitations and possible improvements. The range of the uncertainty in the prediction of the tritium breeding ratio TBR due exclusively to current uncertainties in the nuclear data field is presented as an application for the sensitivity and uncertainty methods and codes.

31126 **Technical benefit of an international project.** Flanagan, C.A. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1297-1300(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

One critical issue examined in the present phase of the International Tokamak Reactor (INTOR) has been an evaluation of the technical benefit of dividing up the design and component production tasks of all major advanced technologies among all participants. Two approaches were evaluated: (a) a "splitting" approach in which each country provides 1/4 of the components of each major system (e.g., 3 of 12 TF coils), (b) a "branching" approach in which each country provides all components of selected major systems (e.g., first country provides all TF coils, second country provides all torus sectors, etc.). Quantitative cost and schedule estimates were developed for each of the two approaches and compared to the cost and schedule of the entire device if it were produced only by one country. The results of the U.S. evaluation indicated that the ratio of total estimated cost to the "national" cost was 1.66 for "splitting" and 1.20 for "branching." The cost per participant was 0.41 and 0.30, respectively. The increase in the construction schedule was estimated to be 2.6 years.

31127 **Tokamak Fusion Core Experiment facilities Functional and Operational Requirements.** Commander, J.C. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1301-1305(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A team of national laboratory, university, and industrial participants completed the preconceptual design for the Tokamak Fusion Core Experiment (TFCX), a long pulse, plasma ignition machine, and required support facilities. Functional and Operational Requirements (F & ORs) for the TFCX support facilities were developed as the basis for the preconceptual design, ensuring that adequate housing and site would be provided to support the tokamak machine and auxiliary systems. This paper presents partial F & ORs developed for the base case TFCX machine, the nominal superconducting option (liquid helium-cooled magnets), and describes the resulting preconceptual design.

31128 **Evolution of the Fusion Power Demonstration tandem mirror reactor configuration.** O'Toole, J.A.; Lousteau, D.C. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1306-1311(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

This paper gives a presentation of the evolution of configurations proposed for tandem mirror Fusion Power Demonstration (FPD) machines. The FPD study was undertaken to scope the mission as well as the technical and design requirements of the next tandem mirror device. Three configurations, entitled FPD I, II, and III were studied. During this process new systems were conceived and integrated into the design, resulting in a significantly changed overall machine configuration. The machine can be divided into two areas. A new center cell configuration, minimizing magnetic field ripple and thus maximizing center cell fusion power, features a semicontinuous solenoid. A new end cell has evolved which maintains the required thermal barrier in a significantly reduced axial length. The reduced end cell effective length leads to a shorter central cell length being required to obtain minimum ignition conditions. Introduced is the concept of an electron mantle stabilized octopole arrangement. The engineering features of the new end cell and maintenance concepts developed are influenced to a great extent by the octopole-based design. The new ideas introduced during the FPD study have brought forth a new perspective of the size, design, and maintenance of tandem mirror reactors, making them more attractive as commercial power sources.

31129 **Overview of the Fusion Power Demonstration study.** Nelson, W.D.; Doggett, J.N.; Logan, B.G.; Lousteau, D.C.; O'Toole, J.A.; Perkins, L.J. (Fusion Engineering Design Center, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1312-1317(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

This paper summarizes the 1984 Fusion Power Demonstration (FPD) design study. Three major configurations were investigated. Two were based on the Mirror Advanced Reactor Study (MARS) end cells, which use "C" coil magnets in Yin-Yang pairs to help stabilize the plasma. The third configuration utilized an octopole in the end cell. Detailed studies of major components were undertaken and critical issues were identified and examined. Integrated configuration drawings of each of the machines were prepared and are presented here. A Tandem Mirror Reactor Systems Code (TMRSC) was assembled for use in optimizing future device designs but will not be discussed. The various sections of this paper address the mission, goals, and brief design descriptions of the three configurations.

31130 **Modeling and optimization of operating parameters for a test-cell option of the Fusion Power Demonstration-II tandem mirror design.** Haney, S.W.; Fenstermacher, M.E. (Massachusetts Institute of Technology, Cambridge, MA). *Fusion Technology;* 8: No. 1, 1324-1329(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Models of tandem mirror devices operated with a test-cell insert have been used to calculate operating parameters for FPD-II+T, an upgrade of the Fusion Power Demonstration-II device. Two test-cell configurations were considered, one accommodating two 1.5 m blanket test modules and the other having four. To minimize the cost of the upgrade, FPD-II+T utilizes the same coil arrangement and machine dimensions outside of the test cell as FPD-II, and the requirements on the end cell systems have been held near or below those for FPD-II. The maximum achievable test cell wall loading found for the short test-cell was 3.5 MW/m^2 while 6.0 MW/m^2 was obtainable in the long test-cell configuration. The most severe limitation on the achievable wall loading is the upper limit on test-cell beta set by MHD stability calculations. Modification of the shape of the magnetic field in the test-cell by improving the magnet design could raise this beta limit and lead to improved test-cell performance.

31131 **A comparison of all-remote and personnel access maintenance operations for INTOR.** Sumpinato, P.T.; Finn, P.A.; Gohar, M.Y.; Stasko, R.R. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 308-313(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The INTOR reference design was developed to permit limited maintenance operations external to the reactor in a "hands-on" mode; all internal operations would be remotely accomplished. The design embodies those requirements for shielding, tritium containment and cleanup, and confinement of contaminated particulate matter to permit personnel access. The cost reflects these requirements, at least to first order. The impact of personnel access on the reactor design and its cost are cause to reexamine the maintenance

approach on which much of the present configuration is based. The purpose of this study is to compare the benefits and costs associated with personnel access maintenance procedures to those associated with all-remote maintenance procedures and to identify modifications to the baseline design that could enhance maintenance operations.

31132 **U.S. Blanket Technology Programs.** Nygren, R.E. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 511-524(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Experimental research in U.S. programs related to blanket technology is described through brief summaries of the objectives, facilities, recent experimental results and principal investigators for the Blanket Technology Program, TRIO-1 Experiment, TSTA, Fusion Hybrid Program and selected activities in the Fusion Materials and Fusion Safety Programs in neutronics research.

31133 **Nuclear performance optimization of the Be/Li/Th blanket for the fusion breeder.** Lee, J.D.; Bandini, B.R. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 483-490(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

More rigorous nuclear analysis, including treatment of resonance self-shielding effects coupled with an optimization procedure, has resulted in improved performance of the Be/Li/Th blanket. Net U-233 breeding ratio has increased 36% (to 0.84) while at an average U-233/Th ratio of 0.5 a/o average energy multiplication has increased only 12% (to 2.1) compared with earlier results.

31134 **Test requirements for solid breeder blanket thermal behavior.** Taghavi, K.; Gierszewski, P. (Mechanical, Aerospace and Nuclear Engineering Department, University of California at Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 525-530(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Testing of solid breeder blanket issues may be constrained by available test device parameters such as heat source and pulse length. Consequently, it is important to consider methods to preserve full-reactor conditions under reduced device parameters. Analyses of several aspects of solid breeder thermal behavior were performed to explore options for scaling this behavior and to identify limits on the test device parameters beyond which test results would not reasonably extrapolate to reactor conditions. The results suggest that solid breeder blankets need at least 1 MW/m^2 neutron wall load, 0.2 MW/m^2 surface heat load and 500 s burn length.

31135 **Nuclear responses in INTOR plasma stabilization elements.** Gohar, Y.; Gilligan, J.; Jung, J.; Mattas, R.F.; Miley, G.H.; Wiffen, F.W.; Yang, S. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 565-572(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Nuclear responses in the plasma stabilization elements were studied in a parametric fashion as a part of the transient electromagnetics critical issue C of ETR/INTOR activity. The main responses are neutron fluence and radiation dose in the insulator material, induced resistivity and atomic displacement in the conductor material, nuclear heating and life analysis for the elements. Copper and aluminum conductors with either $MgAl_2O_4$ or MgO insulating material were investigated. Radiation damage and life analysis for these elements were also discussed.

31136 **Elastic-plastic analysis of slender first wall structures.** Orient, G.E.; Garner, J.K.; Gierszewski, P.J. (University of California at Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 586-591(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Several current fusion first wall designs consist of slender channels. This type of structure may be analysed by describing the bending behavior using a thin member theory and solving the relevant boundary value problem for the axial stresses due to the end conditions and the axial load variations. Analytical and finite element models are presented here that can treat a range of shapes and end constraints, have been implemented on microcomputers, and may be fast and cost-effective tools for preliminary design. Representative first wall designs are analyzed, illustrating the complex and important influence of irradiation creep.

31137 **Solid breeder/structure mechanical interaction and thermal stability.** Liv, Y.Y.; Billone, M.C.; Taghavi, K. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 630-636(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Solid breeder/structure mechanical interaction (BSMI) during fusion reactor blanket operation is a potential failure mode which could limit the lifetime of the blanket. The severity of BSMI will generally depend on the materials, specific blanket designs, and blanket operating conditions. Thermomechanical analyses performed for a helium-cooled blanket employing Li_2O/HT-9 plates indicate that BSMI could be a serious concern for this blanket.

31138 **Poloidal divertor systems for impurity and particle control in ignition Tokamaks.** Post, D.E.; Mattas, R. (Plasma Physics Laboratory, Princeton University, Princeton, NJ). *Fusion Technology;* 8: No. 1, 779-790(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Poloidal divertors and pumped limiters are the leading candidates for impurity and particle control systems for ignited tokamaks. Such systems must be able to provide heat removal and He pumping while satisfying the requirements for minimum plasma contamination by impurities, reasonable component lifetime (α 1 year), and minimum size and cost and maximum simplicity. The advantage of poloidal divertor systems is that they offer the possibility of low sputtering rates for the first wall components and modest pumping requirements due to the formation of a cool, dense plasma near the collector plates. Estimates made as part of the INTOR study indicate that the sputtering rates for pumped limiters could be unacceptably large. A engineering design study of a poloidal divertor system for an ignited tokamak indicates that such a system offers a reasonable solution to the impurity and particle control problem at only a modest increase in total reactor cost (about 7%) and complexity compared to a pumped limiter system.

31139 **The engineering and material aspects of impurity control systems.** Koski, J.A. (Sandia National Laboratories, Albuquerque, NM). *Fusion Technology;* 8: No. 1, 791-799(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The design of impurity control systems for fusion energy devices is discussed from the engineering and materials viewpoint. First, examples of impurity control devices are presented, and the plasma edge environment for which they are designed is briefly described. Materials concerns related to the design of the components are discussed and some currently proposed designs presented. Engineering tools available to the designer are listed, and some commonly encountered engineering analysis problems described.

31140 **A molten salt cooling 17Li-83Pb breeding blanket concept.** Sze, D.K.; Cheng, E.T. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 953-957(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A description of a fusion breeding blanket concept using draw salt coolant and static 17Li-83Pb is presented. 17Li-83Pb has high breeding capability and low tritium solubility. Draw salt operates at low pressure and is inert to water. Corrosion, MHD, and tritium containment problems associated with the MARS design are alleviated because of the use of a static LiPb blanket. Blanket tritium recovery is by permeation toward the plasma. A direct contact

steam generator is proposed to eliminate some generic problems associated with a tube shell steam generator.

31141 **Modeling of tritium transport in lithium aluminate fusion solid breeders.** Billone, M.C.; Clemmer, R.G. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 875-880(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Lithium aluminate is a candidate tritiumbreeding material for fusion reactor blankets. One of the concerns with using $LiAlO_2$ is tritium recovery from this material, particularly at low operating temperatures and high fluences. The data from various tritium release experiments with γ-$LiAlO_2$ and related materials are reviewed and analyzed to determine under what conditions bulk diffusion is the rate-limiting mechanism for tritium transport and what the effective bulk diffusion coefficient should be. Steady-state and transient models based on bulk diffusion are developed and used to interpret the data. Design calculations are then performed with the verified models to determine the steady-state inventory and time to reach equilibrium for a full-scale fusion blanket.

31142 **Thermochemical comparison of the effectiveness of protium purging of fusion breeders.** Fischer, A.K.; Johnson, C.E. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 871-874(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The tritium breeders for a fusion reactor, Li_20, $LiAlO_2$, and Li_4SiO_4, are compared on a thermochemical basis in respect to their response to protium purging. Two oxygen activity levels, established by H_2O:H_2 ratios of 100: 1 and 1:100 are considered at the temperatures 900 and 1300K. In terms of tritium release (all gaseous forms), $LiAlO_2$ is better than Li_20 and this in turn better than Li_4SiO_4. At 900K, Li_20 and $LiA10_2$ release more tritium than at 1300K. Li_4SiO_4 releases more tritium at 1300K than at 900K.

31143 **Design of a helium-cooled molten-salt fusion breeder.** Moir, R.W.; Berwald, D.H.; DeVan, J.H.; Fulton, F.J.; Grimes, W.R.; Lee, J.D.; Muegei, F.; Neef, W.S.; Sherwood, A.E.; Whitley, R.H. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 465-473(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A new conceptual blanket design for a fusion reactor produces fissile material for fission power plants. Fission is suppressed by using beryllium, rather than uranium, to multiply neutrons and also by minimizing the fissile inventory. The molten-salt breeding media is circulated through the blanket and on to the online processing system, where ^{233}U and tritium are continuously removed. Helium cools the blanket including the steel pipes containing the molten salt. Austenitic steel was chosen because of its ease of fabrication, adequate radiation-damage lifetime, and low corrosion rate by molten salt. We estimate the breeder, having 3000 MW of fusion power, produces 6400 kg of ^{233}U per year, which is enough to provide make up for 20 GWe of LWR per year (or 14 LWR plants of 4440 MW /sub t/) or twice that many HTGRs or CANDUs. Safety is enhanced because the afterheat is low and the blanket materials do not react with air or water. The fusion breeder based on a pre-MARS tandem mirror is estimated to cost $4.9B or 2.35 times an LWR of the same power. The estimated present value cost of the ^{233}U produced is)40/g if utility financed or)16/g if government financed.

31144 **Counter current extraction system for tritium recovery from 17Li-83Pb.** Sze, D.K. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 887-890(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A counter current extraction system is proposed here to recover tritium from 17Li-83Pb. The multiple stage extraction system is used to reduce the resistance to the molecular diffusion in the liquid phase, while a counter current helium purge gas is used to reduce the resistance in the gas phase. To reduce the purge gas requirement and alleviate the tritium containment problem, hydrogen is added to the purge gas. An isotope separation system is designed to separate the hydrogen from the tritium.

31145 **A systematic methodology for estimating direct capital costs for blanket tritium processing systems.** Finn, P.A. (Chemical Technology Division, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 904-910(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

This paper describes the methodology developed for estimating the relative capital costs of blanket processing systems. The capital costs of the nine blanket concepts selected in the Blanket Comparison and Selection Study are presented and compared.

31146 **Thermal-hydraulic thermomechanical testing of solid breeder blanket modules using microwave energy.** Misra, B.; Kustom, R.L.; Nygren, R.E.; Poeppel, R.B. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 927-930(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

An experimental program is undertaken to assess whether microwave energy can be used to study the thermomechanical response of solid breeder blanket modules. The experimental setup consists of a water-cooled Y-$LiA10_2$ solid breeder blanket module heated by a 10-kW Klystron at 200 MHz. The spatial distribution of temperature at a series of power levels will show whether microwave energy is attractive as a potential power source for nonnuclear testing of solid breeder blanket modules.

31147 **End cell shielding and streaming analysis of MARS tandem mirror reactor.** El-Guebaly, L.A. (University of Wisconsin, Madison, WI). *Fusion Technology;* 8: No. 1, 1043-1048(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

In recent studies of tandem mirror reactors some attention has been focused on the problems associated with radiation streaming into penetrations of both the central fusion chamber and the end cells. This work presents the radiation analysis for the end cells of the commercial tandem mirror reactor MARS. The amount of radiation streaming into the penetrations was quantified and the radiation problems at the direct convertor were analyzed.

31148 **Advanced inboard shielding design for Tokamak fusion reactors.** El-Guebaly, L.A.; Sawan, M.E. (Fusion Technaology Institute, University of Wisconsin-Madison, Madison, WI). *Fusion Technology;* 8: No. 1, 1037-1042(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The recent physics and technology advances in the field of high power density compact tokamak reactors have established the need for advanced inboard shielding design. This work presents the design of an optimal inboard shield and assesses the limits on the radiation effects in the magnets of a high wall loading (10 MW/m^2) tokamak design. A new material, boron hydride, was identified as a potential shielding material and more optimum combinations of TiH_2, B_4C, and W were identified as well.

31149 **TFCX shielding optimization.** Yang, S.; Gohar, Y. (Fusion Power-Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1012-1019(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Design analyses and tradeoff studies for the bulk shield of the Tokamak Fusion Core Experiment (TFCX) were performed. Several shielding options were considered to lower the capital cost of the shielding system. Optimization analyses were carried out to reduce the nuclear responses in the TF coils and the dose equivalent in the reactor hall one day after shutdown. Two TFCX de-

signs with different toroidal field (TF) coil configurations were considered during this work. The materials for the shield were selected based upon tradeoff studies and the results from the previous design studies. The main shielding materials are water, concrete, and steel balls (Fe1422 or Nitronic 33). Small amounts of boron carbide and lead are employed to reduce activation, nuclear heating in the TF coils, and dose equivalent after shutdown.

31150 **Shield design for next-generation, low-neutron-fluence, superconducting tokamaks.** Lee, V.D.; Gohar, Y. (Fusion Engineering Design Center/McDonnell Douglas Astronautics Company, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1001-1005(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A shield design using stainless steel (SST), water, boron carbide, lead, and concrete materials was developed for the next-generation tokamak device with superconducting toroidal field (TF) coils and low neutron fluence. A device such as the Tokamak Fusion Core Experiment (TFCX) is representative of the tokamak design which could use this shield design. The unique feature of this reference design is that a majority of the bulk steel in the shield is in the form of spherical balls with two small, flat spots. The balls are purchased from ball-bearing manufacturers and are added as bulk shielding to the void areas of builtup, structural steel shells which form the torus cavity of the plasma chamber. This paper describes the design configuration of the shielding components.

31151 **First wall and blanket design for a high wall loading compact tokamak power reactor.** Sviatoslavsky, I.N.; Abdel-Khalik, S.I.; Corradini, M.L.; El-Afify, M.; Huh, K.Y.; Kuleinski, G.L.; Wittenberg, L.J. (Fusion Technology Institute, University of Wisconsin-Madison, Madison, WI). *Fusion Technology;* 8: No. 1, 980-985(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Among the specific limitations which tend to complicate a compact high wall loading (HWL) tokamak reactor design are high surface and nuclear heating, compactness leading to crowded components, unlikely breeding on the inboard side and frequent first wall/blanket replacement. This paper describes the mechanical, thermal hydraulic and tritium aspects of an improved blanket design for a high β (20%), high wall loading (R 10 MW/m^2) compact fusion power reactor of 1000 MW /sub th/ power output.

31152 **A module for testing a lithium cooled tokamak blanket in a tandem mirror test reactor.** Garner, J.K.; Blanchard, J.; Madarame, H.; Orient, G.; Shin, K.; Taghavi, K.; Tillack, M.; Youssef, M. (TRW, Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 962-967(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A preliminary conceptual design was made of a test module for testing the BCSS lithium cooled, vanadium structure blanket concept in a tandem mirror fusion test reactor. The test module is intended to run at the correct stresses and temperatures of a segment of the blanket, while operating at reduced neutron wall loadings. Although this approach ties the effort to a single design and its issues, it tends to reveal interactions that might not be apparent if a more general approach were taken, and can lead to some useful general conclusions.

31153 **Impurity control and vacuum pumping system design and analysis for next-generation tokamaks.** Haines, J.R. (Fusion Engineering Design Center/Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1259-1268(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Impurity control system design and performance studies were performed in support of the Tokamak Fusion Core Experiment (TFCX) preconceptual design. Efforts concentrated on the pumped limiter and vacuum pumping system design configuration, thermal/mechanical and erosion lifetime performance of the limiter protective surface, and helium ash removal performance. Analysis results indicate that the limiter/vacuum pumping system design provides marginally adequate helium ash removal. Difficulties in providing adequate helium ash removal for more compact or higher fusionpower-density devices are addressed. Erosion, primarily by disruption-induced vaporization and/or melting, limits the protective surface lifetime to about one calendar year or only about 60 full-power hours of operation. In addition to evaluating impurity control system performance for nominal TFCX conditions, these studies attempt to focus on the key plasma physics and engineering design issues that should be addressed in future research and development programs.

31154 **Measurements and calculations of the leakage multiplication from hollow beryllium spheres.** Wong, C.; Bauer, R.W.; Haight, R.C.; Hansen, R.C.; Howerton, R.J.; Komoto, T.T.; Lee, J.D.; Perkins, S.T.; Plechaty, E.F.; Pohl, B.A. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1165-1173(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Using the Pulsed-Sphere Method, the leakage spectra from hollow Be spheres of 4.5, 13.8 and 19.9 cm thickness have been measured. The predicted copious production of epithermal and thermal neutrons from the 13.8 and 19.9 cm spherical shells has been verified. A quantitative comparison of measured and calculated time-of-arrival count spectra over the energy range from thermal to $\int$ 15 MeV indicates that the ENDL-84 library overestimates the leakage spectra between 2 and 10 MeV and in the epithermal and thermal energy regions. In the remaining regions, the leakage spectra are underestimated. Because of the above compensation the inferred leakage multiplication for the 19.9 cm Be is $\int$ 3% higher than calculations. In the case of the 13.8 cm Be, the compensation is less exact and the inferred leakage multiplication is $\int$ 9% higher than calculations.

31155 **MFTF-α+T shield design.** Gohar, Y. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1330-1338(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

MFTF-α+T is a DT upgrade option of the Tandem Mirror Fusion Test Facility (MFTF-B) to study better plasma performance, and test tritium breeding blankets in an actual fusion reactor environment. The central cell insert, designated DT axicell, has a 2-MW/m^2 neutron wall loading at the first wall for blanket testing. This upgrade is completely shielded to protect the reactor components, the workers, and the general public from the radiation environment during operation and after shutdown. The shield design for this upgrade is the subject of this paper including the design criteria and the tradeoff studies to reduce the shield cost.

31156 **Neutronics scaling in fusion test devices.** Shin, K.; Youssef, M.Z. (University of California, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 1443-1448(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A scaling factor for the neutronics parameters of the first wall was derived as a function of the plasma and first wall radii of fusion devices based on the simple albedo concept. The derived equation followed very well the scaling behavior of the heating rate and DPA obtained by ANISN as the device size was changed. The helium and hydrogen production rates were scaled with the rate /phi/ /sup uncol/ / J /sup uncol/. A simple expression for the azimuthal distribution of neutronics parameters in the first wall was derived. The applicability of the expression was verified by comparing the heating rate profiles given by the equation with those by Monte Carlo calculations in the first two different shapes.

31157 Experimental techniques and measurement accuracies. Bennett, E.F.; DiLorio, G.; Maekawa, H.; Nakamura, T.; Yule, T.J. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1535-1541(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A brief description of the experimental tools available for fusion neutronics experiments is given. Attention is paid to error estimates mainly for the measurement of tritium breeding ratio in simulated blankets using various techniques.

31158 Engineering scaling and quantification of the test requirements for fusion nuclear technology. Gierszewski, P.; Abdou, M.; Bell, G.; Billone, M.; Blanchard, J.; Garner, J.; Madarame, H.; Orient, G.; Shin, K.; Taghavi, K. (University of California at Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 1101-1108(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

For integrated testing of fusion nuclear components, it is likely that the test device parameters will not match the device parameters of a full scale fusion reactor because of cost constraints. This will result in changes in the behavior of the test module and limit the ability of the test to resolve key nuclear issues. However, it may be possible to modify the test module in order to retain the important aspects of the issues over a range of test device parameters. In order to understand and quantify this range and set requirements for blanket testing, analyses of several aspects of blanket operation were performed. The results suggest that a useful integrated test device should have at least 1 MW/m^2 neutron wall load, 0.2 MW/m^2 surface heat flux, 20% availability, 500 s burn length, and 0.5 m^2 by 0.3 m per test module.

31159 Flow characteristics of the Cascade granular blanket. Pitts, J.H.; Walton, O.R. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1838-1843(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Analysis of a single granule on a rotating cone shows that for the 35° half-angle, double-cone-shaped Cascade chamber, blanket granules will stay against the chamber wall if the rotational speed is 50 rpm or greater. The granules move axially down the wall with a slight (5-mm or less) sinusoidal oscillation in the circumferential direction. Granule chute-flow experiments confirm that two-layered flow can be obtained when the chute is inclined slightly above the granular material angle of repose. The top surface layer is thin and fast moving (supercritical flow). A thick bottom layer moves more slowly (subcritical flow controlled at the exit) with a velocity that increases with distance from the bottom of the chute. This is a desirable velocity profile because in the Cascade chamber about one-third of the fusion energy is deposited in the form of x rays and fusion-fuel-pellet debris in the top surface (inner-radius) layer.

31160 Tritium breeding material : o $LiAlO_2$. Rasneur, B. (CEA - CEN/SACLAY - IRDI/DESICP/DPC, Gif sur Yvette). *Fusion Technology;* 8: No. 1, 1909-1914(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Very homogeneous microtextures of porous $LiAlO_2$ have been prepared in a large range of porosity and elementary grain diameter in order to determine more easily the T_2 diffusion coefficient in the solid and optimize the best microstructure for the blanket. From this large field of homogeneous microstructures, empirical equations describing the properties of these porous bodies have been deduced, as a function of porosity, grain diameter and temperature, for instance : ultra sound velocity, Young's modulus, ultimate compressive strength, creep, thermal shock and electrical conductivity.

31161 An impurity control test facility (ICTF) for the study of fusion reactor/plasma edge materials. Brooks, J.N.; Ehst, D.A.; Hershkowitz, N.; Mattas, R.F. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1766-1771(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A test facility has been designed for investigating many of the impurity control issues associated with fusion reactors. The facility is a steady-state, RF-stabilized mirror with high field and high pumping capability end cells. Analysis indicates that the ICTF should readily produce a plasma with typical parameters of N /sub e/ = 3 x 10^{18} m^{-3}, T /sub e/ = 50 eV, and T /sub i/ = 100 eV at each end cell. A heat load of about 2 MW/m^2 over areas of about 1600 cm^2 could be produced at each end with 800 kW of ICRH power. These conditions would provide a unique capability for examining issues such as erosion/redeposition behavior, properties of redeposited materials, high recycling regimes, plasma edge operating limits for high-Z materials, and particle pumping efficiencies for limiter and divertor designs.

31162 Blanket optimization studies for cascade. Meier, W.R.; Morse, E.C. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1826-1831(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A nonlinear, multivariable, blanket optimization technique is applied to the Cascade inertial confinement fusion reactor concept. The thickness of a two-zone blanket, which consists of a BeO multiplier region followed by a $LiA10_2$ breeding region, is minimized subject to constraints on the tritium breeding ratio, neutron leakage, and heat generation rate in Al/SiC tendons that support the chamber wall.

31163 Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications. Brooks, J.N.; DeWald, A.B.; Gruen, D.M.; Krauss, A.R.; Mattas, R.F. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1275-1280(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A new approach to impurity control involves the development of materials displaying both strong surface segregation of a low-Z component and high secondary ion fractions in the sputtering of that component. Key issues that have been studied with particular reference to copper-lithium alloys relate to the completeness of the overlayer, its rate of formation in a reactor environment, lowering of substrate sputtering and self-sputtering yields, durability of the overlayer, and depletion of the bulk alloy in the low-Z component. Other factors that must be considered in the materials selection process relate to response to disruptions, heat transfer, thermal stress, fabricability, radiation damage, activation, and tritium permeation. Copper-lithium alloys have been evaluated as a surface material for the impurity control system of the INTOR reactor. Both the medium-edge temperature limiter regime and the low-edge temperature divertor regime were examined. The analysis used TRIM code data to predict sputtering coefficients for copper-lithium with a 1.5 monolayer coverage of lithium. The REDEP code was used to evaluate the erosion performance for INTOR.

31164 The Felix experiments: measurements of electromagnetic effects. Turner, L.R.; Evans, K.; Gunderson, G.R.; Kim, S.; Knott, M.J.; McGhee, D.G.; Praey, W.F.; Wehrle, R.B. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 2, 227-232(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Three major series of experiments have been conducted with the FELIX facility at ANL. Experiments on the coupling between eddy currents and angular displacements of loops and plates in crossed constant and changing magnetic fields demonstrated that the coupling effects reduced the peak currents and deflections.

These experiments were carried out by a team of investigators from Princeton Plasma Physics Laboratory (PPPL) and ANL and are reported elsewhere. Experiments measuring eddy current effects in flat plates provided data to validate 2-D and 3-D eddy current computer codes. Experiments measuring eddy current effects in hollow cylinders with different ratios of thickness to diameter explored the limitations of using 2-D codes to model 3-D geometries. The plate and cylinder experiments are described in detail.

31165 **System studies of commercial Tokamak reactors with resistive magnets.** Le Claire, R.J.; Bomberg, L.; Cohn, D.R.; Potok, R.E.; Yang, T.F. (MIT Plasma Fusion Center, Cambridge, MA). *Fusion Technology;* 8: No. 1, 327-331(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Scoping studies were performed to evaluate the potential of resistive magnet tokamaks for commercial electricity producing applications. Attractive options have been identified which are characterized by moderate wall loading, low field, moderate recirculating power, moderate to high toroidal β, compact nuclear islands and costs competitive with those of comparable superconducting options. Resistive magnet commercial tokamaks operating in the second region of stability in β appear particularly attractive. Several methods are investigated here for achieving second stability, including hot electron and hot ion stabilization of the MHD modes during start-up.

31166 **TFCX current density and nuclear heating limitations for superconducting Tokamaks.** Kalsi, S.S. (Fusion Engineering Design Center/Grumman Aerospace Corporation, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 344-349(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A major goal of the Tokamak Fusion Core Experiment (TFCX) study was to minimize the size of the device and achieve lowest cost. Two key factors influencing the size of the device employing superconducting magnets are toroidal field (TF) winding current density and its nuclear heat load withstand capability. Lower winding current density requires larger radial build of the winding pack. Likewise, lower allowable nuclear heating in the winding requires larger shield thickness between the plasma and coil. To achieve a low-cost device, it is essential to maximize the winding's current density and nuclear heating withstand capability. To meet this objective, the TFCX design specification adopted as goals a nominal winding current density of 3500 A/cm^2 with 10-T peak field at the winding, peak nuclear heat load limits of 1 mW/cm^3 for the nominal design and 50 mW/cm^3 for an advanced design. This study developed justification for these current density and nuclear heat load limits.

31167 **The role of fusion reaction products in the stability of EBT reactors.** Wojtowicz, D.; Kammash, T. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 637-640(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The potential of the EBT plasma confinement device as a fusion reactor depends critically on its ability to support a sufficiently large power density which in turn means a large enough beta defined as the ratio of the plasma pressure to magnetic field pressure. The maximum allowable beta is generally dictated by the stability of the system to hydromagnetic (MHD) modes. In this paper we examine the stability of such modes for a D-T plasma and assess the effect of the alpha particles on these instabilities. We find that the alphas have the most destabilizing effect, as reflected in the drop of the ion beta, at the instant of birth and that recovery of stability is achieved as the alphas approach equilibration with the ions of the plasma. In short, there appears to be no serious adverse effects on the reactor beta resulting from alpha-induced instabilities.

31168 **Plasma engineering for MINIMARS: a small commercial tandem mirror reactor with octopole plugs.** Perkins, L.J.; Blackfield, D.T.; Campbell, R.B.; Devoto, R.S.; Johnston, B.H.; Logan, B.G. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 685-692(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

With the employment of a novel octopole end plug scheme, we examine the plasma engineering design of MINIMARS, a small compact fusion reactor based on the tandem mirror principle. With a net electric output of 600 MW /sub e/, MINIMARS is expressly designed for short construction times, factory built modules, and a passively safe blanket system. We show that the compact octopole/mantle provides several distinct improvements over the more conventional quadrupole (yin-yang) end plugs and enables ignition to be obtained with much shorter central cell length. In this way we can design economic small reactors which will minimize utility financial risk and provide attractive alternatives to the conventional larger fusion plants encountered to date.

31169 **Design of aggressive superconducting TFCX magnet systems.** Miller, J.R. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 829-837(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

An investigation of several fundamental limits of machine design indicate that a machine fitting the specifications of the Tokamak Fusion Core Experiment (TFCX) can be built with both a superconducting toroidal field (TF) coil set and a plasma major radius of less than 3.2 m. This small size is achieved by accepting a peak nuclear heat load of 50 kW°m^{-3} in the TF coil inner leg while operating at a 10-T maximum field with a current density of 35 A°mm^{-2} in the winding pack. This performance, high by traditional standards, is justified based on developments in forced flow conductor technology using Nb_3Sn composite superconductors.

31170 **Experience with operation of a large magnet system in the international fusion superconducting magnet test facility.** Fietz, W.A.; Ellis, J.F.; Haubenreich, P.N.; Schwenterly, S.W.; Stamps, R.E. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 817-822(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Superconducting toroidal field systems, including coils and ancillaries, are being developed through international collaboration in the Large Coil Task. Focal point is a test facility in Oak Ridge where six coils will be tested in a toroidal array. Shakedown of the facility and preliminary tests of the first three coils (from Japan, Switzerland, and the U.S.) were accomplished in 1984. Useful data were obtained on performance of the helium refrigerator and distribution system, power supplies, control and data acquisition systems and voltages, currents, strains, and acoustic emission in the coils. Performance was generally gratifying except for the helium system, where improvements are being made.

31171 **Partial-array test results in IFSMTF.** Lue, J.W.; Dresner, L.; Koizumi, K.; Lubell, M.S.; Luton, J.N.; Shen, S.S.; Zahn, G.R.; Zichy, J.A. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 807-816(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Preliminary performance tests of two large super conducting magnets have been carried out in the International Fusion Superconducting Magnet Test Facility (IFSMTF). Each of the Japanese (JA) and General Dynamics/Convair (GD) coils was operated up to its full design current of 10.2 kA with the other serving as an adjacent background coil at 40% of design current. Cryostatic stability was demonstrated for both coils by noting recovery from a full half-turn (5 m) driven normal. A new pick-up coil compensation scheme was successfully used for the quench detection system.

Each coil remained superconducting when the other was dumped. Unique instrumentation was used to measure changes in bore dimensions and displacement of the winding from the coil case. Agreement between structural analysis and measurement of bore dimension changes resulting from magnetic loads is good. The Swiss (CH) coil underwent only a cryogenic test. The forced cooling worked well and an inlet temperature of 3.8 K was demonstrated.

31172 **A demountable toroidal field coil system for a commercial tokamak reactor.** Yang, T.F.; Bobrov, E.S.; Bomberg, L.; Cohn, D.R.; LeClaire, R.J.; Williams, J.E.C. (MIT Plasma Fusion Center, Cambridge, MA). *Fusion Technology;* 8: No. 1, 838-842(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A conceptual design for a demountable TF coil is presented. The work is being pursued as part of an ongoing study of the Resistive Magnet Commercial Tokamak Reactor (RCTR) at MIT. The RCTR is an attractive commercial tokamak option which utilizes resistive magnets characterized by low stresses, low current density and moderate dissipated power. The demountable coil design for RCTR presented here features a relatively simple configuration with a large cross-section available for current transfer in the joint. The concept allows for complete removal of the TF coil with the blanket/first wall in place. Analysis also indicates significant advantages for the overall RCTR concept due to the possibility of placement of the EF and OH coils within the TF bore. These advantages include reduced PF coil size, dissipated power and TF overturning.

31173 **Compact minimum cost ignition test reactor.** Cohn, D.R.; Bell, G.; Berwald, D.; Bobrov, E.; Bromberg, L.; Kohse, G.; Listvinsky, G.; Wagner, C.; Williams, J.E.C.; Witt, R. (MIT Plasma Fusion Center, Cambridge, MA). *Fusion Technology;* 8: No. 1, 1291-1296(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

In this paper we describe a design of an ignition test reactor based on the LITE concept. The main objective of the device is to study key physics issues of ignited plasma operation. LITE-type devices are characterized by toroidal field coils of plate magnet construction. The plates form a continuous structure in the throat of the magnet. The inplane loads are supported by the conductor, while the out-of-plane loads are supported by external frames. The magnet is designed for operation at relatively high stresses and magnetic fields. There is little or no shielding between the vacuum vessel and the magnet. This type of design results in a compact machine.

31174 **Two-dimensional TBR calculations for conceptual Compact Reversed-Field Pinch Reactor blanket.** Davidson, J.W.; Battat, M.E.; Dudziak, D.J. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1503-1510(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A detailed two-dimensional nucleonic analysis was performed for a conceptual first wall, blanket, and shield design for the Compact Reversed-Field Pinch Reactor. The design includes significant two-dimensional aspects presented by the limiter, vacuum ducts, and coolant manifolds; these aspects seriously degrade the tritium-breeding reaction (TBR) predicted by one-dimensional calculations. A range of design change to increase the TBR were investigated within the two-dimensional analysis. The results of this investigation indicated that an adequate TBR could be achieved with a thinner copper first wall, a ^{6}Li enrichment near 90%, the proper selection of reflector, and a small addition to the blanket thickness, determined by the one-dimensional analysis.

31175 **Fusion-power-core design of a compact Reversed-Field Pinch Reactor (CRFPR).** Copenhaver, C.; Battak, M.E.; Cappiello, C.; Chaffee, A.D.; Davidson, J.W.; Hayenson, R.L.; Krakowski, R.A.; Lujan, R.E.; Mynard, R.C.; Schnurr, N.M. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1590-1595(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A conceptual design of a fusion power core (FPC, i.e., plasma chamber, first wall, blanket, shield, coils) based on a Reversed-Field Pinch (RFP) has been completed. After a brief statement of rationale and description of the reactor configuration, the FPC integration is described in terms of power balance, thermal-hydraulics, and mechanical design. The engineering versatility, promise, and problems of this high-power-density approach to fusion are addressed.

31176 **A comparison study of toroidal-field divertors for a Compact Reversed-Field Pinch Reactor.** Bathke, C.G.; Krakowski, R.A.; Miller, R.L. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1616-1624(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Two divertor configurations for the Compact Reversed-Field Pinch Reactor (CRFPR) based on diverting the minority (toroidal) field have been reported. A critical factor in evaluating the performance of both poloidally symmetric and bundle divertor configurations is the accurate determination of the divertor connection length and the monitoring of magnetic islands introduced by the divertors, the latter being a three-dimensional effect. To this end the poloidal-field, toroidal-field, and divertor coils and the plasma currents are simulated in three dimensions for field-line tracings in both the divertor channel and the plasma-edge regions. The results of this analysis indicate a clear preference for the poloidally symmetric toroidal-field divertor. Design modifications to the limiter-based CRFPR design that accommodate this divertor are presented.

31177 **Status of the ZT-40M RFP experimental program.** Massey, R.S.; Baker, D.A.; Buchenauer, C.J.; Burkhardt, L.C.; Cayton, T.; Di Marco, J.N.; Downing, J.N.; Erickson, R.; Watt, R.G.; Weber, P.G. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1571-1580(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The present status of research on the ZT-40M Reversed-Field Pinch (RFP) will be described. RFP discharges have been sustained for times (27 ms) >> the classical resistive diffusion time, implying the existence of a flux-sustainment mechanism ("dynamo"). This mechanism opens the possibility for a steady-state RFP reactor utilizing a unique form of non-inductive current drive. T /sub e/ > 500 eV has been obtained for 400 kA discharges with $\bar{n}$ /sub e/ about 4 x 10^{19} m^{-3}. Total energy confinement time / tau/ /sub E/ has reached 0.7 ms with a Lawson parameter of 5 x 10^{16} m^{-3}s for discharges with $\bar{n}$ /sub e/ = 8 x 10^{19} m^{-3} and T / sub e/ = 330 eV at a plasma current of 330 kA and 0.33 T total confining field at the wall. Reactor-like $\beta\theta$ about 10-20% is routinely obtained for plasma currents from 60-400 kA (β about $\beta\theta/2$). Scaling of $\bar{n}$ /sub e/ /tau/ /sub E/ about I /sup 2.2+or-0.4/ is found, more than adequate for a compact RFP reactor.

31178 **Recent progress in stellarator reactor conceptual design.** Miller, R.L. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1581-1589(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Stellarator/Torsatron/Heliotron (S/T/H) class of toroidal magnetic fusion reactor designs continues to offer a distinct and in several ways superior approach to eventual commercial competitiveness. Although no major, integrated conceptual reactor design activity is presently underway, a number of international research efforts suggest avenues for the substantial improvement of the S/T/H reactor embodiment, which derive from recent experimental and theoretical progress and are responsive to current trends in fusion-reactor projection to set the stage for a "third generation" of designs. Recent S/T/H reactor design activity is reviewed and the impact of the changing technical and programmatic context on the direction of future S/T/H reactor design studies is outlined.

31179 **Steady-state spheromak reactor studies.** Hagenson, R.L.; Krakowski, R.A. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1606-1612(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

After summarizing the essential elements of a gun-sustained spheromak, the potential for a steady-state reactor is explored by means of a comprehensive physics/engineering/costing model. A range of cost-optimized reactor design points is presented, and the sensitivity of cost to key physics, engineering, and operational variables is reported.

31180 **Magnetics calculations for an ELMO Bumpy Square.** Santoro, R.T.; Schmitt, R.J.; Uckan, N.A. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1659-1663(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Calculations have been carried out to determine the vacuum magnetic parameters, forces, and the use of trim coils in an ELMO Bumpy Square. A configuration having five mirror coils per side and an eight-coil high-field toroidal solenoid corner assembly was studied. Favorable magnetic parameters are achieved in the device. An on-axis mirror ratio of 1.9, a global mirror ratio of 3.6, and excellent centering of plasma pressure contours are achieved. Particle losses are also minimal (<5%). The magnetic forces acting between coils are comparable with those encountered in the EBT-I/S magnet configuration. Circular trim coils were found to be suitable for restoring hot electron ring locations that are displaced when the coil currents are varied for performing magnetic studies or for assessing the effects on the EBS of the global mirror ratio.

31181 **Assessment of magnetic field asymmetries in ELMO Bumpy Square.** Uckan, T.; Uckan, N.A. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1664-1669(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

There exist two separate and independent magnetic field asymmetries in the ELMO Bumpy Square (EBS). One is associated with the small perturbations in the magnetic field, known as the field errors, caused by coil misalignments during installation, imperfection in coil winding, etc. The second source of asymmetry is the magnetic field ripple in the high-field toroidal solenoids (corners) produced by the finiteness of the number of coils. In general, these two sources of asymmetry introduce enhanced transport losses (in addition to other effects) to the system, although they affect different classes of particles. Toroidally passing (circulating) particles are influenced by the field errors, whereas trapped particles in the corners are influenced by the field ripple. In this paper we discuss these two effects separately and calculate the allowable magnitudes of the field error and field ripple in EBS, both for an experimental-size device and for a reactor.

31182 **Magnetic ripple correction in tandem mirrors by ferromagnetic inserts.** Hamilton, G.W. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1670-1675(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Magnetic ripple of 1% or more caused by discrete solenoid coils in the central cells of tandem mirrors may severely affect the MHD stability. The ripple amplitude can be reduced by an order of magnitude by ferromagnetic annuli inserted within the coils at the regions of ripple maxima. The inserts need not affect the accessibility, coil diameter, or capital cost, since large quantities of steel are required within the coils for the neutron blanket and shield. Design of the ripple correction is simplified and linearized by the cylindrical geometry and by the saturation of the ferromagnetic steel.

31183 **Hot spots in the inboard section of the TFCX toroidal field coils.** Yung, S.; Gohar, Y. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1682-1687(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The TFCX conceptual designs call for the construction of the reactor torus through the use of "pie-shaped" segments for mechanical and maintenance considerations. The use of this concept results in hot spots in the inboard section of the torodial field (TF) coils due to neutron and photon streaming through the slots between the segments. This work studies these effects on the nuclear responses in the TF coils and introduces design solutions to reduce the impact on the reactor design.

31184 **Octopole design concepts for the mirror end cell.** Kalsi, S.S. (Fusion Engineering Design Center/Grumman Aerospace Corporation, Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1703-1707(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A goal of minimum cost was pursued very strongly by the mirror project team. The team has concluded that a more compact and cost-effective end cell magnet system could be achieved by employing octopole magnets. Feasibility of an octopole end cell magnet design was studied as part of FY84 Fusion Power Demonstration (FPD) work under the direction of Lawrence Livermore National Laboratory (LLNL). This paper describes sizing and design studies of a superconducting octopole magnet. Magnetic field requirements were supplied by LLNL for the end cell region. Based on these requirements, the Fusion Engineering Design Center (FEDC) synthesized an end cell magnet system. The final end cell magnet system at the conclusion of the FPD study consisted of a 24-T choke coil, a small octopole, a large octopole, and a mirror circular coil. Many octopole magnet configurations were studied, but the final large octopole design consisted of four saddle coils. The saddle-shaped coils were preferred over other shapes for ease of fabrication. The paper describes the scoping design study of the saddle coil winding and its support structure. The support concept for interconnecting the four saddle coils (to form the octopole) is described. An octopole consisting of saddle coils can be fabricated using current conductors and coil winding technology.

31185 **Transient voltage oscillations in coils.** Chowdhuri, P. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1708-1716(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Magnet coils may be excited into internal voltage oscillations by transient voltages. Such oscillations may electrically stress the magnet's dielectric components to many times its normal stress. This may precipitate a dielectric failure, and the attendant prolonged loss of service and costly repair work. Therefore, it is important to know the natural frequencies of oscillations of a magnet during the design stage, and to determine whether the expected switching transient voltages can excite the magnet into high-voltage internal oscillations. The series capacitance of a winding significantly affects its natural frequencies. However, the series capacitance is difficult to calculate, because it may comprise complex capacitance network, consisting of intra- and inter-coil turn-to-turn capacitances of the coil sections. A method of calculating the series capacitance of a winding is proposed. This method is rigorous but simple to execute. The time-varying transient voltages along the winding are also calculated.

31186 **Impact of a poloidal divertor in ignition tokamak design.** Strickler, D.J.; Brown, T.G.; Dabiri, A.E.; Lee, V.D.; Miller, J.B.; Peng, Y.-K.M. (FEDC/Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1753-1759(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

System design studies were performed to assess the effect of assuming a poloidal divertor instead of a limiter as a means of impurity control for ignition tokamak configurations. Results show that for the nominal Tokamak Fusion Core Experiment (TFCX) device with superconducting TF coils, a feasible poloidal divertor configuration can be obtained without increasing the major radius.

In the TFCX nominal copper TF coil device, however, field limits at the PF coils are exceeded when the effects of asymmetry associated with a poloidal divertor are included. It was found that a 12% increase in the major radius of this device is necessary to simultaneously satisfy the plasma-shaping requirements of a poloidal divertor and the magnetics constraints at the superconducting PF coils.

31187 **Multivariable current control for electrically and magnetically coupled superconducting magnets.** Owen, E.W.; Shimer, D.W. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1801-1806(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Superconducting magnet systems under construction and projected for the future contain magnets that are magnetically coupled and electrically connected with shared power supplies. A change in one power supply voltage affects all of the magnet currents. A current controller for these systems must be designed as a multivariable system. The paper describes a method, based on decoupling control, for the rational design of these systems. Dynamic decoupling is achieved by cross-feedback of the measured currents. A network of gains at the input decouples the system statically and eliminates the steady-state error. Errors are then due to component variations. The method has been applied to the magnet system of the MFTF-B, at the Lawrence Livermore National Laboratory.

31188 **Modeling and optimization of a test-cell upgrade for MFTF-B operating in the high neutron wall loading mode.** Fenstermacher, M.E. (TRW Inc., Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1318-1323(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Models of the plasma particle and power balances in a tandem mirror with a high-field test-cell insert in the central cell have been used to calculate operating points for test-cell upgrades of the MFTF-B configuration. The code results have been benchmarked against the proposal plasma parameters for the MFTF-α+T configuration operating in the high neutron wall loading mode. Some parametric studies have been done. Using the results from these parametrics an optimized set of operating parameters for an MFTF-α+T-like configuration with a test-cell which will accommodate two 1.5 m long blanket test modules has been generated. This operating point has the same test-cell neutron wall loading as the original configuration and lower input powers to other systems in the device. The neutral beam power per unit blanket module length is also somewhat reduced in the optimized case.

31189 **Fragmentation of suddenly heated liquids in ICF reactors.** Blink, J.A.; Hoover, W.C. (Lawrence Livermore National Laboratory and University of California at Livermore-Davis, Livermore, CA). *Fusion Technology;* 8: No. 1, 1844-1849(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Fragmentation of free liquids in Inertial Confinement Fusion reactors could determine the upper bound on reactor pulse rate because increased surface area will enhance the cooling and condensation of coolant ablated by the fusion x rays. Relaxation from the suddenly (neutron) heated state will move a liquid into the negative pressure region under the liquid-vapor P-V dome. The resulting expansion in a diverging geometry will hydrodynamically force the liquid to fragment, with vapor then forming from the new surfaces to fill the cavities. An energy minimization model is used to determine the fragment size that produces the least amount of non-fragment-center-of-mass energy; i.e., the sum of the surface and dilational kinetic energies. This model predicts fragmentation dependence on original system size and amount of isochoric heating as well as liquid density, Gruneisen parameter, surface tension, and sound speed. A two dimensional molecular dynamics code was developed to test the model at a microscopic scale for the Lennard-Jones fluid with its two adjustable constants chosen to represent lithium. The numerical experiments produced reasonable agreement with the model. Considerable fragmentation is predicted in the high energy density HYLIFE reactor, with minimum fragmentation in other (low energy density) reactors.

31190 **Liquid to gas leak ratios with liquid nitrogen and liquid helium.** Batzer, T.H.; Call, W.R. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1281-1283(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

To predict the leak rates of liquid helium and liquid nitrogen containers at operating conditions we need to know how small leaks (10^{-8} to 10^{-5} atm-cm^3 air/s), measured at standard conditions, behave when flooded with these cryogens. Two small leaks were measured at ambient conditions (about 750 Torr and 295 K), at the normal boiling points of LN_2 and LHe, and at elevated pressures above the liquids. The ratios of the leak rates of the liquids at ambient pressure to the gases at ambient pressure and room temperature are presented. The leak rate ratio of LN_2 at elevated pressure was linear with pressure. The leak rate ratio of LHe at elevated pressure was also linear with pressure.

31191 **Material and electromagnetic properties of Faraday shields for ion cyclotron heating antennas.** Hoffman, D.J.; Baity, F.W.; Becraft, W.R.; Caughman, J.B.O.; Tsai, C.C. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 392-399(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Faraday shields for ion cyclotron antennas must transmit magnetic waves and absorb little RF power. To investigate these properties, we have constructed 27 Faraday shields in many configurations, including chevrons, tubes, straps, concentric rings, various layered shields, conventionally leafed straps, and replicas of the Faraday shields for ASDEX, the Joint European Torus (JET), TEXTOR, and Alcator-C. We have measured the magnetic flux and observed loading at various operating resistances by using dielectric sheets or magnetic-coupled loads. Each Faraday shield effects a net change in the characteristic inductance of the antenna, resulting in a reduction of wave coupling. However, the load experienced by the antenna is not always reduced because the Faraday shield itself acts as a load. We differentiate between these effects experimentally. The net result of the study is that the Faraday shields now in use cost up to a factor of 50% of coupling. This, of course, reduces the power handling capability by 50% as well. However, configurations exist that are easily cooled and result in a reduction of less than 5% in loading.

31192 **Radio frequency vacuum feedthroughs for high-power ICRF heating applications.** Owens, T.L.; Baity, F.W.; Hoffman, D.J.; Whealton, J.H. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 381-386(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Frequently, high-power pulsed ion cyclotron range of frequency experiments are limited by breakdown at the vacuum feedthrough. This paper describes the development and testing of vacuum feedthroughs to increase both reliability and capability. The ultimate goal of the program is to develop a continuous-wave feedthrough for the next generation of fusion experiments. A feedthrough concept currently under investigation consists of a simple, cylindrical alumina ceramic brazed between tapered coaxial conductors. A prototype has been tested to voltage levels in excess of 100 kV for 100-ms pulses and 70 kV for 5-s pulses at 28 MHz. Insertion-voltage-standing-wave ratios are $<$1.15:1 for frequencies below 450 MHz. An upgraded water-cooled version being fabricated for use on TEXTOR will be described.

31193 **Experimental measurements of the ion cyclotron antennas' coupling and RF characteristics.** Hoffman, D.J.; Baity, F.W.; Becraft, W.R.; Caughman, J.B.O.; Owens, T.L. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 411-419(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Ion cyclotron resonance heating (ICRH) is expected to become the dominant contributor to the supplemental heating needs of plasmas in future toroidal devices. The severity of the environ-

ments that will be imposed on the ICRH antennas by the plasma in such devices requires the investigation of different approaches to providing adequate life and reliability in addition to the necessary coupling. This work, which is part of the National Ion Cyclotron Heating Program, addresses these issues. The rf coupling capabilities and characteristics of various antennas have been measured. The tested antenna configurations include the simple loop antenna operated at resonant lengths as used on Alcator-C, the cavity antenna proposed for Doublet III-D, and the resonant double loop, asymmetric resonant double loop, and U-slot antennas. Models of the voltage, magnetic fields outside the structure, and current have been correlated with the measurements made on these antennas. From these measurements and from typical observations of ICRH coupling in tokamaks, we are studying power and frequency limitations on each antenna and the causes of the limitations. A comparison of the technology, performance, and power limitations of each type of antenna is presented.

31194 **The Advanced Toroidal Facility (ATF).** Thompson, P.B. (Oak Ridge National Laboratory, Fusion Energy Division, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 450-458(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Advanced Toroidal Facility (ATF) is a new magnetic plasma confinement device, under construction at Oak Ridge National Laboratory (ORNL), which will lead to improvements in toroidal magnetic fusion reactors. ATF is a type of stellarator known as a torsatron which theoretically has the capability to operate at ≧8% beta in steady state. The ATF plasma has a major radius of 2.1 m, an average minor radius of 0.3 m, and a field of 2 T for a 5-s duration or 1 T steady state. The ATF device consists of a helical field (HF) coil set, a set of poloidal field (PF) coils, an exterior shell structure to support the coils, and a thin, helically contoured vacuum vessel inside the coils. The ATF replaces the ISX-B tokamak at ORNL and will use the ISX-B auxiliary systems, including 4 MW of neutral injection heating and 0.2 MW of electron cyclotron heating. ATF is scheduled to start operation in the fall of 1986. An overview of the ATF device is presented, including details of the construction process envisioned.

31195 **Materials problems for highly irradiated ICRH Launchers in fusion reactors.** El-Guebaly, A. (Fusion Technology Institute, University of Wisconsin, Madison, WI). *Fusion Technology;* 8: No. 1, 553-558(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The recent advances in radiofrequency (RF) heating have led to the use of substantial amounts of RF power for startup and heating. The RF heating system requires a number of ceramics for coaxial feedthrough insulation, antenna radomes, windows, and ceramic-filled waveguides. These dielectric materials should maintain electrical and structural integrity in a severe radiation and thermal environment. It is becoming more evident that the ceramic materials could be the weak point in the performance of the RF system, unless they are properly chosen.

31196 **Tritium technology review.** Finn, P.A.; Sze, D.K. (Chemical Technology Division, Fusion Power Program, Argonne National Laboratory, 9700 South Cass Avenue Argonne, IL). *Fusion Technology;* 8: No. 1, 693-706(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The methods used in recovering, containing and controlling tritium in fusion reactor systems are the subject of the paper. Safety, cost, and breeding needs for tritium control are outlined.

31197 **A comparison of burn cycle options for Tokamak reactors.** Ehst, D.A.; Brooks, J.N.; Cha, Y.; Evans, K.; Hassanein, A.M.; Kim, S.; Majumdar, S.; Misra, B.; Stevens, H.C. (Fusion Power Program, Argonne National Laboratory, 9700 South Cass Avenue, Argonne, IL). *Fusion Technology;* 8: No. 1, 727-730(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Consideration of burn cycle options for commercial tokamaks shows that there is substantial motivation to achieve steady state operation. This is partly due to longer replacement periods for first wall and impurity control components, but, in addition, large cost savings are found when magnets, power supplies, and the energy transfer system are not frequently pulsed. The hybrid burn cycle, with a combination of ohmic and noninductive current drive, does not significantly improve the economics of ohmically-driven commercial reactors with large major radius. However, an INTOR-class device has a critically small hole in the doughnut, and we find for this size tokamak that the hybrid cycle is preferred over ohmically-driven operation.

31198 **Neutral beam heating system for TFTR.** Williams, M.D.; Eubank, H.P.; Grisham, L.R.; Kamperschroer, J.H.; Kugel, H.W.; Martin, G.D.; O'Connor, T.; Prechter, R.E.; Prichard, B.A.; Von Halle, A. (Plasma Physics Laboratory, Princeton University, Princeton, NJ). *Fusion Technology;* 8: No. 1, 800-806(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The first two neutral injection beamlines have been installed on TFTR and are now operational. The operation of six ion sources producing either hydrogen or deuterium beams at energies up to 80 kilovolts has produced notable plasma heating results. Eventual neutral beam capability on TFTR should provide the energy necessary to demonstrate breakeven.

31199 **Theory of feedthroughs: wave transmission and voltage characteristics of high-power current feeds for ICRH.** Whealton, J.H.; Baity, F.W.; Becraft, W.R.; Bell, M.A.; Bledsoe, J.L.; Goswitz, A.M.; Hoffman, D.J.; Owens, T.L.; Raridon, R.J. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 400-404(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Using circuit theory and solutions of a scalar twodimensional Laplace equation for the electrostatic potential, we examine various feedthroughs of interest for voltage holding, voltage standing wave ratio (VSWR) and impedance characteristics. Suitable inhomogeneous Dirichlet, scalar boundary conditions are imposed for the potentials for the calculation of the electrostatic fields. The inhomogeneous vector Newman boundary conditions on the surface of the dielectric are dispatched by use of a conformal mapping. Several feedthroughs are examined: old Princeton Large Torus (PLT), JULICH designs, and several Oak Ridge National Laboratory (ORNL) designs that have been actually fabricated and exhaustively tested. Some of these feedthrough configurations have been optimized to provide constant 50-Ω impedance or minimum VSWR.

31200 **An alpha particle diagnostic beam line system to generate an intense Li^0 beam with an ORNL SITEX source.** Dagenhart, W.K.; Stirling, W.L.; Tsai, C.C.; Whealton, J.H. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 387-391(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Oak Ridge National Laboratory (ORNL) SITEX (Surface Ionization with Transverse Extraction) negative ion source utilizes a 100-V/20-A reflex arc discharge in a 1300-gauss magnetic field to generate Cs^+ ions and H^+ or D^+ ions, depending on the beam required. A shaped molybdenum plate is placed directly behind the arc column. Cesium coverage on this plate is used to minimize the surface work function, which requires two-thirds of a monolayer coverage. Cesium coverage is adjusted both by cesium flow control into the arc discharge chamber and by temperature control of the converter using gaseous-helium cooling channels in the converter plate. Normal converter operational temperatures are 300° to 500°C. H^-/D^- beams are generated at the biased converter surface (-150 V with respect to the anode) by Cs^+ sputtering of absorbed hydrogen or deuterium and by the reflection-conversion mechanism of H^+/D^+ ions which strike the converter surface at 150 eV. The negative ions are accelerated through the 150-V plasma sheath at the converter surface and are focused by the converter geometry and magnetic field so as to pass through the exit aperture

with minimum angular divergence. The ion optics of the SITEX accelerator has been calculated using the ORNL 3-D optics code and results in a divergence perpendicular to the slot of θ rms = 0.35° and parallel to the slot of θ rms = 0.18°. This beam divergence should be adequate for injection into a radio frequency quadrupole (RFQ) for further acceleration.

31201 **Tritium Systems Test Assembly Quality Assurance Program.** Kerstiens, F.L. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 891-894(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A Quality Assurance Program should establish the planned and systematic actions necessary to provide adequate confidence that fusion facilities and their subsystems will perform satisfactorily in service. The Tritium Systems Test Assembly (TSTA) Quality Assurance Program has been designed to assure that the designs, tests, data, and interpretive reports developed at TSTA are valid, accurate, and consistent with formally specified procedures and reviews. The quality consideration in all TSTA activities is directed toward the early detection of quality problems coupled with timely and positive disposition and corrective action.

31202 **Tritium Systems Test Assembly operator training program.** Kerstiens, F.L. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 895-897(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Proper operator training is needed to help ensure the safe operation of fusion facilities by personnel who are qualified to carry out their assigned responsibilities. Operators control and monitor the Tritium Systems Test Assembly (TSTA) during normal, emergency, and maintenance phases. Their performance is critical both to operational safety, assuring no release of tritium to the atmosphere, and to the successful simulation of the fusion reaction progress. Through proper training we are helping assure that TSTA facility operators perform their assignments in a safe and efficient manner and that the operators maintain high levels of operational proficiency through continuing training, retraining, requalification, and recertification.

31203 **Tritium system design for the mirror reactors FPD-I, FPD-II, and FPD-III.** Finn, P.A. (Chemical Technology Division, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 911-917(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The tritium system design for the Fusion Power Demonstration Reactor (FPD-I, II, and III) is described. The device operates at 25% availability. For FPD-II, an engineering mode using tritium neutral beams is part of the design.

31204 **Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples.** Bertone, P.C. (Princeton Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 918-926(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The LBM program requires that nanocurie quantities of tritium, bred in both lithium oxide pellets and lithium samples, be measured with an uncertainty not exceeding + or - 6%. Two methods of accurately measuring nanocurie quantities of tritium bred in LBM lithium oxide pellets and one method of accurately measuring nanocurie quantities of tritium bred in lithium samples are described. Potential errors associated with these tritium measurement techniques are also discussed.

31205 **Design of vacuum systems for MFTF-B neutral beamlines.** Vetrovec, J. (TRW Inc., Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1241-1246(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

MFTF-B is the largest fusion mirror device currently under construction. When completed in 1988 the mirror will be fueled and heated by 11 neutral beamlines whose combined power output will be over 40 MW. These beamlines are being designed and built by TRW Systems. Associated with each beamline is a vacuum system whose performance plays a crucial role in the operation of neutral beams. Good vacuum is needed in the injectors and dump tanks to limit the beam loss due to reionization and to avoid excessive gas flow into the plasma chamber. This paper will describe the design of these vacuum systems and explain the considerations and tradeoffs made in the process.

31206 **Active beam dump module design for MFTF-B.** Weeds, J.; Beck, H.; Chiu, J.; Goldner, A.; Vetrovec, J. (TRW, Inc., Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1247-1252(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

An actively-cooled dump module design is being developed for use in the MFTF-B long pulse neutral beamlines. The modular approach allows for application of the same design in several different areas, such as positive ion dumps, neutral dumps and beamline apertures. The dump modules are required to dissipate up to 1.2 MW of beam power with peak heat fluxes as high as 1500 W/cm^2 for a lifetime of 50,000 cycles. The modules are constructed from two rows of 1.91 cm O.D. x 0.318 cm wall (0.75 x 0.125 in.) oxygen-free copper tubbing, staggered to achieve maximum optical density. The tubes are bent into a "C" shape and connected to large diameter manifolds at each end. Thermal analysis of conduction in the tube wall has been performed to predict inner wall heat flux and tube wall temperature profiles. The results have been used both as an input to critical heat flux assessment as well as an input to NASTRAN stress analysis. The NASTRAN analysis has shown that tube deflections will be within allowable limits and that the design life will be ≃ 100,000 cycles.

31207 **Modified 180° separation magnet for DIII-Big Dee neutral beam injectors.** Hong, R.; Colleraine, A.P.; Fasolo, J.; Kim, J.; Phillips, J. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1648-1702(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Neutral beam injection systems for heating the plasma of a fusion research device utilize a deflection magnet to separate the unneutralized residual ions from the neutral particles and steer them into an ion dump. Performance of the separation magnet is crucial in that its failure will cause serious damage to beamline components. A technique using wire orbit simulations was successfully applied to test the performance of the modified 180° separation magnet for DIII-Big Dee neutral beam injectors. It simulated the stable ion trajectories, and showed the fringe field effects and the proper range of operating magnet field strength to be determined.

31208 **FPD plasma heating systems.** Freije, S.A. (TRW, Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1722-1728(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Tandem mirror devices rely on a number of plasma heating systems to create and maintain potential and density profiles which axially confine the central cell and provide MHD stability. The Fusion Power Demonstrator (FPD) tandem mirror study was carried out in three stages, each facility was configured with a slightly different mission and set of constraints. Although the heating system requirements varied in the three stages, the potential peak and thermal barrier ECRH systems and the sloshing ion neutral beam system were common elements of the configurations. The heating systems' requirements, the design approach, and the systems' description are presented.

31209 **TFTR bakeout system.** Goldfurb, S.; Ponton, W. (Princeton Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 1265-1268(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A system was designed and installed on the Tokamak Fusion Test Reactor (TFTR) to monitor temperatures and to control electrical heaters for 150°C bakeout. This system, an adjunct to the hot air vacuum vessel heating system, is used for heating vacuum vessel port covers, neutral beam ducts, and diagnostic vacuum enclosures contiguous with the main vacuum vessel. The control scheme is based on an Allen-Bradley 2-30 Programmable Controller (PC) which acquires thermocouple data, calculates temperature differentials and provides proportional control of the heater power supplies. Temperature differentials between the vessel walls heated by hot air and the electrically heated portions are limited by the system to avoid excessive thermal stress as the machine temperature is raised expeditiously to bakeout level. The system prints out operating parameters and operates independent of the main TFTR control computer which is interconnected only for data display and archiving.

31210 **An ICF Tritium production reactor.** Meier, W.R.; Berwald, D.H.; Gordon, J.D.; McCarville, T.J.; Steele, W.G. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1208-1213(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The conceptual design of an ICF tritium production reactor is described. The chamber design uses a beryllium multiplier and a liquid lithium breeder to achieve a tritium breeding ratio of 2.08. The annual net tritium production of this 532 MW /sub t/ plant is 16.9 kg, and the estimated cost of tritium is $8100/g.

31211 **Plasma heating systems module for TMRSC.** Freije, S.A.; Carson, R.S. (TRW, Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1774-1782(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

During the preconceptual design phases of a reactor study, many configuration alternatives must be evaluated in a short period of time. A Tandem Mirror Reactor Systems Code (TMRSC) has been developed as a tool in such evaluations. Since plasma heating systems can significantly impact the capital cost and the operational characteristics of a reactor, a heating systems module is an important element of the TMRSC. The module's primary purpose is to supply line power requirements, direct capital costs, and auxiliary system information from a set of physics requirements and general design specifications. The description of the module and some results are presented.

31212 **Qualitative comparisons of fusion reactor materials for waste handling and disposal.** Maninger, R.C. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1367-1375(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The activation of five structural materials and seven coolant/breeder/multiplier materials in a common reference neutron environment was calculated with the FORIG activation code. The reference environment was the neutron flux and spectrum at the first wall of the mirror advanced reactor study (MARS) reactor. Qualitative comparison of these activated materials were made with respect to worker protection requirements for gamma radiation in handling the materials and with respect to their classifications for near-surface disposal of radioactive waste.

31213 **How safe is safe enough? The relation of environmental characteristics and economic competitiveness in fusion-reactor design.** Holdren, J.P. (University of California, Berkeley; Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1625-1630(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The need for fusion energy depends strongly on fusion's potential to achieve ambitious safety goals more completely or more economically than fission can. The history and present complexion of public opinion about environment and safety gives little basis for expecting either that these concerns will prove to be a passing fad or that the public will make demands for zero risk that no energy source can meet. Hazard indices based on "worst case" accidents and exposures should be used as design tools to promote combinations of fusion-reactor materials and configurations that bring the worst cases down to levels small compared to the hazards people tolerate from electricity at the point of end use. It may well be possible, by building such safety into fusion from the ground up, to accomplish this goal at costs competitive with other inexhaustible electricity sources. Indeed, the still rising and ultimately indeterminate costs of meeting safety and environmental requirements in nonbreeder fission reactors and coal-burning power plants mean that fusion reactors meeting ambitious safety goals may be able to compete economically with these "interim" electricity sources as well.

31214 **Issues relating to the siting of tritium-fueled fusion experiments.** Reilly, H.J.; Holland, D.F. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1631-1636(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A preconceptual design study and safety analysis of the Tokamak Fusion Core Experiment (TFCX) was conducted in 1984 for the Department of Energy. This paper summarizes the calculations and comparisons related to TFCX siting and environmental issues such as radiological doses to the public living near the facility. Included are discussions of (a) routine and accidental releases of tritium, (b) routine releases of activated air, (c) direct radiation (including "skyshine"), and (d) seismic criteria. Other potential issues are also discussed including the amount of tritium that might be retained in the graphite armor in the torus, the possible severity of magnet accidents, and the extent of damage due to plasma disruptions. The conclusions drawn from these calculations should be applicable to some of the other planned ignited core experiments that have operating parameters similar to those of TFCX.

31215 **Fusion facility siting considerations.** Bussell, G.T. (Fusion Engineering Design Center/Stone & Webster Engineering Corporation, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1637-1642(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Inherent in the fusion program's transition from hydrogen devices to commercial power machines is a general increase in the size and scope of succeeding projects. This growth will lead to increased emphasis on safety, environmental impact, and the external effects of fusion in general, and of each new device in particular. A critically important consideration in this regard is site selection. The purpose of this paper is to examine major siting issues that may affect the economics, safety, and environmental impact of fusion.

31216 **High efficiency heat transport and power conversion system for cascade.** Maya, I.; Bourque, R.F.; Creedon, R.L.; Schultz, K.R. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1832-1837(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Cascade ICF reactor features a flowing blanket of solid BeO and $LiAlO_2$ granules with very high temperature capability (up to about 2300 K). We present here the design of a high temperature granule transport and heat exchange system, and two options for high efficiency power conversion. The centrifugal-throw transport system uses the peripheral speed imparted to the granules by the rotating chamber to effect granule transport and requires no additional equipment. The heat exchanger design is a vacuum heat transfer concept utilizing gravity-induced flow of the granules over ceramic heat exchange surfaces. A reference Brayton power cycle is presented which achieves 55% net efficiency with 1300 K peak helium temperature. A modified Field steam cycle (a hybrid Rankine/Brayton cycle) is presented as an alternate which achieves 56% net efficiency.

31217 **Progress in inertial fusion at LLNL.** Storm, E. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 189-200(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Experiments at LLNL using the 10 TW Novette laser have led to significantly increased understanding of laser/plasma coupling. Tests using 1.06 um, 0.53 um and 0.26 um light have shown increased light absorption, increased efficiency of conversion to x-rays, and decreased production of suprathermal electrons as the wavelength of the incident light decreases. The data indicate that stimulated Raman scattering is the source of the excessive hot electrons and that the effect can be controlled by the proper selection of laser frequency and target material. The control of these effects has led to achievement of higher inertial fusion target compressions and to production of the first laboratory x-ray laser.

31218 **Status of PBFA II for Inertial Confinement Fusion with light ions.** Van Devender, J.P. (Sandia National Laboratories, Pulsed Power Sciences 1200, Albuquerque, NM). *Fusion Technology;* 8: No. 1, 433-440(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The Particle Beam Fusion Accelerator II (PBFA II) is being constructed at Sandia National Laboratories (SNL) with initial operation scheduled for January 1986. PBFA II is the only facility currently under construction that has the possibility of achieving ignition or breakeven in the laboratory. It will deliver 1 to 2 MJ of lithium ions for experiments covering a wide range of Inertial Confinement Fusion (ICF) target designs. PBFA II will be used for studying weapons physics and implosion hydrodynamics in the near-term. In the early 1990s, we anticipate that PBFA II could be modified to produce a pulse-shaping option for exploring high-gain target physics. The achievement of high-gain may require a different accelerator. The potential advantages of pulsed power driven light ions for an energy application include very low cost, small size, small capital investment for an initial power plant, and greater than 20% efficiency for economical power production.

31219 **Collisonal pumping for the production of intense spin-polarized neutral BEAMS: target considerations.** Stearns, J.W.; Burrell, C.F.; Kaplan, S.N.; Pyle, R.V.; Ruby, L.; Schlachter, A.S. (Lawrence Berkeley Laboratory, University of California, Berkeley, CA). *Fusion Technology;* 8: No. 1, 645-650(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Neutral-beam heating and/or fueling offers the possibility of establishing deuteron and triton spins oriented parallel to the magnetic field (or antiparallel to the field). It is believed that the polarizations can be maintained by guide fields until the particles are within the reactor. A beam suitable for this magnetic fusion-energy application would require five to six orders of magnitude increase in polarized beam intensity from the limits imposed by present technology, which is on the order of 10-100 μA. We have recently proposed that ampere-sized beams of nuclear-spin-polarized ions and atoms can be produced by multiple atomic collisions in an electron-spin-polarized medium. By analogy to optical pumping, we have called the process "collisional pumping." Such pumping will occur when an ion beam passes through a thick electron-spinpolarized target in a low magnetic field. As an ion in the beam undergoes a succession of electron-capture and -loss collisions, polarization is transferred from the electron to the nucleus through the hyperfine interaction. After a sufficient number of charge-changing collisions, both the electron and nuclear polarization of the beam will be pumped to the electron polarization of the target. We have analyzed and theoretically demonstrated several examples of collisional pumping; the case that lends itself to earliest testing is that of a low-energy (0.1 - 10 keV/u) hydrogen or deuterium beam passing through a thick electron-spin-polarized alkalivapor target in a low magnetic field.

31220 **Bremsstrahlung shielding analysis of the particle beam fusion accelerator PBFA II.** Sweeney, M.A.; Olsen, J.N. (Sandia National Laboratories, Pulsed Power Theory Division 1265, Albuquerque, NM). *Fusion Technology;* 8: No. 1, 1032-1036(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Shielding of specific electronic components from the harsh bremsstrahlung environment expected on PBFA II has been investigated. 3-D Monte Carlo estimates of dose in locations throughout the facility have been compared with electronic technology thresholds to identify possible problem locations or technologies. In some parts of the facility, implementation of the 30-MV lithium ion diode option will increase dose rates to electronic equipment above tolerable levels. As a result, additional close-in shielding is being employed and some components are being moved to lower radiation level locations. None of the changes are prohibitive in terms of time, cost, or accelerator utility.

31221 **Polonium aspects associated with the use of lead-lithium blankets in fusion applications.** Hoffman, N.J.; Blink, J.A.; Meier, W.R.; Murray, K.A.; Vogelsang, W.F. (ETEC, Canoga Park, CA). *Fusion Technology;* 8: No. 1, 1376-1384(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Polonium, an alpha-emitting sulfur-like element, is formed by neutron irradiation of lead or bismuth impurity in lead. Design studies of both the Pulse*Star inertial confinement fusion (ICF) reactor and the MARS mirror fusion reactor postulated use of 83Pb-17Li melt as the tritium breeding blanket and coolant. Comparison of the amounts of polonium in the melt at plant shutdown indicated that Pulse*Star would have a far higher level of polonium in the melt. Neutronic considerations and the polonium distribution between the vacuum cleanup system and 83Pb-17Li melt for the two reactors are explored in this paper. Sample neutronics runs showed that the codes used by each design team were not the source of the difference in polonium content.

31222 **A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor.** Murray, K.A.; Corugedo, J.J.; Hoffman, N.J. (Energy Technology Engineering Center, Canoga Park, CA). *Fusion Technology;* 8: No. 1, 1901-1908(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Two different primary coolants, Li and 83Pb-17Li, have been examined for use in Pulse Star, a pooltype inertial confinement fusion reactor, and a balance-of-plant design has been generated for each coolant. The use of 83Pb-17Li eliminates concern about the large amount of stored chemical energy found in pure Li fusion reactors. A secondary loop was not included in the 83Pb-17Li coolant design because of the relative nonreactivity of lead-lithium. The design utilizing Li as a primary coolant includes a sodium secondary loop to prevent direct contact between irradiated Li and high-pressure water in the case of a steam generator leak. The secondary loop requires additional piping, pumps, heat exchanger area, and steam generator buildings. These additional costs are mitigated by the low pumping power requirement of Li compared with that of high-density 83Pb-17Li. A cost analysis revealed that the additional costs of the Li coolant design are only slightly greater ($13.5 million) than the cost savings due to the lower pumping power. Preliminary studies indicate that tritium containment will be more costly for the 83Pb-17Li coolant design than for the one involving pure Li because the insolubility of tritium in 83Pb-17Li creates large driving forces for tritium leakage into the surrounding plant. The tradeoff between the two safety concerns of chemical stability in the case of 83Pb-17Li and practicable tritium containment in the case of pure Li needs to be investigated.

31223 **The Pulse Star inertial confinement fusion reactor.** Blink, J.A.; Hogan, W.J. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 1204-1207(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Pulse Star is a pool-type ICF reactor that emphasizes low cost and high safety levels. The reactor consists of a vacuum chamber (belljar) submerged in a compact liquid metal ($Li_{17}Pb_{83}$ or lithium) pool which also contains the heat exchangers and liquid metal pumps. The shielding efficiency of the liquid metal pool is high enough to allow hands-on maintenance of (removed) pumps and heat exchangers. Liquid metal is allowed to spray through the 5.5 m radius belljar at a controlled rate, but is prohibited from the target region by a 4 m radius mesh first wall. The wetted first wall absorbs the fusion x-rays and debris while the spray region absorbs the fusion neutrons. The mesh allows vaporized liquid metal to blow through to the spray region where it can quickly cool and condense. Preliminary calculations show that a 2 m thick first wall could handle the mechanical (support, buckling, and x-ray induced hoop) loads. Wetting and gas flow issues are in an initial investigation stage.

31224 **Compact inertial confinement fusion multireactor concepts.** Pendergrass, J.H. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1214-1219(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Inertial confinement fusion (ICF) commercial-applications plant-optimum driver pulse repetition rates may exceed reactor pulse-repetition-rate capabilities. Thus, more than one reactor may be required for low-cost production of electric power, process heat, fissionable fuels, etc., in ICF plants. Substantial savings in expensive reactor containment cells and blankets can be realized by placing more than one reactor in a cell and by surrounding more than one cavity with a single blanket system. There are also some potential disadvantages associated with close coupling in compact multicavity blankets and multireactor cells. Tradeoffs associated with several scenarios have been studied.

31225 **A high efficiency I.C.F. driver employing magnetically confined plasma rings.** Meeker, D.J.; Hammer, J.M.; Hartman, C.W. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1191-1197(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

We discuss the possibility of achieving energy, power and power density necessary for ICF by magnetically accelerating plasma confined by a compact torus (CT) field configuration. The CT, which consists of a dipole (poloidal) field and imbedded toroidal field formed by force-free, plasma current, is compressed and accelerated between coaxial electrodes by $B\theta$ fields as in a coaxial railgun. Compression and accleration over several meters by a 9.4 MJ capacitor bank is predicted to give a 5.7 cm radius, 0.001 gm CT 5 MJ kinetic energy (10^7 m/sec). Transport and focusing several meters by a disposable lithium pipe across the containment vessel is predicted to bring 4.8 MJ into the pellet region in 0.5 cm^2 area in 0.3 ns. The high efficiency (about 50%) and high energy delivery of the CT accelerator could lead to low cost, few hundred MW power plants that are economically viable.

31226 **Development of the cascade inertial-confinement-fusion reactor.** Pitts, J.H. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1198-1203(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Caqscade, originally conceived as a football-shaped, steel-walled reactor containing a Li_2O granule blanket, is now envisaged as a double-cone-shaped reactor containing a two-layered (three-zone) flowing blanket of BeO and $LiAlO_2$ granules. Average blanket exit temperature is 1670 K and gross plant efficiency (net thermal conversion efficiency) using a Brayton cycle is 55%. The reactor has a low-activation SiC-tiled wall. It rotates at 50 rpm, and the granules are transported to the top of the heat exchanger using their peripheral speed; no conveyors or lifts are required. The granules return to the reactor by gravity. After considerable analysis and experimentation, we continue to regard Cascade as a promising reactor concept with the advantages of safety, efficiency, and low activation.

31227 **KrF laser cost/performance model for ICF commercial applications.** Harris, D.B.; Pendergrass, J.H. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1220-1228(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Simple expressions for the cost and efficiency of repetitively-pulsed angularly multiplexed KrF laser fusion drivers have been developed for commercial-applications studies. These simple expressions summarize estimates obtained from detailed cost/performance studies incorporating recent results of ongoing physics, design, and cost studies. Contributions of KrF laser capital charges and O & M costs to total levelized constant-dollar (1984) unit ICF power generation cost are estimated as a function of plant size and driver pulse energy using a published gain for short-wavelength lasers and representative values of plant parameters.

31228 **Inertial fusion reactors and magnetic fields.** Cronwell, J.B.; Pendergrass, J.H. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1861-1867(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The application of magnetic fields of simple configurations and modest strengths to direct target debris ions out of cavities can alleviate recognized shortcomings of several classes of inertial confinement fusion (ICF) reactors. Complex fringes of the strong magnetic fields of heavy-ion fusion (HIF) focusing magnets may intrude into reactor cavities and significantly affect the trajectories of target debris ions. The results of an assessment of potential benefits from the use of magnetic fields in ICF reactors and of potential problems with focusing-magnet fields in HIF reactors conducted to set priorities for continuing studies are reported. Computational tools are described and some preliminary results are presented.

31229 **Megajoule-class single-pulse KrF laser test facility as a logical step toward inertial fusion commercialization.** Harris, D.B.; Pendergrass, J.M. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1868-1871(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The cost and efficiency of megajoule-class KrF laser single pulse test facilities have been examined. A baseline design is described which illuminates targets with 5 MJ with shaped 10-ns pulses. The system uses 24 main amplifiers and operates with an optics operating fluence of 4.0 J/cm^2. This system has 9.0% efficiency and costs $200/joule. Tradeoff studies indicate that large amplifier modules and high fluences lead to the lowest laser system costs, but that only a 20% cost savings can be realized by going to amplifier modules larger than 200 kJ and/or fluences greater than 4 J/cm^2. The role of the megajoule-class single-pulse test facility towards inertial fusion commercialization will also be discussed.

31230 **Design optimization of single-main-amplifier KrF laser-fusion systems.** Harris, D.B.; Pendergrass, J.H. (University of California, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 1, 1872-1877(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

KrF lasers appear to be a very promising laser fusion driver for commercial applications. The Large Amplifier Module for the Aurora Laser System at Los Alamos is the largest KrF laser in the world and is currently operating at 5 kJ with 10-15 kJ eventually expected. The next generation system is anticipated to be a single-main-amplifier system that generates approximately 100 kJ. This paper examines the cost and efficiency tradeoffs for a complete single-main-amplifier KrF laser fusion experimental facility. It has been found that a 7% efficient $310/joule complete laser-fusion

system is possible by using large amplifier modules and high optical fluences.

31231 ICF reactor economics: identifying the high leverage design features. Meier, W.R.; Hogan, W.J. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1820-1825(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Parametric studies were carried out for a heavy ion beam (HIB) fusion electric power plant to investigate the effects on the cost of electricity (COE) of variations in several design parameters. In particular, we examined the effects of maximum achievable chamber pulse rate, driver cost, target gain, electric conversion efficiency, and net electric power. We find that with a combination of improvements over our base case, HIB fusion can be economically competitive with other future power sources.

31232 Hot cell facility design for large fusion devices. Barrett, R.J.; Bussell, G.T. (Fusion Engineering Design Center/Burns & Roe, Inc., Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 318-326(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Large hot cell facilities will be necessary to support the operation of large fusion devices. The supporting hot cells will be needed to serve a variety of different functions and tasks, which include reactor component maintenance, tool and maintenance equipment repair, and preparation of radioactive material for shipment and disposal. This paper discusses hot cell facility functions, requirements, and design issues and techniques. Suggested solutions and examples are given.

31233 Erosion tests of materials by energetic particle beams. Schechter, D.E.; Becraft, W.R.; Hoffman, D.J.; Sluss, F.; Tsai, C.C. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 559-564(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The internal components of magnetic fusion devices must withstand erosion from and high heat flux of energetic plasma particles. The selection of materials for the construction of these components is important to minimize contamination of the plasma. In order to study various materials' comparative resistance to erosion by energetic particles and their ability to withstand high heat flux, water-cooled copper swirl tubes coated or armored with various materials were subjected to bombardment by hydrogen and helium particle beams. Materials tested were graphite, titanium carbide (TiC), chromium, nickel, copper, silver, gold, and aluminum. Details of the experimental arrangement and methods of application or attachment of the materials to the copper swirl tubes are presented. Results including survivability and mass losses are discussed.

31234 Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid. Edwards, G.R.; Eberhard, B.A.; Matlock, D.K. (Department of Metallurgical Engineering, Colorado School of Mines, Golden, CO). *Fusion Technology;* 8: No. 1, 937-946(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The embrittlement of 2 1/4Cr-1Mo steel by lithium or lead-lithium liquids can occur when loading conditions and microstructural strengthening effects limit plastic relaxation at points of high stress, and a critical liquid metal induced embrittlement (LMIE) stress is reached. This paper presents the LMIE results of both constant displacement rate uniaxial tensile testing and fatigue crack propagation studies. The temperature for the onset of LMIE susceptibility at a given localized strain rate is shown to be predictable based on a critical value of flow stress, calculated by means of the ZenerHolloman parameter.

31235 Neutral pumping rates for a next step tokamak ignition device. Galambos, J.D.; Heifetz, D.; Peng, Y.-K.M. (FEDC/Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 1, 1253-1258(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Neutral pumping rates are calculated for pumplimiter and divertor options of a next step tokamak ignition device using a method that accounts for the coupled effects of neutral transport and plasma transport. For both pump limiters and divertors the plasma flow into the channel surrounding the neutralizer plate is greatly reduced by the neutral recycling. The fraction of this flow that is pumped can be large (>50%) but in general is dependent on the particular geometry and plasma conditions. It is estimated that pumping speeds $\geq 10^6$ L/s are adequate for the exhaust requirements in the pump-limiter and the divertor cases.

31236 Self-sustaining coatings for fusion applications-copper lithium alloys. Krauss, A.R.; Brooks, J.N.; DeWald, A.B.; Gruen, D.M.; Mattas, R.F.; Mendelsohn, M.H. (Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1269-1274(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Dilute binary alloys have been discussed previously as a means of producing self-sustaining coatings for fusion applications. The anticipated advantages of such coatings are described in a companion paper.[11] Issues addressed in this paper concern experimental observation of the formation of a low-Z coating by solute segregation in a Cu-Li alloy, maintenance of the coating in a sputtering environment, and a comparison of the calculated net erosion for W, Mo, and Cu-Li when used as either the divertor plate or the bottom limiter for INTOR.

31237 A new concept for pumping the edge plasma. Barr, W.L. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 1, 1772-1773(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A new concept is proposed for pumped limiter designs that allows more flexibility and therefore better control of the edge plasma and its recycling at the limiter than previous designs.

31238 Thermomechanical testing of beryllium for limiters in ISX-B and jet. Smith, M.F.; McDonald, J.M.; Watson, R.D.; Whitley, J.B. (Sandia National Laboratories, Albuquerque, NM). *Fusion Technology;* 8: No. 1, 1174-1183(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Materials testing of S-65-B grade beryllium has been conducted in order to evaluate the use of this material for limiter surfaces in the ISX-B and JET tokamaks. Selected thermal and mechanical properties were measured at temperatures up to 700 °C. These measurements revealed that S-65-B has exceptionally high ductility (up to roughly 50% elongation) at temperatures expected in normal operation of a beryllium limiter. Thermal fatigue tests under conditions relevant to limiters in ISX-B and JET were also performed using the Sandia National Laboratories Electron Beam Test System (EBTS). Results from these tests were compared to calculated results based on elastic-plastic finite element stress analyses. It was concluded from these tests and analyses that properly designed beryllium limiters should survive normal operation in ISX-B, JET, and similar devices without serious structural failure. Some degree of surface cracking can be expected, however, unless cyclic plastic deformation at the heated surfaces can be adequately controlled by careful design of the limiter.

31239 Safety considerations of lithium lead alloy as a fusion reactor breeding material. Jeppson, D.W.; Muhlestein, L.D. (Westinghouse Hanford Company, Hanford Engineering Development Laboratory, Richland, WA). *Fusion Technology;* 8: No. 1, 1385-1391(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Test results and conclusions are presented for lithium lead alloy interactions with various gas atmospheres, concrete and potential reactor coolants. The reactions are characterized to evaluate the potential of volatilizing and transporting radioactive species associated with the liquid breeder under postulated fusion reactor accident conditions. The safety concerns identified for lithium lead alloy reactions with the above materials are compared to those previously identified for a reference fusion breeder material, liquid lithium. Conclusions made from this comparison are also included.

31240 **Elemental volatility of HT-9 fusion reactor alloy.** Hensiee, S.P.; Neilson, R.M. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1392-1395(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The volatility of elemental constituents from HT-9, a ferritic steel, proposed for fusion reactor structures, was investigated. Tests were conducted in flowing air at temperatures from 800 to 1200°C for durations of 1 to 20 h. Elemental volatility was calculated in terms of the weight fraction of the element volatilized from the initial alloy; molybdenum, manganese, and nickel were the primary constituents volatilized. Comparisons with elemental volatilities observed for another candidate fusion reactor material, Primary Candidate Alloy (PCA), an austenitic stainless steel, indicate significant differences between the volatilities of these steels that may impact fusion reactor safety analysis and alloy selection. Scanning electron microscopy and energy dispersive spectrometry were used to investigate the oxide layers formed on HT-9 and to measure elemental contents within these layers.

31241 **Low activation burning core reactor design studies.** Cheng, E.T.; Creedon, R.L.; Hopkins, G.R.; Trester, P.; Wong, C.P.C. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 1, 1408-1414(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A preliminary conceptual design study for a very low activation fusion plasma core experimental facility is presented. Low activation is achieved by using only very low activation materials in the inner shield (graphite blocks), vacuum vessel (Al/SiC composite alloy), outer shield (SiC/B_4C) and magnets (Aluminum). The mechanical configuration of the vacuum vessel is a water-flooded double-shell. It is capable of carrying 1.5 MN in hoop compression with a reserve factor of two over the equatorial 0.8 m zone during plasma disruption. Hands-on access to the vacuum vessel and auxiliary equipment provide a high degree of operability, maintainability and flexibility in experimental program. Problem areas are in further development of the aluminum alloy and composite materials for the vacuum vessel and in cost reduction of high purity low activation materials.

31242 **The effectiveness of building wall boration in controlling the neutron responses in a fusion facility.** Ku, L.P.; Kolibal, J.; Liew, S.L. (Princeton University, Plasma Physics Laboratory, Princeton, NJ). *Fusion Technology;* 8: No. 1, 1449-1453(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The relative effectiveness of reducing neutron induced responses in a building by borating the concrete wall was examined. Discussions are presented for the three major variables affecting the boration effectiveness - boron concentration, boration thickness and the area of coverage. Only the generalized neutron sources and room scattering conditions have been used. The data and formula derived from this analysis are useful in the study of design variations.

31243 **Operating and geometrical arrangement requirements for fusion neutronics testing.** Oyama, Y.; Abdou, M.A.; Youssef, M.Z. (University of California at Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 1484-1490(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Neutronics tests in a fusion engineering test device will be required to verify the neutronics prediction capabilities (calculational methods and data base). This paper presents the requirements related to the neutronics test. These requirements include those associated with the operational environment (e.g., wall load, fluence, plasma burn time, etc.) and the ones related to the test module configuration (geometrical arrangements, minimum size for meaningful test information, boundary conditions, etc.). Both experimental consideration and neutronic analyses were carried out to quantify these conditions.

31244 **Neutronics activities for next generation devices.** Gonar, Y. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1542-1551(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Neutronics activities for the next generation devices are the subject of this paper. The main activities include TFCX and FPD blanket/shield studies, neutronics aspects of ETR/INTOR critical issues, and neutronics computational modules for the tokamak system code and tandem mirror reactor system code. Trade-off analyses, optimization studies, design problem investigations and computational models development for reactor parametric studies carried out for these activities are summarized.

31245 **Identification and characterization of the key issues of fusion nuclear technology.** Tilack, M.; Abdou, M.; Berwald, D.; Davis, J.; Deis, G.; Gierszewski, P.; Hollenberg, G.; Kleefeldt, K.; Liu, Y.; Morgan, D.; Piet, S. (University of California Los Angeles, Los Angeles, CA). *Fusion Technology;* 8: No. 1, 1091-1100(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Fusion nuclear technology testing issues are reviewed, covering the technical disciplines of materials science, structural mechanics, MHD, thermal hydraulics, tritium recovery, and others. These issues represent the largest uncertainties whose resolution will require new knowledge through experiments, models, and theory in order to demonstrate the feasibility and attractiveness of the entire fusion nuclear system. Needed tests range in complexity, including basic materials property data, exploration of individual and interactive phenomena, and fully integrated tests. By addressing the complete array of testing issues, this work helps to define needed engineering research which should prove useful in future fusion program planning.

31246 **Interactive effects and fluence goals.** Straalsund, J.L.; Grover, J.M.; Hollenburg, G.W.; Opperman, E.K.; Pugih, R.J. (Westinghouse Hanford Co., Richland, WA). *Fusion Technology;* 8: No. 1, 1109-1114(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Directly related to the key technological issues identified within FINESSE are basic material interactions. These material interactions arise from material property changes and lead to interactive effects which have been identified for several first wall/blanket concepts. Emphasis has been placed upon those interactive effects which are directly related to accumulated neutron damage. For testing purposes the minimum accumulated neutron fluence needed to substantially reduce the uncertainty associated with an anticipated material interaction must be defined. A method of projecting uncertainties associated with interactive effects has been developed to determine these fluence goals for selected issues.

31247 **Utilization of fission reactors for fusion engineering testing.** Deis, G.A.; Miller, L.G.; Yuussef, M. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1115-1123(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Fission reactors can be used to conduct some of the fusion nuclear engineering tests identified in the FINESSE study. To further define the advantages and disadvantages of fission testing, the technical and programmatic constraints on this type of testing are discussed here. This paper presents and discusses eight key issues affecting fission utilization. Quantitative comparisons with projected fusion operation are made to determine the technical assets and limitations of fission testing. Capabilities of existing fission reactors are summarized and compared with technical needs. Conclusions are then presented on the areas where fission testing can be most useful.

31248 **Radiation damage experiments and lifetime estimates for beryllium components in fusion systems.** Miller, L.G.; Beeston, J.M. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 1, 1152-1156(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The critical need for beryllium as a neutron multiplier in fusion blankets provides a driving force to determine beryllium's mechanical performance at high neutron fluences and temperatures. Extrapolation of mechanical performance and lifetimes for beryllium multipliers have been made based on limited high temperature data obtained from EBR-II irradiated beryllium.

31249 **An assessment of radiation effects in beryllium.** Wolfer, W.G.; McCarville, T.J. (Department of Nuclear Engineering, University of Wisconsin, Madison, WI). *Fusion Technology;* 8: No. 1, 1157-1164(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Radiation effects in beryllium as produced by fast neutrons and resulting in dimensional changes are reviewed. It is found that helium bubble swelling is the predominant mechanism; however, because of the intrinsic anisotropy of the dislocation structure, bubble swelling is expected to be anisotropic, accompanied by radiation-induced growth. The anisotropy of swelling and plastic deformation at the microscopic level of crystal grains eventually results in microcracking, and the total inelastic deformation should therefore not exceed about 1%.

31250 **Calculating the pumping speed of cryopanels: option to Monte Carlo methods.** Vetrovec, J. (TRW Inc., Redondo Beach, CA). *Fusion Technology;* 8: No. 1, 1235-1240(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

The key parameter in calculating the pumping speed of cryopanels is the capture probability. This probability is usually determined by Monte Carlo methods simulating molecular transport of gas. While such methods can be very accurate, they are also rather costly and inflexible. An alternate approach is proposed which uses an analytical method that draws on analogy between radiative heat transfer and molecular gas flow. This analytical method will be described, and it will be shown how it was used to obtain first estimates of pumping speed for the cryopanels for the MFTF-B Neutral Beamlines. The directional dependence of pumping speed is discussed in detail. The results of the calculations are compared to both the Monte Carlo results and experimental data.

31251 **Engineering design of the ALT-II pump limiter for TEXTOR.** Brown, G.W.; Koski, J.A.; Watson, R.D. (Sandia National Laboratories, Albuquerque, NM). *Fusion Technology;* 8: No. 1, 1729-1734(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Advanced Limiter Test II (ALT-II) is an axisymmetric toroidal belt pump limiter scheduled for installation on the TEXTOR tokamak in 1986. ALT-II consists of eight blade segments mounted on adjustable supports located 45° down from the outboard midplane of the torus. The passively cooled pump limiter is designed to remove 5-10% of the plasma efflux and can withstand heat loads on its leading edges up to 300 W/cm^2 for 3 second pulse durations. Engineering analyses for ALT-II include calculations of Lorentz forces that could arise during disruptions and predictions of thermal stresses in the blades. The blades are designed to withstand these conditions without compromising pumping efficiency. Support and drive mechanisms are being designed to operate reliably in TEXTOR with minimum introduction of impurities.

31252 **Surface effects on sputtered atoms and their angular and energy dependence.** Hasanein, A.M. (Fusion Power Program, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* 8: No. 1, 1735-1741(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A comprehensive three-dimensional Monte Carlo computer code, Ion Transport in Materials and Compounds (ITMC), has been developed to study in detail the surface related phenomena that affect the amount of sputtered atoms and back-scattered ions and their angular and energy dependence. A number of important factors that can significantly affect the sputtering behavior of a surface can be studied in detail, such as having different surface properties and composition than the bulk and synergistic effects due to surface segregation of alloys. These factors can be important in determining the lifetime of fusion reactor first walls and limiters. The ITMC Code is based on Monte Carlo methods to track down the path and the damage produced by charged particles as they slow down in solid metal surfaces or compounds. The major advantages of the ITMC code are its flexibility and ability to use and compare all existing models for energy losses, all known interatomic potentials, and to use different materials and compounds with different surface and bulk composition to allow for dynamic surface composition changes. There is good agreement between the code and available experimental results without using adjusting parameters for the energy losses mechanisms. The ITMC Code is highly optimized, very fast to run and easy to use.

31253 **Effects of pulsed operation on the lifetime of turbine rotors.** Nakagawa, Y.; Meyer, J.E. (Nuclear Engineering Department and Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, MA). *Fusion Technology;* 8: No. 1, 1783-1788(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

A pulsed fusion reactor potentially influences many commercial plant design provisions. Provisions related to turbine fatigue performance are among those considered important. They are evaluated by varying several design/operating parameters, separately and in combination, to present tradeoffs among them. These parameters include pulse length and capacity of the thermal storage system. A very simple and fast running temperature/stress representation of the turbine is used for evaluations. Results for wet-steam turbines indicate that requirements for thermal storage are quite large (steam flow between 40 and 80% of full steam flow). Modeling assumptions, design options, and important operating considerations are highlighted.

31254 **Cryopumping hydrogen isotope mixtures in MFTF-B with and without argon adsorbent.** Schumacher, B.J.; Call, W.R. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *Fusion Technology;* 8: No. 1, 1284-1290(Jul 1985). (CONF-850310—).

From 6. topical meeting on the technology of fusion energy; San Francisco, CA, USA (3 Mar 1985).

Mixtures of hydrogen isotopes, primarily deuterium (D_2), protium-deuterium (HD), and protium (H_2) must be pumped by the vacuum system in the Mirror Fusion Test Facility at Lawrence Livermore National Laboratory. In this study, we used argon as an adsorbent for cryopumping these isotopes at 4.2 K and found that deuterium will displace already adsorbed protium. Thus, when we pump mixtures of the two, sufficient argon must be supplied to adsorb both species. We also found that without argon, deuterium will cryotrap protium in accord with Raoult's law.

31255 **Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiAlO_2$ solid breeders with and without irradiation effects.** Liv, Y.Y.; Tam, S.W. (Argonne National Laboratory, Materials Science and Technology Division, Argonne, IL). *Fusion Technology;* 7: No. 3, 399-410(May 1985).

Thermal conductivities (k,K /sub eff/) have been estimated for sintered and sphere-pac Li_2O and γ-$LiAtO_2$ with and without neutron irradiation effects. The estimation is based on (a) data from unirradiated UO_2, Li_2O, and γ-$LiAlO_2$; (b) data from irradiated dielectric insulator materials; and (c) relatively simple physical models. Comparison of model predictions with limited ex- and in-reactor data found reasonable agreement, thus lending credence for their use in design applications. The impact of thermal conductivities on tritium breeding and power generation in fusion solid breeder blankets is briefly highlighted.

31256 **Analysis of doublet proton spectra from laser implosion experiments.** Welch, D.R.; Harris, D.B.; Miley, G.M. (University of Illinois, Fusion Studies Laboratory, Nuclear Engineering Program, Urbana, IL). *Fusion Technology;* 7: No. 3, 334-344(May 1985).

Double-peaked energy spectra of deuteriumdeuterium protons have been observed from laser implosion experiments at the University of Rochester. These spectra have been used to study implosion dynamics. The energy and broadening of the two peaks relate to distinct burn phases, shock coalescence, and compression. Data are obtained by unfolding the spectra. Using a model for changing target /rho/R conditions, the proton energy loss and the broadening of each peak determine the fuel compression and temperature for each burn phase. An ion temperature for the shock phase is determined from thermal broadening. The compression peak's energy broadening and separation from the shock peak is fit to an adiabatic temperature model. Preliminary data suggest that temperatures during both burns are 20% below that predicted by an extensive simulation code. Compressions are also lower than predicted.

31257 **Cold fusion and graser prospects.** McNally, J.R. *Fusion Technology;* 7: No. 3, 331-333(May 1985).

The possibility of resonance reactions at low temperatures and in dense media is a relatively unexplored territory in fact, it may be a vast wasteland. At higher temperatures and/or much higher densities, the possibility of pycnonuclear reactions is quite well established.[5] Liquid deuterium or deuterium-tritium can ignite at room temperature for densities of about 10^8 or 10^4 g/cm^3, respectively. It should be recognized that if such low-temperature reactions can occur without an accompanying negative temperature coefficient, there is a serious possibility of a runaway reaction giving potentially undesirable and unexpected effects involving large-scale energy excursions. Should beryllium be capable of undergoing any such resonance reactions, it could explain some of the toxicology of beryllium poisoning. Free neutrons from cold fusion may offer the potential of breeding energy rich fusile (tritium or ^{3}He) or fissile (^{233}U or ^{239}Pu) fuels.

31258 **Economic potential of inertial fusion.** Nuckolls, J.H. (Lawrence Livermore National Lab., CA). *Journal of Fusion Energy;* 4: No. 2/3, 181-186(1985). Contract W-7405-ENG-48.

Economic studies suggest that inertial fusion energy's ultimate costs may be only half to two-thirds those of advanced minimum cost fission and coal energy systems. This lower cost derives from two potential advantages of fusion energy: negligible fuel costs and high electrical generating efficiency. The combination of high-quality energy and fluid-shielded walls makes more efficient generation of electricity possible. The first step in demonstrating economic feasibility is to demonstrate scientific feasibility, achieve engineering feasibility, and build a commercially attractive demonstration reactor with available funds, then to build relative small and inexpensive early commercial fusion power plants to reduce utility risks and achieve high learning rates. An economic analysis using sensitivity studies supports long-term economic advantages for fusion. 1 figure, 4 tables.

31259 **Summary abstract: control of gas input and background pressure in the end plug regions of the TMX-U thermal barrier experiment.** Turner, W.C.; Nexsen, W.E.; Allen, S.L.; Hooper, E.B.; Hunt, A.L.; Lang, D.D.; Margolies, D.S.; Pickles, W.L.; Simonen, T.C. (Lawrence Livermore National Lab., CA). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 2: No. 2, 653-654(Apr-Jun 1984). Contract W-7405-ENG-48.

Rate equations for the plasma species in a thermal barrier end plug establish an upper bound on the neutral pressure (P) external to the plasma. For the Tandem Mirror Experiment-Upgrade (TMX-U), this bound is $P \leqq 0.5 - 1.0 \times 10^{-6}$ Torr. Initially TMX-U did not satisfy this criterion, and axial end plugging of plasma losses seemed limited by the excess pressure. Subsequently, the machine was modified to improve the vacuum conditions, decreasing P to the desired range. At the same time axial end plugging of plasma losses increased to the duration of neutral beam injection and ECRH heating. Experimental measurements of gas input are discussed. Detailed accounts of the specific modifications, the dynamic pressure measurements, a rate equation for end plug pressure, and the increase in axial end plugging are given.

31260 **Eddy current modelling and poloidal field penetration in TFTR.** Brown, D.I.; Bell, M.G.; Coonrod, J. (Princeton University, Princeton, NJ). pp 56 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

Prior to the first operation of TFTR in December 1982, a circuit model was developed to study the time-dependent magnetic fields generated by eddy currents induced in the structure. The sources of excitation of the structure were the poloidal coil systems, namely the ohmic heating (OH), equilibrium field (EF) and variable curvature (VC) windings, and the plasma current itself. To make the problem of treating the whole structure tractable, the eddy current flow patterns were reduced to a set of about 200 defined paths for which all mutual couplings were calculated. The vacuum vessel was modelled by a set of 36 parallel, axisymmetric strips. Saddle currents induced by the presence of the 8 poloidally symmetric bellows sections were not simulated in the model. The results of this strip model were compared with those from a periodic discrete-mesh simulation of the vessel alone which allowed for the presence of saddle currents. For a sinusoidal excitation of the OH system, there was good agreement in the complex field response inside the vessel between the two models. For the toroidal field (TF) coil structure, small scale, periodic current paths have a dominant effect. These were modelled by choosing a set of effective, toroidally symmetric paths with resistances reflecting the actual current patterns. Once again, comparison of the simple model with a discrete-mesh simulation of the TF structure alone showed satisfactory agreement in the frequency range of interest.

31261 **Magnet alignment in MFTF-B.** Thomassen, K.I.; Baldwin, D.E.; Yamaguchi, G.T. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). pp 23 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

In the MFTF-B axicell tandem mirror the magnetic design of the transition region is critical to achieving high performance in the machine. The normal and geodesic field curvatures determine the MHD β-limits in the machine, govern the equilibrium in the center cell by controlling parallel currents that might extend into the center cell, and limit the radial transport time for the device. The last of these determines the plasma "Q". Key to this design is the "double fan" transition as invented by Baldwin and Bulmer. In this double fan, there is no net geodesic curvature as defined by an integral over positive and negative contributions from each individual fan. Despite this cancellation, passing particles still see a net geodesic curvature if they drift azimuthally in transit between these individual peaks. A net difference of a few percent of the contribu-

tion from one peak gives use to the calculated 1 sec radial containment time in MFTF-B.

31262 **Invited paper: measurements and model of the coupled particle loss and fluid acceleration in the boundary layer of the zt-40m reversed-field pinch.** Jacobson, A.; Burkhardt, C.; Rusbridge, G. (Los Alamos National Laboratory, Los Alamos, NM). pp 38 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

Coordinated measurements of density fluctuations, using a 10-chord forward scattering array, and of poloidal voltage fluctuations (for frequencies lower than the liner's skin frequency) have led to a consistent account of fluid acceleration associated with pulsed particle loss. The fluctuations involved in this mechanism are present from the beginning of the discharge, and are not obviously related to termination percursor phenomena observed in ZT-40M and discussed elsewhere. The dominant density fluctuation in ZT-40M is an impulsive (risetime about 5 μs) poloidally symmetric cavitation occurring in an annulus ($\Delta r \simeq 0.02$-0.04 m) near the liner ($r = a = 0.2$ m). The pulsed disturbance is primarily due to radial loss of plasma to the liner rather than to toroidal convection. The peak ion flux to the liner is Γ /sub i/ $\geqq 10^{23}$ m^{-2} s^{-1} during an impulse. The cavitations leave an imprint in the density profile that propagates toroidally (against I /sub PHI/) with a speed about (1-2) x 10^4 m/s. Another important fluctuating quantity, the poloidal voltage at the plasma boundary, is dominated by impulsive spikes whose full-width is similar to the density-cavitations risetime. The spikes propagate toroidally (against I /sub PHI/) with a speed about 3 x 10^4 m/s and survive for a pathlength $\leqq$ 1 m. The voltage spikes and density cavitations are highly correlated.

31263 **Thomson scattering measurements in the FRX-C device.** Rej, D.J.; Armstrong, W.T.; Bartsch, R.R.; Chrien, R.E.; Cochrane, J.C.; Kewish, R.W.; Klingner, P.L.; McKenna, K.F.; Sherwood, E.G.; Siemon, R.E. (Los Alamos National Laboratory, Los Alamos, NM). pp 37-38 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

Electron temperature measurements have been made on the field-reversed configuration (FRC) plasmas generated in the FRX-C experiment at Los Alamos. An 8 joule, 5 mrad divergence, 30 ns pulse length ruby laser is fired end-on and focussed to a point 15 cm from the axial midplane of the 2-m-long O-pinch coil. The radial position of the focus, ranging between r = O and 15 cm, can be changed on a shot-to-shot basis. The detector located perpendicular to the incident beam consists of a f/5, 7 channel, triple grating polychromator. /sup 2,3/ T /sub e/ data were taken at two experimental conditions corresponding to 20 mtorr and 5 mtorr D_2 fill pressures.

31264 **Invited paper: confinement scaling, equilibrium, and stabilization studies in FRX-C.** Siemon, R.E.; Armstrong, W.T.; Bartsch, R.R.; Chrien, R.E.; Cochrane, J.C.; Kewish, R.W.; Klingner, P.L.; Linford, R.K.; McKenna, K.F.; Rej, D.J. (Los Alamos National Laboratory, Los Alamos, NM). pp 37 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

The field-reversed configuration (FRC) is a low aspect ratio, highly prolate compact toroid without toroidal field. ERC's are produced in the Los Alamos FRX-C device, a 50-cm i.d. x 200-cm long field reversed theta pinch. Passive mirrors of 20-cm axial extent and 44-cm i.d. provide an on-axis mirror ratio of 1.17 at each end. Detailed experimental and theoretical studies have been directed toward determining the confinement scaling, and equilibrium and stability properties of the FRC's generated in FRX-C. Measurements have been made over a wide range of plasma parameters (T /sub e/ + T /sub i/ $\simeq$ 200-700 eV, n /sub e/ $\simeq$ 2-5 x 10^{15} cm^{-3}, and $\langle\beta\rangle \simeq 0.9$). The FRC particle confinement time (/tau/ /sub N/) scaling has been obtained using both end-on holographic interferometry, and a combination of side-on quadrature interferometry and axial excluded-flux array. The measured /tau/ /sub N/ 's of up to 190 μs are consistent with R^3//rho/ /sub io/ scaling (where R is the FRC major radius and /rho/ /sub io/ is the ion gyroradius in the external magnetic field) and are in good agreement with theoretical predictions based on lower-hybrid-drift induced particle transport. The energy containment times, estimated from a global equilibrium model, are about /tau/ /sub N/ /2, indicating that energy loss through thermal conduction and/or radiation is comparable to the energy lost through particle transport. The closed-flux containment times are within a factor of 3-7 smaller than calculated using classical resistivity.

31265 **Scaling experiments on plasma opening switches for inductive energy storage applications.** Boller, J.R.; Commisso, R.J.; Cooperstein, G.; Goldstein, S.A.; Neri, J.M.; Ottinger, P.F.; Renk, T.J.; Shipman, J.D.; Stephanakis, S.J.; Weber, B.V. (Naval Research Laboratory, Washington, DC). pp 34 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

A new type of fast opening switch for use with pulsed power accelerators is examined. This Plasma Opening Switch (POS) utilizes an injected carbon plasma to conduct large currents (circa 1 MA) for up to 100 ns while a vacuum inductor (circa 100 nH) is charged. The switch is then capable of opening on a short (circa 10 ns) timescale and depositing the stored energy into a load impedance. Output pulse widths and power levels are determined by the storage inductance and the load impedance. The switch operation is studied in detail both analytically and experimentally. Experiments are performed at the 5 kJ stored energy level on the Gamble I generator and at the 50 kJ level on the Gamble II generator. Results of both experiments are reported and the scaling of switch operation is discussed.

31266 **Cesium transpiration through a negative-ion forming electrode.** Fink, J.H. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). pp 66-67 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

In self-extracting sources of negative ions, conflicting processes simultaneously build and destroy the cesium coverage of the negativeion forming electrode. Optimum negative-ion emission is thought to occur at about 65% of a mono-atomic cesium layer on a molybdenum surface and the coverage attained experimentally is less than optimum. To increase the negative-ion emission an additional source of cesium is needed. This article proposes cesium transpiration through the negative-ion-forming. The negative-ion-forming-electrode is placed in a cesium-hydrogen discharge at a negative bias of 150 volts. Hydrogen is absorbed on the electrode surface along with a cesium buildup, contributed by the neutral component of cesium escaping the discharge plus whatever fraction of cesium ions stick, having been accelerated across the 150 volt sheath.

31267 **Distribution of electric fault currents in MHD faraday generators.** Kuo, S.P.; Levi, E.; Liu, C.C. (Polytechnic Institute of New York, Farmingdale, NY). pp 9 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

The information about the spatial distributions of currents and voltages is important for an understanding of the MHD channel performance in several aspects. The previous analysis by using an equivalent[1] circuit for MHD Faraday Generators shows that the

fault currents may exceed the rated currents by one order of magnitude. If, as could be expected, these large currents were drawn locally and directly from the inner core of the plasma, then its gross flow rate would be affected. If, instead, the bulk of the plasma is shielded from the disturbance and the perturbation is restricted to a thin layer near the boundary surfaces, then the resulting body force and heating affects the fluid dynamics of the boundary layer and the mode of current transfer to the electrodes. In addition, knowledge of the current distribution at the surface of the electrode itself provides guidance for its design and for the design of the interelectrode insulation.

31268 **Comparison of diode voltage and ion energy for an intense pulsed ion-beam diode.** Young, F.C.; Boller, J.R.; Goldstein, A.; Shyke, A.; Stephanakis, S.J. (Naval Research Laboratory, Washington, DC). pp 33-34 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts only.

A comparison is made of the voltage applied to an intense pulsed ion-beam diode and the energy of deuterons emitted from the diode. The authors measured the energy of deuterons from diodes operating at peak voltages ranging from 0.5 to 1.5 MV. The deuteron energy is determined by neutron time-of-flight (TOF) using d-d neutrons. Deuterons from a CD_2-coated anode bombard a thin CD_2 target located at the cathode to produce neutrons which are detected at 0°. Measured voltage and ion current traces are used to calculate the neutron TOF trace. The deuteron energy is determined by adjusting the magnitude of the voltage so that the calculated TOF trace agrees temporarily with the measured trace. Peak deuteron energy is determined to a precision of 5 to 10% for a flight path of 7.7m. The diode voltage is deduced from a capacitive voltmeter with an inductive correction for the difference between the voltmeter and diode locations.

31269 **An experimental study of a quasi-optical gyrotron for fusion applications.** Park, S.Y.; Bergeron, G.L.; Fliflet, A.; Granatstein, V.L.; Kim, K.J.; Read, M.E.; Seeley, R. (Naval Research Laboratory, Washington, DC). pp 39 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

In this paper the authors report results of a proof of principle experiment of a quasi-optical gyrotron. This type of gyrotron differs from "conventional" gyrotrons in that an optical (Fabry-Perot), rather than a microwave, cavity is used. The optical cavity has a substantially lower mode density than that of a conventional microwave cavity. Therefore, a large cavity can be used, resulting in relatively low ohmic losses at the mirrors. In addition, with the cavity axis perpendicular to that of the electron beam, the collection of the beam is uncoupled from the microwave output guide. Finally, the cavity is mechanically tunable. The present experiment is expected to produce approximately 100 KW at 120 GHz, with a pulse length of 1.5 μs. An efficiency of >25% is expected. Experimental results and comparison with theory are discussed.

31270 **Invited paper: high power gyrotrons for fusion applications.** Fliflet, A.W.; Carmel, Y.; Chu, K.R.; Dialetis, D.; Granatstein, V.L.; Read, M.E.; Seeley, R. (Naval Research Laboratory, Washington, DC). pp 38-39 of 1983 IEEE international conference on plasma science. New York, NY; IEEE (1983). (CONF-830590—).

From IEEE international conference on plasma science; San Diego, CA, USA (25 May 1983).

Abstracts Only.

An experimental gyrotron with an output power level > 1 MW in the TE^{o}_{6s} mode at 94 GHz is in preparation at NRL. The experiment will be run in a pulsed mode but should be scalable to CW operation. This paper will discuss the issues impacting the design of this experiment with emphasis on the mode selectivity and efficiency of the microwave circuit, and on the beam formation system. The issue of mode selectivity is critical to the development of high power, high frequency gyrotrons due to the necessity of using highly over-moded waveguide structures in the interaction region. As output power and frequency increase, the range of operating parameters which allow stable operation of conventional gyromonotrons becomes increasingly limited. This effect often severely limits the efficiency in the desired operating mode.

99 GENERAL AND MISCELLANEOUS

31271 **(DOE/ER—0268) Nuclear engineering enrollments and degrees, 1985.** (Oak Ridge Associated Universities, Inc., TN (USA)). Mar 1986. Contract AC05-76OR00033. 65p. NTIS, PC A04/MF A01 - GPO. File Number TI86009876.

The 1985 nuclear engineering survey included 66 academic institutions. Sixty-four institutions reported numbers of enrollments and degrees, although three of these have officially suspended their programs. Undergraduate enrollments in 1985 decreased by 162 students (-9%) from 1984. Masters candidate enrollments also decreased in 1985 with 601 full-time students and 234 part-time students for a total of 835, a decrease of 89 students (-10%) with the number of full-time students accounting for the largest portion of the decrease. The number of doctoral candidates rose by 23 (+4%) over 1984; however, the number of US citizen Ph.D. candidates declined by 11 (-4%). The number of degrees awarded decreased at all levels from 1984 to 1985: bachelor's degrees by 68 (-9%), masters degrees by 10 (-3%), and doctoral degrees by 19 (-14%).

31272 **(PNL—5812) General design of a technical assistance program to help DOE/prime contractor buyers in doing business with small disadvantaged businesses.** Wood, M.T.; Radford, L.R.; Saari, L.M.; Wright, J. (Pacific Northwest Labs., Richland, WA (USA)). Apr 1986. Contract AC06-76RL01830. 38p. (BHARC—400/86/005). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009938.

This report offers a design and recommendations for implementing a program of education to assist Department of Energy buyers and procurement officers in increasing the quality and quantity of small disadvantaged business (DB) participation in their contracted work. The recommendations are based on a previous companion report, "Issues in Contracting with Small Minority Businesses," from which technical assistance and related needs were derived. The assistance program is based on buyer and disadvantaged-business needs, as determined from synthesizing the results of interviews with over two dozen minority business leaders and procurement officers.

31273 **(UCRL—94518) Training and development and education at Lawrence Livermore National Laboratory.** Holmes, H.C. (Lawrence Livermore National Lab., CA (USA)). Jan 1986. Contract W-7405-ENG-48. 7p. (CONF-860586—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010158.

From World conference on continuing education; Lake Buena Vista, FL, USA (7 May 1986).

In addition to the cafeteria of opportunities LLNL provides its employees, there are other factors that create an atmosphere that affirms education as important and encourages an employee to decide on his own career needs. For example, employees are given full information on all on-site activities. Each quarter every employee is mailed complete course descriptions and schedules of LLNL sponsored programs. As another example, almost all courses are taught during normal work hours. Through a combination of Laboratory policy, practices and diversity of options, LLNL management actively commits to the career development of its employees.

31274 **Current Energy Patents: a current awareness journal.** Thoeming, G. (ed.). (Dept. of Energy, Technical Information Center, Oak Ridge, TN). *Current Energy Patents;* **86**: No. 1, vp(Jan 1986). (PB—86-902801; CEP—86/1).

Available from National Technical Information Service, Springfield, VA 22161 on a subscription basis at $85.00 per volume (calendar) year.

This monthly current awareness journal provides abstracting and indexing coverage of the international patent literature, including patent applications, that concerns any aspect of energy produc-

tion, conservation, and utilization. The journal includes all patents entered into the Energy Data Base. The literature is arranged by subject category and inventor, subject, and patent number.

9902 Mathematics And Computers

REFER ALSO TO CITATION(S) 30035, 30959

31275 (AEEW-M—2234) Versatile computer based system for data acquisition manipulation and presentation. Bardsley, D.J. (UKAEA Atomic Energy Establishment, Winfrith). Dec 1985. 47p. Atomic Energy Establishment, Winfrith Dorchester, Dorset, England. File Number TI86901295.

A data acquisition system based on a Midrodata M1600L data logger and a Digital Equipment Corporation VT103 computer system with associated storage and display peripherals is described. Discussions of the data acquisition system, the data logger, experimental applications, data processing, hardware processing facilities, software processing facilities, data presentation, hardware plotting facilities, and software plotting facilities are included. Operating instructions for the logger and its application to experimental measurements are included in the appendices. 1 ref., 9 figs., 3 tabs. (DWL)

31276 (ANL/TM—431-Rev.) Electronic mail at ANL. Revision. Finkel, B.; Andre, M.; Janoski, K. (Argonne National Lab., IL (USA)). Mar 1986. Contract W-31-109-ENG-38. 191p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE86009663.

Electronic Mail at ANL discusses concepts, issues, and commands basic to electronic mail and describes the capabilities and limitations of the electronic mail systems currently in place at Argonne National Laboratory, with an emphasis on communication through the BITnet network. The primary purpose of this document is to complement the detailed information found in vendor documents on electronic mail. Chapter 1 explains how electronic mail may benefit you and answers many basic questions about this communications system. It defines electronic mail, compares it with conventional mail and telephone communication, lists the benefits electronic mail users enjoy, and familiarizes readers with the Argonne electronic mail universe. Chapter 2 defines three electronic mail concepts: (1) addresses, (2) networks, and (3) gateways. It also explains how to find electronic mail addresses, how to communicate electronically when at home or traveling, and how systems format electronic mail files. Chapter 3 explains how users send electronic mail through the electronic mail systems at Argonne. Structured descriptions of each mail system provide answers to basic questions on how to use each system. Note that the subsection concerning Wylbur electronic mail is the only documentation available on that subject. Chapter 4 describes which networks and network gateways are available to Argonne electronic mail users. This chapter provides such information as what the networks are, how big they are, and where they are located. 1 fig., 5 tabs.

31277 (ANL/TM—438) Guide to sharing personal computer resources via local area networks. Winkler, L. (Argonne National Lab., IL (USA)). Mar 1986. Contract W-31-109-ENG-38. 69p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86009665.

This Guide is for professional staff who commonly need computing tools on personal computers, minicomputers, mainframe computers, and supercomputers. It provides information and recommendations about personal computer local area networks in the context of the larger scheme of computing tools and services at the Laboratory. The material presented here is for the person considering installation of a personal computer local area network. Chapter 1 introduces the reader to the concept of personal computer local area networks and provides background material on networking. Chapter 2 summarizes Computing Services' evaluation of personal computer local area networking in general terms. Chapter 3 describes the technical and functional details of Computing Services' Personal Computer Local Area Network Evaluation and Demonstration Project. Chapters 4 and 5 are for individuals who are familiar with personal computing and who will be responsible for establishing a local area network. Chapter 4 covers technical issues relating to the prototype network installation in Building 221. Chapter 5 warns potential users what to expect when establishing a local area network. 7 figs., 9 tabs.

31278 (EUR—9874) Elasto-plastic benchmark calculations. Step 1: verification of the numerical accuracy of the computer programs. Corsi, F. (Commission of the European Communities, Luxembourg). 1985. 53p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751613.

In connection with the design of nuclear reactors components operating at elevated temperature, design criteria need a level of realism in the prediction of inelastic structural behaviour. This concept leads to the necessity of developing non linear computer programmes, and, as a consequence, to the problems of verification and qualification of these tools. Benchmark calculations allow to carry out these two actions, involving at the same time an increased level of confidence in complex phenomena analysis and in inelastic design calculations. With the financial and programmatic support of the Commission of the European Communities (CEE) a programme of elasto-plastic benchmark calculations relevant to the design of structural components for LMFBR has been undertaken by those Member States which are developing a fast reactor project. Four principal progressive aims were initially pointed out that brought to the decision to subdivide the Benchmark effort in a calculations series of four sequential steps: step 1 to 4. The present document tries to summarize Step 1 of the Benchmark exercise, to derive some conclusions on Step 1 by comparison of the results obtained with the various codes and to point out some concluding comments on the first action. It is to point out that even if the work was designed to test the capabilities of the computer codes, another aim was to increase the skill of the users concerned.

31279 (EUR—10115) EURDYN-1D: a computer code for the one-dimensional non-linear dynamic analysis of structural systems. Description and users' manual (release 1). Casadei, F.; Halleux, J.P. (Commission of the European Communities, Ispra (Italy). Joint Research Centre; Commission of the European Communities, Luxembourg). 1985. 197p. NTIS (US Sales Only), PC A09/MF A01. File Number DE86751612.

The goal of the present report is to provide for a comprehensive users' manual describing the capabilities of the computer code EURDYN-1D. It includes information and examples about the type of problems which can be solved with the code and explanation on how to prepare input data and, how to interpret output results. The field of applications of EURDYN-1D is the one dimensional dynamic analysis of general structural systems and the code is particularly suited for fast transient events involving propagation of longitudinal mechanical waves (subsonic) in structures. Both geometrical and physical non-linearities can be taken into account. Typical examples are impact problems, fast dynamic loading due the explosions or sudden release for initial loads due to failures, etc. To these classes belong many problems encountered in the reactor safety field as well as in more common and general technological applications.

31280 (N—86-16945) Multiprocessor sparse L/U decomposition with controlled fill-in. Final report. Alaghband, G.; Jordan, H.F. (National Aeronautics and Space Administration, Hampton, VA (USA). Langley Research Center). Oct 1985. 39p. NTIS, PC A03/MF A01.

Generation of the maximal compatibles of pivot elements for a class of small sparse matrices is studied. The algorithm involves a binary tree search and has a complexity exponential in the order of the matrix. Different strategies for selection of a set of compatible pivots based on the Markowitz criterion are investigated. The competing issues of parallelism and fill-in generation are studied and results are provided. A technque for obtaining an ordered compatible set directly from the ordered incompatible table is given. This technique generates a set of compatible pivots with the property of generating few fills. A new hueristic algorithm is then proposed that combines the idea of an ordered compatible set with a limited binary tree search to generate several sets of compatible pivots in linear time. Finaily, an elimination set to reduce the matrix is select-

ed. Parameters are suggested to obtain a balance between parallelism and fill-ins. Results of applying the proposed algorithms on several large application matrices are presented and analyzed.

31281 (N—86-17267, pp vp) **Image processor architectures and a data-driven image processore: TIP-1.** Temma, T. 1984. NTIS, PC A14/MF A01. (NAL-SP—3; CONF-8407170—).

From 2. NAL symposium on aircraft computational aerodynamics; Tokyo, Japan (5 Jul 1984).

Many high speed image processors have been developed to date. In this paper, these processors are classified from the view point of parallel implemenon of identical processor elements and pipeline implementation with many types of processor elements. These processors are designed not only for high speed processing capabilities but also for compactness in hardware size. An image processor TIP-1 (Template-controlled Image Processor-1) was proposed and has been developed as progressive architecture for pipeline mechanisms. TIP-1 architecture is presented and an advanced system, TIP-3, using VLS1 chips, is proposed.

31282 (N—86-17997) **Partitioning problems in parallel, pipelined and distributed computing. Final Report.** Bokhari, S. (National Aeronautics and Space Administration, Hampton, VA (USA). Langley Research Center). Nov 1985. 34p. NTIS, PC A03/MF A01.

The problem of optimally assigning the modules of a parallel program over the processors of a multiple computer system is addressed. A sum-bottleneck path algorithm is developed that permits the efficient solution of many variants of this problem under some constraints on the structure of the partitions. In particular, the following problems are solved optimally for a single-host, multiple satellite system: partitioning multiple chain structured parallel programs, multiple arbitrarily structured serial programs and single tree structured parallel programs. In addition, the problems of partitioning chain structured parallel programs across chain connected systems and across shared memory (or shared bus) systems are also solved under certain constraints. All solutions for parallel programs are equally applicable to pipelined programs. These results extend prior research in this area by explicitly taking concurrency into account and permit the efficient utilization of multiple computer architectures for a wide range of problems of practical interest.

31283 (N—86-17998) **Research in computer science, semi-annual report.** Ortega, J.M. (Virginia Univ., Charlottesville (USA)). Jan 1986. 8p. NTIS, PC A02/MF A01.

Various graduate research activities in the field of computer science are reported. Among the topics discussed are: (1) failure probabilities in multi-version software; (2) Gaussian elimination on parallel computers; (3) three dimensional Poisson solvers on parallel/vector computers; (4) automated task decomposition for multiple robot arms; (5) multi-color incomplete Cholesky conjugate gradient methods on the Cyber 205; and (6) parallel implementation of iterative methods for solving linear equations.

31284 (SAND—85-2389) **Practical paradigm for parallel processing problems.** Davidson, G.S. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1986. Contract AC04-76DP00789. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009274.

Data flow computers achieve high performance by keeping as many processing elements busy as possible for a given algorithm. However, without specialized architectures, the synchronization overhead of data-driven computations can prevent significant speedup. To address this problem, the concept of task flow is developed for more general purpose multiprocessors. Task flow differs from data flow in the amount of computation between synchronizations (at the expense of some parallelism). A software technique is described that implements task flow for general purpose multiprocessors with local and shared memories. A SANDAC-IV multiprocessor example of this technique is given, together with timing results. 8 refs., 10 figs., 1 tab.

31285 (SAND—85-2511) **Verification study of SHELL SHOCK.** Allen, J.J. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1986. Contract AC04-76DP00789. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86009986.

A verification study of the axisymmetric finite element code, SHELL SHOCK is documented. This study investigates the accuracy of the various features of SHELL SHOCK, which are used. The problems presented in this study were chosen for their simplicity and known solutions, or for the ability to model the problem accurately in another finite element code. SHELL SHOCK was shown to be an accurate code; however, the beam element has certain limitations. An alternative connection element was developed which would alleviate the beam element limitations. 5 refs., 25 figs., 4 tabs.

31286 (SAND—86-0249) **Revision of Primary Standards Laboratory's methods to calculate water vapor pressures.** Odom, M.K. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1986. Contract AC04-76DP00789. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009985.

Accurate water vapor pressure values are important for humidity calibrations in the Primary Standards Laboratory. Updated and enhanced vapor pressure equations are given. Enhancement takes the presence of air into account. Computer programs that use the updated and enhanced vapor pressure equations are discussed. Included are descriptions of these programs, sample inputs and outputs, structural relationships between main programs, subroutines, and functions, and complete listings of these program elements. 4 refs. 3 tabs. (DWL)

31287 (UCID—20721) **MVUSRS utility reference manual.** Brengle, T.A. (Lawrence Livermore National Lab., CA (USA)). Nov 1985. Contract W-7405-ENG-48. 71p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86009934.

The MVUSRS utility assists in the moving of TOPS-10/20 user accounts to VMS systems. MVUSRS runs on the source TOPS-10/20 system and combines user account information from the TOPS system (from REACT on TOPS-10 or from DLUSER on TOPS-20) with input from the operator of the utility to generate a VMS DCL COM file. This COM file can then be shipped to the target VMS system and executed. MVUSRS is known to work with TOPS-10 Version 4.01, TOPS-20 Version 5.1, and VMS Version 4.1. Other versions may work, but have not been tested. In particular, it is unlikely that MVUSRS will work with versions of VMS prior to 4.0 since much has been made of the enhanced user account information available in Version 4.0. The MVUSRS source listing is provided. (DWL)

31288 (UCRL—94310) **Evolving directions of PC applications in electromagnetics analysis and design.** Miller, E.K.; Deadrick, F.J. (Kansas Univ., Lawrence (USA). Dept. of Electrical and Computer Engineering; Lawrence Livermore National Lab., CA (USA)). 25 Mar 1986. Contract W-7405-ENG-48. 7p. (CONF-8604170—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009695.

From Tactical communication conference; Fort Wayne, IN, USA (22 Apr 1986).

This paper serves as both an introduction to electromagnetic analysis and design software for the personal computer, and also as a short introduction to the evolution of computer technology which has made such analysis possible. Progress in microprocessor technology, memory devices, mass storage devices, and software are outlined. The increasing availability and capabilities of modeling software now provides in a micro- or personal computer environment some modeling procedures formerly limited to mini- or mainframe computers. These and other aspects of the present status and anticipated future directions of PC applications in Electromagnetics are discussed in the paper. 2 figs., 2 tabs. (DWL)

31289 (UCRL—94340) ARC-OLOGY via TELL-A-GRAF. Biggers, D. (Lawrence Livermore National Lab., CA (USA)). 10 Mar 1986. Contract W-7405-ENG-48. 16p. (CONF-860363—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009698.

From ISSCO week; New Orleans, LA, USA (10 Mar 1986).

This paper addresses the problem of drawing a circle or an arc, or bending text strings around arcs using TELL-A-GRAF software. ARC-OLOGY is a front-end to TELL-A-GRAF and was developed to solve this problem. With this (or a similar) capability the TELL-A-GRAF user will be more able to include circles, arcs and arched text in the design of logos, icons and other graphic representations. This paper describes the process by which the ARC-OLOGY front-end generates the necessary TELL-A-GRAF data. The capability is available via the Flop-Swap for both Nomad2 and dBASE III environments. However, for users desiring this capability in another environment, this description can also be used as basic specifications for an in-house developed front-end. (DWL)

31290 Algorithms + Alchemy = Architectures. Douglass, R.J. (Computer User Services, Los Alamos National Lab., Los Alamos, NM). pp 105-114 of Algorithmically specialized parallel computers. Snyder, L.; Jamieson, L.H.; Gannon, D.B.; Siegel, H.J. Orlando, FL; Academic Press (1985).

Algorithmically specialized architectures are usually designed and built to increase execution speed by taking advantage of parallelism inherent in a particular algorithm. In serial systems, algorithmically specialized machines are created through the alchemy of software whereby a program is mapped onto a general purpose serial computer. This paper provides one answer for the question of why fast general purpose parallel machines are not being transformed into specialized architectures with software. Part of the answer is the difficulty in mapping an algorithm onto a parallel architecture without introducing a new serial component. A solution will follow from a better understanding of the mapping process and by seeking general purpose techniques for optimizing it. A simple image processing task on the massively parallel processor (MPP) is used to illustrate the problem, and a software solution involving program flow analysis is presented.

31291 Two parallel formulations of particle-in-cell models. Buzbee, B.L. (Computing Div., Los Alamos National Lab., Los Alamos, NM). pp 223-232 of Algorithmically specialized parallel computers. Synder, L.; Jamieson, L.H.; Gannon, D.B.; Siegel, H.J. Orlando, FL; Academic Press (1985).

This paper discusses parallel formulation of PIC models for master/slave architectures and ring architectures. Because interprocessor communication can be a decisive factor in the overall efficiency of a parallel system, the authors show how to divide these models into large granules that can be executed in parallel with relatively little need for communication. They also report measurements of speed-up obtained from experiments on the UNIVAC 1100/84 and the Denelcor HEP.

31292 Assessing the significance of a spatial correlogram. Oden, N.L. (Brookhaven National Labs., Upton, NY). *Geographical Analysis;* **16**: No. 1, 2-16(Jan 1984).

Simulations comparing the power of the Q-test to the power of several other techniques under several alternative hypotheses reveal the following. The decision rule involving inspection of only the lag-1 autocorrelation coefficient is insensitive to certain forms of spatial dependence, for example, dependence involving interactions that are strongest at high-order lags. A modified Kooijman's (1976) technique is roughly equal in power to the other methods investigated, but requires a simulation for each correlogram tested. Kooijman's original recommendation for estimating the variance of I/max/ can lead to negative variance estimates and should therefore not be used. The Sidak (1967) and Bonferroni methods, which are computationally very simple, are preferable to the Q-test when there are few distance classes and weak spatial pattern. As pattern intensity and number of distance classes increase, the Q-test becomes more powerful.

9903 Information Handling

31293 (ANL/TM—436) Computing Services Software Library. Clark, L.M.; Jones, W.H. (Argonne National Lab., IL (USA)). Mar 1986. Contract W-31-109-ENG-38. 52p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86009491.

This technical memorandum serves as a practical guide for managers, supervisors, programmers, analysts, and other data processing personnel who need to consult the documentation or use the software available in the Software Library. Policies and procedures necessary to preserve the software documentation and protect the Laboratory's investment in software are presented. Included are sections on responsibilities of the Software Librarian and Software Coordinators, software change control policy, systems programming section software maintenance tools, information systems section software maintenance tools and use of the LIBRARY exec. The LIBRARY exec, which serves as the Master Index, provides on-line information about documents. 2 figs., 1 tab. (DWL)

31294 User interaction model for manipulation of large data sets. Thomas, J.J. (Pacific Northwest Lab., Richland, WA). pp 118-128 of Computer science and statistics: proceedings of the 14th symposium on the interface. Heiner, K.W.; Sacher, R.S.; Wilkinson, J.W. (eds.). New York, NY; Springer-Verlag (1983). Contract AC06-76RL01830.

From 14. symposium on the interface; Troy, NY, USA (5-7 Jul 1982).

The process of interactive data analysis on large data sets can be inhibited if not made impossible by a poorly designed interactive operating environment. This paper describes a two-way interaction model to illustrate the impact of large data sets on interactive data analysis with particular emphasis on the data manipulation language. This interaction model takes into account many of the principles in human factors and cognitive psychology. The model illustrates parallel as well as sequential environments for data manipulation with a high degree of control for the data analysis process. Examples of interaction sequences to illustrate the presented concepts are provided from an interactive data editor specifically designed for editing and subsetting large data sets. Experience gained in implementing a system tailored to analyze large data sets shows that the data set size has a direct impact on the human interface to a data management and analysis system. 25 references, 2 figures.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Argonne National Lab., Idaho Falls, ID (USA)
Measurements of $^{10}B(n,He)$ reaction rates in a mockup control rod in ZPPR, 11:29777 (R;US)

Argonne National Lab., IL (USA)
Bioconversion: a new technology for waste and sludge disposal. Workshop proceedings, 11:29460 (R;US)
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume I. Equations and numerics, 11:29800 (R;US)
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume II. User's manual, 11:29801 (R;US)
Computing Services Software Library, 11:31293 (R;US)
Diffractive hard scattering and the SSC, 11:30848 (R;US)
Electronic mail at ANL. Revision, 11:31276 (R;US)
Estimates of long-term trends in sulfur deposition, 11:30525 (R;US)
Gas-bubble growth mechanisms in the analysis of metal fuel swelling, 11:30082 (R;US)
Guide to sharing personal computer resources via local area networks, 11:31277 (R;US)
Handbook for quick cost estimates. A method for developing quick approximate estimates of costs for generic actions for nuclear power plants, 11:29788 (R;US)
K-meson production by nu/sub μ/-deuterium reactions near threshold: implications for nucleon-decay searches, 11:30824 (R;US)
Model for LMFBR core transient analysis in real-time, 11:29779 (R;US)
Particle and vapor deposition in coal-fired gas turbines, 11:29669 (R;US)
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys, 11:30083 (R;US)
Roughening, recession, and chemical alteration of marble and limestone sample surfaces during atmospheric exposure in the eastern United States, 11:30526 (R;US)
Scoping study of the potential effectiveness of an operational safety reliability program in addressing generic safety problems, 11:29860 (R;US)
Solute segregation and microstructural evolution in ion-irradiated vanadium-base alloys, 11:30084 (R;US)
US/JAERI calculational benchmarks for nuclear data and codes intercomparison. Article 8, 11:31032 (R;US)

Arizona Univ., Tucson (USA). Coll. of Engineering
Waste Management '85: Waste Isolation in the US - Technical Programs and Public Education. Volume 2. Waste policies and programs, low-level waste, 11:29317 (R;US)

Arizona Univ., Tucson (USA). Dept. of Chemical Engineering
Aerosol formation from pulverized coal combustion. Final technical report, 11:29186 (R;US)

Army Armament Research and Development Command, Dover, NJ (USA)
Spectral and parameter estimation problems arising in the metrology of high performance mirror surfaces, 11:30955 (R;US)

Associacao Brasileira de Quimica, Rio de Janeiro
Abstracts of the 26. Brazilian Congress on Chemistry, 11:30179 (R;BR;In Portuguese)

Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee
Identification of highly-ionized xenon spectra (Xe XXVI through Xe XXXI) excited in the plasma of the TFR Tokamak, 11:30966 (R;FR)
Theoretical and experimental study of modes associated to ion cyclotron heating on TFR, 11:30967 (R;FR;In French)

Atomic Energy of Canada Ltd., Pinawa, Manitoba. Whiteshell Nuclear Research Establishment
Canadian nuclear fuel waste management program, 11:29314 (R;CA)
Canadian Nuclear Fuel Waste Management Program. 1983 annual report, 11:29309 (R;CA)
Effect of pH on the stability of smectite, 11:30148 (R;CA)
Fuel characterization research for the Canadian Nuclear Fuel Waste Management Program, 11:29315 (R;CA)
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
Hydrothermal flow-through apparatus to simulate leaching of nuclear waste forms under quasi-dynamic conditions, 11:29431 (R;CA)

Hydrothermal stability of bentonite-based buffer materials, 11:30149 (R;CA)
Model for growth of beta-phase particles in zirconium-2.5 wt% niobium, 11:30119 (R;CA)
Photochemical method for radioiodine abatement, 11:29311 (R;CA)
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)
Thermal properties of clay-based buffer materials for a nuclear fuel waste disposal vault, 11:30147 (R;CA)
Two-phase natural circulation experiments in a pressurized water loop with CANDU geometry, 11:29776 (R;CA)
Use of the food-chain model FOOD III and the soil model SCEMR to assess irrigation as a biosphere pathway, 11:30579 (R;CA)
Verification tests of a high-temperature transverse creep model for Zr-2.5 wt % Nb pressure tubes, 11:30070 (R;CA)

Auburn Univ., AL (USA). Dept. of Physics
Complex geometric optics theory in an inhomogeneous plasma. Appendix B, 11:30962 (R;US)
Mode conversion of lower hybrid waves at high ion cyclotron harmonics. Appendix F, 11:30963 (R;US)
Theoretical studies of the heating of toroidal plasmas with radiofrequency electromagnetic radiation. Progress report, July 1, 1985-June 30, 1986, 11:30965 (R;US)

Australian National Univ., Canberra. Dept. of Nuclear Physics
Angular momentum partition in heavy ion induced fission and the effects of shells on gamma-ray multiplicities, 11:30914 (R;AU)
Determination of $B(E3;0_1^+ \rightarrow 3_1)$ values for the stable isotopes of cadmium, 11:30910 (R;AU)
Electron capture decay of ^{148}Tb, 11:30915 (R;AU)
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
Heavy ion induced fusion/fission and barrier penetration. Lecture notes, 11:30929 (R;AU)
On the electron capture decay energies of ^{153}Gd and ^{175}Hf, 11:30917 (R;AU)
Quadrupole moment of ^{196}Pt - a crucial test of nuclear models, 11:30919 (R;AU)
Short lived isomers in ^{211}Rn and ^{210}Rn, 11:30920 (R;AU)
Spectroscopy of high spin states in sup(211,212,213)Fr, 11:30922 (R;AU)
Spectroscopy of ^{166}W and ^{167}W and alignment effects in very neutron-deficient tungsten nuclei, 11:30916 (R;AU)

B

Battelle Human Affairs Research Center, Seattle, WA (USA)
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)

Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
Geostatistical analysis of potentiometric data in Wolfcamp aquifer of the Palo Duro Basin, Texas, 11:30739 (R;US)

Oak Ridge Gaseous Diffusion Plant, TN (USA)
Comparison of a boundary element and finite element solution of an electrochemical plating problem, 11:30328 (R;US)
International Atomic Energy Agency UF_6 cascade header pipe test loop: safety assessment, 11:29453 (R;US)
Load-cell-based weighing system for weighing 9.1 and 12.7-tonne UF_6 cylinders, 11:29452 (R;US)
Thermal analysis of UF_6 cylinder inside a protective overpack, 11:30385 (R;US)
Oak Ridge National Lab., TN (USA)
Acid-split flowsheets for uranium-plutonium partitioning without a reductant, 11:29293 (R;US)
Alpha counting and spectrometry using liquid scintillation methods, 11:30312 (R;US)
Application of a geographic information system in the study of acidic deposition, 11:30609 (R;US)
Assessment of the safety implications of control at the Oconee 1 nuclear plant. Final report, 11:29854 (R;US)
Automated sensitivity analysis using the GRESS language, 11:30741 (R;US)
Biology Division progress report, October 1, 1984-September 30, 1985, 11:30720 (R;US)
Characterization of the National Low-Temperature Neutron Irradiation Facility, 11:29818 (R;US)
Chemical vapor infiltration of fiber-reinforced ceramic composites, 11:30143 (R;US)
Collection and analysis of trace metals in continental precipitation at forested sites in the Southeastern United States, 11:30524 (R;US)
Compact ignition tokamak design studies, 11:31024 (R;US)
Compact ignition tokamak design studies, 11:31025 (R;US)
Compact ignition tokamak design studies: design and analysis listing and examples. Documentation listing, 11:31068 (R;US)
Computational methodology for the Oak Ridge Research Reactor (ORR) and Bulk Shielding Reactor (BSR): the VICTORR input processing code for the BOLD VENTURE system. Volume 2, 11:29821 (R;US)

Configuration development and structural assessment of the FEDC ignitor concept, 11:31030 (R;US)
Consolidated Fuel Reprocessing Program. Progress report, October 1-December 31, 1985, 11:29296 (R;US)
Corrosion of materials by high-temperature industrial combustion environments: a summary, 11:30124 (R;US)
Description of a research reactor control system using a programmable controller, 11:29817 (R;US)
Design and final safety analysis report for vertical fission product release apparatus in hot Cell B, Building 4501, 11:29855 (R;US)
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 11:30652 (R;US)
Design, synthesis and evaluation of redox radiopharmaceuticals: a potential new approach for the development of brain imaging agents, 11:30651 (R;US)
Development of ferritic steels for reduced activation: the US program, 11:30081 (R;US)
Directions for improved fusion reactors, 11:31076 (R;US)
Drop testing at the Oak Ridge National Laboratory, 11:30333 (R;US)
Effect of cold work on tensile behavior of irradiated type 316 stainless steel, 11:30086 (R;US)
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys, 11:30085 (R;US)
Effects of time and other variables on fission product release rates, 11:29748 (R;US)
Eighth annual progress report on special purpose materials for magnetically confined fusion reactors, 11:31067 (R;US)
Evaluation of the Motor-Operated Valve Analysis and Test System (MOVATS) to detect degradation, incorrect adjustments, and other abnormalities in motor-operated valves, 11:29802 (R;US)
Exploration of the relationships among acidic deposition, land use, and water chemistry, 11:30578 (R;US)
Fixation of waste materials in grouts. Part II. An empirical equation for estimating compressive strength for grouts from different wastes, 11:29409 (R;US)
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Future directions in intermediate energy heavy ion physics. A proposed expansion of the Holifield Facility, 11:30411 (R;US)
Glove box operations for transplutonium element production, 11:30336 (R;US)
Hazardous Waste Remedial Actions Program: integrating waste management, 11:29445 (R;US)
Head-end and solvent extraction studies using fast-flux test facility fuel, 11:29292 (R;US)
Historical summary of the heavy-section steel technology program and some related activities in light-water reactor pressure vessel safety research, 11:29859 (R;US)
ICRF heating technology development activities at Oak Ridge National Laboratory, 11:31026 (R;US)
ICRH coupling in DIII-D, 11:31028 (R;US)
Improvements in release probability by using an overpack, 11:29298 (R;US)
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures, 11:30090 (R;US)
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb ferritic steel, 11:30087 (R;US)
Light emission from metal-insulator-metal structures biased near breakdown voltages, 11:30393 (R;US)
Local transport of vertically- and horizontally-emitted sodium oxide aerosols, 11:29778 (R;US)
Magnetic susceptibility of CfN, CfAs, and CfSb, 11:30190 (R;US)
Maintainability features of the compact ignition tokamak, 11:31031 (R;US)
Nuclear plant aging research program activities, 11:29833 (R;US)
Nuclear Safety: technical progress review, April-June 1986. Volume 27, No. 2 , 11:29866 (R;US)
Nucleon-meson cascade calculations by Monte Carlo methods, 11:30946 (R;US)
Photosynthetic water splitting. Annual report, March 1, 1985-February 28, 1986, 11:29546 (R;US)
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)
Pressurized thermal shock evaluation of the Calvert Cliffs Unit 1 Nuclear Power Plant, 11:29774 (R;US)
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
Proposed production of a large (~40μg) sample of ^{254}Es, 11:30308 (R;US)
Pulsatile fluidic pump demonstration and predictive model application, 11:29295 (R;US)
PWR hybrid computer model for assessing the safety implications of control systems, 11:29858 (R;US)
Radiation-induced segregation in light-ion bombarded Ni-8% Si, 11:30088 (R;US)
Reduction of plutonium(IV) using photochemically generated uranium(IV), 11:30313 (R;US)
Report brief. Category: evaluation and modeling, 11:30015 (R;US)
Resonantly enhanced third-harmonic generation and multiphoton ionization in cesium vapor, 11:30811 (R;US)
Respiratory Protection Program. Programmatic description, 11:30737 (R;US)
Science, technology, and society, 11:30735 (R;US)
State and data techniques for control of discontinuous systems, 11:29809 (R;US)
Stirling machines: adiabatic to isothermal, 11:30048 (R;US)
Subcriticality measurements for two coupled uranyl nitrate solution tanks using ^{252}Cf-source-driven neutron noise analysis methods, 11:30335 (R;US)
Synthesis and biological evaluation of (E)-19-iodo-3,3-dimethyl-18-nonadecenoic acid, a new dimethyl-branched long-chain fatty acid to evaluate regional myocardial fatty acid uptake, 11:30661 (R;US)
System studies of compact ignition tokamaks, 11:31029 (R;US)
Tellurium behavior in containment under light water reactor accident conditions, 11:29856 (R;US)
TSORT - an automated tool for allocating tasks to training strategies, 11:29791 (R;US)
US DOT Specification 6M radioactive fissile material package nuclear criticality safety re-evaluation, 11:30334 (R;US)
Use of high-pressure ion exchange for the production of gadolinium-153. Status report, 11:30314 (R;US)
Vanadium alloys for fusion reactor first wall application, 11:30089 (R;US)
Version of ORIGEN2 with automated sensitivity-calculation capability, 11:29398 (R;US)

Oak Ridge Y-12 Plant, TN (USA)
Computer simulation of quenching uranium-0.75% titanium penetrator blanks. Final report for FY 1984, 11:30106 (R;US)

Oesterreichische Akademie der Wissenschaften, Vienna
Muon catalyzed fusion, 11:31077 (R;US)

Ohio State Univ., Columbus (USA). Dept. of Welding Engineering
400 Hz welding transformer gun assembly evaluation. Final report, 11:30394 (R;US)
400 Hz welding transformer gun assembly evaluation. Final report, 11:30395 (R;US)

Oklahoma State Univ., Stillwater (USA). School of Chemical Engineering
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Phase behavior of coal fluids: data for correlation development. Report for the period: November 1, 1985-January 31, 1986, 11:29176 (R;US)

Old Dominion Univ., Norfolk, VA (USA)
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)

Oregon Univ., Eugene (USA). Inst. of Theoretical Physics
Diffractive hard scattering and the SSC, 11:30848 (R;US)

Oregon Univ., Eugene (USA). Solar Monitoring Lab.
Pacific Northwest Solar Radiation Data, 11:29497 (R;US)

Oxford Univ. (UK). Mathematical Inst.
Constrained Lagrangian theory for monopoles, 11:30886 (R;GB)
Gauge theories in loop space, 11:30885 (R;GB)

P

Pacific Northwest Labs., Richland, WA (USA)
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)

Assessment of spent nuclear fuel shipping cask handling capabilities of commercial light water reactors, 11:29304 (R;US)
Biomass thermochemical conversion program. 1985 annual report, 11:29486 (R;US)
BWR spent fuel storage cask performance test. Volume 1. Cask handling experience and decay heat, heat transfer, and shielding data, 11:29303 (R;US)
Design of a mixing system for simulated high-level nuclear waste melter feed slurries, 11:29410 (R;US)
General design of a technical assistance program to help DOE/ prime contractor buyers in doing business with small disadvantaged businesses, 11:31272 (R;US)
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Hanford regulated laundry: inventory control and production improvement study, 11:30344 (R;US)
Hanford site water table changes 1950-1980: data observations and evaluation, 11:30604 (R;US)
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)
Modified hazard ranking system for sites with mixed radioactive and hazardous wastes. User manual, 11:29450 (R;US)
Operating radioactive liquid-fed ceramic melter system, 11:29411 (R;US)
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Recommendations to the NRC on human engineering guidelines for nuclear power plant maintainability, 11:29852 (R;US)
Relevance of biotic pathways to the long-term regulation of nuclear waste disposal. Estimation of radiation dose to man resulting from biotic transport: the BIOPORT/MAXI1 software package. Volume 5, 11:29446 (R;US)
Report to the NRC on guidance for preparing scenarios for emergency preparedness exercises at nuclear generating stations. Draft report for comment, 11:29851 (R;US)
Review of light water reactor regulatory requirements. Identification of regulatory requirements that may have marginal importance to risk. Volume 1, 11:29753 (R;US)
Temperature history for canistered fuel lag storage areas during the loss of cooling air at the receiving and handling building of the MRS Facility, 11:29302 (R;US)
Treatment strategies for transuranic wastes, 11:29412 (R;US)
Value of solar thermal industrial process heat, 11:29601 (R;US)

Paris-6 Univ., 75 (France)
Contribution to the study of superconducting magnets, 11:30339 (R;FR;In French)
High accuracy measurement of the total cross section and of the real part of the scattering amplitude πi p from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
Theoretical and experimental study of modes associated to ion cyclotron heating on TFR, 11:30967 (R;FR;In French)

Paris-6 Univ., 75 (France). Lab. de Physique Nucleaire et de Hautes Energies
High accuracy measurement of the total cross section and of the real part of the scattering amplitude π^+p from 2 to 14 GeV/c, 11:30841 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France)
Automatic measurement of characteristic quantities of nuclear plasma, 11:30968 (R;FR;In French)
Pressure and irradiation effects on transport properties of samarium compounds with instable valence, 11:30155 (R;FR;In French)
Study of some direct reactions at 0° in $^{18}O+^{26}Mg$ and $^{18}O+^{12}C$ systems, 11:30897 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France). Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse
Study of transitional Erbium nuclei (N=86) at very high spin. Highlight of dipolar transitions and medium lifetimes in the continuum, 11:30909 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
Gamma-decay of the 1gsub(9/2) and 2p inner-hole states in ^{111}Sn via the $^{112}Sn(^3He)$ reaction at 32 MeV, 11:30911 (R;FR)
Non-leptonic hyperon decays in the chiral bag model, 11:30865 (R;FR)
Radial injection in the Orsay cryogenic cyclotron project, 11:30408 (R;FR;In French)
Study of some direct reactions at 0° in $^{18}O+^{26}Mg$ and $^{18}O+^{12}C$ systems, 11:30897 (R;FR;In French)

Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
Depolarization effects in a ring equipped with snakes, 11:30421 (R;FR)
DM2 results on hadronic and radiactive J/psi decays, 11:30837 (R;FR)
DM2 results on J/psi decays, 11:30839 (R;FR)
Measurement of the F_2sup(γ) photon structure function at LEP, 11:30874 (R;FR)
New particle searches at e^+e machines, 11:30838 (R;FR)
Search of prompt electrons in the NA14 photoproduction experiment at the CERN, 11:30836 (R;FR;In French)
Selected results on J/psi hadronic decays from DM2 and Mark III, 11:30840 (R;FR)
Some aspects of the physics at LEP with the Delphi detector, 11:30873 (R;FR)
Spin-transparent vertical beam kicker, 11:30420 (R;FR)

Paris-11 Univ., 91 - Orsay (France). Lab. de Physique des Plasmas
Electron energy distributions and excitation rates in high-frequency argon discharges, 11:30977 (R;FR)
S3T working group. Report 1: group aims, 11:30976 (R;FR;In French)

Phillips Petroleum Co., Bartlesville, OK (USA)
Prospects for improved fusion reactors, 11:31074 (R;US)

Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Abt. Mechanik
Problems of large-volume gas flow measurements in the high and low pressure range. Proceedings, 11:29253 (R;DE;In German)

Pickard, Lowe, and Garrick, Inc., Washington, DC (USA)
RISKMAN3: an interactive computer code to assist in the review and quantification of system analyses, 11:29867 (R;US)

Princeton Univ., NJ (USA). Dept. of Chemical Engineering
Model for the flow of particulate matter with application to chutes. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29205 (R;US)

Princeton Univ., NJ (USA). Dept. of Chemistry
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Characterization of the TFTR plasma edge by Langmuir-calorimeter probes, 11:30980 (R;US)
Maintainability features of the compact ignition tokamak, 11:31031 (R;US)
Method for determining fast-alpha-particle confinement in tokamak plasmas using resonant nuclear reactors, 11:30978 (R;US)
Model for electron cooling by radiation losses in plasmas: application to soft x-ray laser development, 11:31078 (R;US)
Numerical determination of the magnetic field line Hamiltonian, 11:31079 (R;US)
Numerical modeling of lower hybrid heating and current drive, 11:30979 (R;US)
Pressure limits of an axisymmetric torus, 11:30981 (R;US)

Punjab Univ., Chandigarh (India). Dept. of Physics
Alpha-clustering in 75 MeV $^{16}O+^{40}Ca$ as a collective mass fragmentation process, 11:30908 (R;XA)

Purdue Research Foundation, Lafayette, IN (USA)
Ink jet printing of silver metallization for photovoltaics. Quarterly technical report, January 1-March 31, 1986, 11:29505 (R;US)

Purdue Univ., Lafayette, IN (USA). Dept. of Chemistry
New mass spectral methods for coal characterization. Final report, July 15, 1982-September 14, 1985, 11:29174 (R;US)
Reactions of metal ions and their clusters in the gas phase using laser ionization: ion cyclotron resonance spectroscopy. Progress report, July 1, 1985-June 30, 1986, 11:30235 (R;US)

Purdue Univ., Lafayette, IN (USA). Lab. of Renewable Resources Engineering
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986, 11:29182 (R;US)

R

Radians Innova AB, Gothenburg (Sweden)
Memorandum - optical radiation danger when using RSV, 11:30730 (TG;US)

Rensselaer Polytechnic Inst., Troy, NY (USA)
Selective transformation of carbonyl ligands to organic molecules. Progress report, September 1, 1983-August 31, 1986, 11:30236 (R;US)

RE/SPEC, Inc., Albuquerque, NM (USA)
Early results from the thermal/structural in situ test series at the WIPP, 11:30751 (R;US)
Expected thermal and hydrothermal environments for waste emplacement holes based on G-tunnel heater experiments, 11:30749 (R;US)

RE/SPEC, Inc., Rapid City, SD (USA)
Comparison between predicted and measured south drift closures at the WIPP using a transient creep model for salt, 11:30752 (R;US)

Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA). Occupational Safety
Cross-index to DOE-prescribed occupational safety codes and standards, 11:30736 (R;US)

Rio de Janeiro Univ. (Brazil). Inst. de Fisica
Excitation function and half-life for the fission isomer sup(240m) Pu from the $^{238}U(\alpha, 2n)$ sup(240m) Pu reaction, 11:30928 (R;BR)

Rockwell International Corp., Canoga Park, CA (USA)
Measurements of $^{10}B(n,He)$ reaction rates in a mockup control rod in ZPPR, 11:29777 (R;US)

Solid state NMR methods for coal science. Progress report, October 1-December 31, 1985, 11:29177 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

ALUMINIUM
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Melting
Electrically conductive containment vessel for molten aluminum, 11:30112 (P;US)
ALUMINIUM 22
Proton Emission Decay
Wide angle measurement of beta-delayed two-proton radioactivity of ^{22}Al, 11:30907 (RA;US)
ALUMINIUM 27 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Neon 20 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Excitation of the Δ resonance in relativistic heavy ion charge exchange reactions, 11:30905 (RA;US)
Oxygen 16 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
ALUMINIUM 28 TARGET
Photonuclear Reactions
Pion photoproduction in nuclei, 11:30892 (R;FR)
ALUMINIUM ALLOYS
Hydridation
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)
ALUMINIUM ARSENIDE SOLAR CELLS
Chemical Vapor Deposition
Experience with OMCVD production of GaAs solar cells, 11:29528 (RA;US)
Efficiency
Evaluation of AlsubxGasub1-xsubAs solar cells, 11:29522 (RA;US)
High-efficiency AlGaAs-GaAs Cassegrainian concentrator cells, 11:29521 (RA;US)
Fabrication
Evaluation of AlsubxGasub1-xsubAs solar cells, 11:29522 (RA;US)
Performance Testing
Mechanically-stacked multijunction solar cells, 11:29555 (BA;US)
Physical Radiation Effects
DLTS analysis of radiation-induced defects in one-MeV electron irradiated germanium and Alsub0.17Gasub0.83As solar cells, 11:29534 (RA;US)
Reflectivity
Optical effects of thin film adhesives in multijunction solar cells, 11:29549 (BA;US)
ALUMINIUM ARSENIDES
Carrier Lifetime
Comparison of Auger recombination in GaInAs-AlInAs multiple quantum well structure and in bulk GaInAs, 11:30156 (RA;AT)
Chlorination
Thermal and ion-assisted reactions of Al/sub 0.3/Ga/sub 0.7/As with molecular chlorine, 11:30161 (R;US)
Electronic Structure
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Impurities
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Photoconductivity
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Scattering
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
ALUMINIUM BORIDES
Fabrication
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)
Microstructure
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)
ALUMINIUM CARBIDES
Fabrication
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)
Microstructure
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)
ALUMINIUM CHLORIDES
Cations
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Electron Transfer
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Radicals
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
ALUMINIUM OXIDES
See also HOLLANDITE
SPINELS
Breeding Ratio
Thermochemical comparison of the effectiveness of protium purging of fusion breeders, 11:31142 (J;US)
Catalytic Effects
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Supported f-element complexes: surface chemistry and catalysis. Final report, August 15, 1984-January 14, 1986, 11:30195 (R;US)
Electrochemical Corrosion
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Impurities
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
Mechanical Properties
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Performance Testing
Rapid testing of beta alumina ceramics, 11:29893 (RA;US)

Physical Radiation Effects
Nuclear responses in INTOR plasma stabilization elements, 11:31135 (J;US)
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Porosity
Tritium breeding material : o $LiAlO_2$, 11:31160 (J;US)
Production
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
Purification
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
Reviews
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Sorptive Properties
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
Temperature Effects
Nuclear responses in INTOR plasma stabilization elements, 11:31135 (J;US)
Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiAlO_2$ solid breeders with and without irradiation effects, 11:31255 (J;US)

AMMONIA
Adsorption
Field study of a combined NH_3-SO_2 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:29701 (RA;US)
Aerial Monitoring
Aircraft and ground measurements of ammonia in Kentucky, 11:30547 (J;GB)
Chemical Reaction Kinetics
Kinetics of the reaction OH + NH_3, 11:30208 (J;US)
Rate constant for the reaction H + NH_3 over the temperature range 750-1777 K, 11:30209 (J;US)
Ecological Concentration
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
Inventories
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Ion Exchange
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Monitoring
Aircraft and ground measurements of ammonia in Kentucky, 11:30547 (J;GB)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Pyrolysis
Kinetics of the reaction OH + NH_3, 11:30208 (J;US)
Removal
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Solvent Properties
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, January 1-March 31, 1986, 11:29161 (R;US)

AMMONIUM COMPLEXES
Comparative Evaluations
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)

AMMONIUM COMPOUNDS
Ecological Concentration
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
Excretion
Nitrogen regeneration by the subtropical marine copepod Eucalanus pileatus, 11:30657 (J;GB)

AMORPHOUS STATE
Crystal Structure
Nuclear magnetic resonance studies of amorphous silicon hydrides: proton spin dynamics, 11:30223 (D;US)
AMYLUM
See STARCH
ANADROMOUS FISHES

Sputtering
Surface effects on sputtered atoms and their angular and energy dependence, 11:31252 (J;US)
ATOMIC WEAPONS
See NUCLEAR WEAPONS
ATOM-MOLECULE COLLISIONS
Integral Cross Sections
$F + H_2$ potential energy surface: the ecstasy and the agony, 11:30215 (J;US)
ATP-ASE
Code numbers 3.6.1.3 and 3.6.1.8.
Enzyme Activity
Enzymatic assay for calmodulins based on plant NAD kinase activity, 11:30640 (J;US)
ATR REACTOR
Radioactive Waste Processing
Radwaste processing at the Advanced Test Reactor facility, 11:29811 (RA;US)
AUFWUCHS
Productivity
Estimates of periphyton mass and stream bottom area using phosphorous-32, 11:30607 (J;GB)
AURORA FACILITY
Krypton Fluoride Lasers
Design optimization of single-main-amplifier KrF laser-fusion systems, 11:31230 (J;US)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Chemical Composition
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Corrosion
Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium, 11:31037 (RA;US)
Irradiation Procedures
US/Japan collaborative testing program in HFIR and ORR: specimen matrices for HFIR irradiation, 11:31050 (RA;US)
Microstructure
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Microstructural examination of several commercial alloys neutron irradiated to 100 dpa, 11:31034 (RA;US)
Physical Radiation Effects
Assessment of helium effects on swelling by reirradiation in FFTF of Path A alloys previously irradiated in HFIR, 11:31048 (RA;US)
Irradiation experiments for the US/Japan collaborative testing program in HFIR and ORR, 11:31052 (RA;US)
Microstructural examination of several commercial alloys neutron irradiated to 100 dpa, 11:31034 (RA;US)
Reirradiation in FFTF of swelling-resistant Path A alloys previously irradiated in HFIR, 11:31047 (RA;US)
Swelling behavior of titanium-modified alloys in EBR-II, 11:31054 (RA;US)
Swelling of Fe-Cr-Mn ternary alloys in FFTF, 11:31055 (RA;US)

Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Oil Shale Deposits
Marketable transport fuels from Julia Creek shale oil, 11:29273 (BA;US)
Review of oil shale research in Australia, 11:29939 (BA;US)
AUSTRIA
Forests
Comparison of the methods of survey adopted in the Federal Republic of Germany and Austria, 11:30713 (RA;DE;In German)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES STANDARDS
AUTOMOBILES
Diesel Engines
Advanced adiabatic diesel engine for passenger cars, 11:30045 (B;US)
Internal Combustion Engines
Patterns of vehicle misfueling in 1981 and 1982: where, when, what vehicles, and how often?, 11:30044 (B;US)
AUTOMOTIVE FUELS
Chemical Preparation
Marketable transport fuels from Julia Creek shale oil, 11:29273 (BA;US)
AVIATION FUELS
Chemical Preparation
Marketable transport fuels from Julia Creek shale oil, 11:29273 (BA;US)

B

B MESONS
Lifetime
Lifetime measurements of hadrons containing heavy quarks at PETRA and PEP, 11:30843 (R;GB)
BACKGROUND RADIATION
Compton Effect
Sunyaev-Zeldovich effect at 1.15 mm wavelength, 11:30802 (RA;GB)
BACTERIA
See also ESCHERICHIA COLI
METHANOGENIC BACTERIA

Growth
Microbial biosurfactant - physiology, biochemistry, and applications, 11:29247 (J;US)
BAGHOUSES
Design
Design and operation of the baghouse at Holcomb Station, Unit No. 1, 11:29732 (RA;US)
Economics
Air pollution control: maintenance cost savings from the washing, patching and reuse of bags used in fabric filters, 11:30406 (RA;US)
Comparison of dry injection systems at normal and high flue gas temperatures, 11:29195 (RA;US)
Operation
Design and operation of the baghouse at Holcomb Station, Unit No. 1, 11:29732 (RA;US)
Performance Testing
Spray dryer/baghouse experiences on a 1000 ACFM pilot plant, 11:29731 (RA;US)
BALLISTIC MISSILE DEFENSE
Feasibility Studies
Simple ballistic-missile-defense model to help decision makers, 11:30517 (J;US)
BANKS
See COMMERCIAL BUILDINGS
BARIUM
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
BARIUM FLUORIDES
Materials Testing
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
Physical Radiation Effects
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
Radiation damage test of barium fluoride scintillator, 11:30495 (J;NL)
BASALT
Sorptive Properties
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Stresses
State of in situ stresses determined by hydraulic fracturing at the Hanford Site, 11:29415 (R;US)
BASOPHILS
Receptors
Test of a theory relating to the cross-linking of IgE antibody on the surface of human basophils, 11:30626 (J;US)
BATTELLE PACIFIC NORTHWEST LABORATORIES
Research Programs
Research on geothermal chemistry and advanced instrumentation, 11:29628 (RA;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)

BEAM DUMPS
Design
Active beam dump module design for MFTF-B, 11:31206 (J;US)
BEAM DYNAMICS
Hamiltonians
Introduction to the nonlinear dynamics arising from magnetic multipoles, 11:30412 (R;US)
BEAM PROFILES
Computerized Simulation
Modeling of non-Gaussian beamlet profile based on total-beam power loss and transmission, 11:30999 (J;US)
BEAM SEPARATORS
For velocity separation of secondary beams.
Design
Modified 180° separation magnet for DIII-Big Dee neutral beam injectors, 11:31207 (J;US)
BEAM WIDTHS
See BEAM PROFILES
BEAM-PLASMA SYSTEMS
Estimates of maximum trappable ion beam power in plasma channels, 11:30982 (R;US)
BEAMS
See also ION BEAMS
POLARIZED BEAMS
Beam Transport
Modeling of non-Gaussian beamlet profile based on total-beam power loss and transmission, 11:30999 (J;US)
Power Losses
Modeling of non-Gaussian beamlet profile based on total-beam power loss and transmission, 11:30999 (J;US)
BEAUTY PARTICLES
Particle Decay
Heavy flavour photoproduction and decay, 11:30850 (R;US)
Photoproduction
Heavy flavour photoproduction and decay, 11:30850 (R;US)
BEAVER VALLEY-2 REACTOR
Shippingport, Pennsylvania, USA
Radioactive Waste Facilities
Radiation protection features of Beaver Valley, 11:29763 (RA;US)
BELGIUM
Service Sector
Electricity consumption in Belgium's service sector, 11:29956 (RA;US)
BELT CONVEYORS
Weight Indicators
Tennessee Valley Authority coal inventory procedures and observations, 11:29682 (R;US)
BENTONITE
Hydrothermal Alteration
Hydrothermal stability of bentonite-based buffer materials, 11:30149 (R;CA)
Mineralogy
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)
Thermal Conductivity
Thermal properties of clay-based buffer materials for a nuclear fuel waste disposal vault, 11:30147 (R;CA)
BENZENE
Chemical Preparation
Formation of benzene by the pyrolysis of 4-vinylcyclohexene regiospecific formation of anthracenes in the pyrolysis of dibenzosuberones and related systems, 11:30271 (D;US)
In situ study of the hydrogenation of diphenyl ether in the presence of pyrrhotite and H_2S, 11:30257 (J;US)
Chemical Reaction Kinetics
Kinetic study of reactions important in aromatic hydrocarbon combustion. Final report, August 1, 1982-July 31, 1985, 11:30234 (R;US)
Dissociation
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)
Polymerization
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
Pyrolysis
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)
Vulcanization
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
BENZOFURANS
Solubility
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, January 1-March 31, 1986, 11:29161 (R;US)
BENZOPHENONE
Photochemical Reactions
Photoreduction of benzophenone by amino acids, aminopolycarboxylic acids and their metal complexes: a laser-flash-photolysis study, 11:30296 (J;GB)

BENZOPYRENE
Sorptive Properties
Influence of carbonaceous particles on the interaction of coal combustion stack ash with organic matter, 11:29185 (J;US)
BENZOPYRROLES
See INDOLES
BERYLLIUM
Electrorefining
Waste Systems progress report, March 1984-February 1985, 11:29413 (R;US)
Materials Testing
An assessment of radiation effects in beryllium, 11:31249 (J;US)
Mechanical Tests
Thermomechanical testing of beryllium for limiters in ISX-B and jet, 11:31238 (J;US)
Neutron Leakage
Measurements and calculations of the leakage multiplication from hollow beryllium spheres, 11:31154 (J;US)
Physical Radiation Effects
An assessment of radiation effects in beryllium, 11:31249 (J;US)
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)
Service Life
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)
Temperature Effects
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)
Thermomechanical testing of beryllium for limiters in ISX-B and jet, 11:31238 (J;US)
Thermal Fatigue
Thermomechanical testing of beryllium for limiters in ISX-B and jet, 11:31238 (J;US)
BERYLLIUM 9 TARGET
Neutron Reactions
Evaluation of neutron nuclear data of ^{9}Be for JENDL-3, 11:30903 (R;JP)
Neutron nuclear data of ^{9}Be adopted in JENDL-2, 11:30900 (R;JP)
BERYLLIUM BASE ALLOYS
Valence
Bulk and surface valence of $YbBe_{13}$, 11:30111 (J;CH)
BERYLLIUM MODERATORS
See BERYLLIUM
BGO DETECTORS
Materials Testing
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
Performance
Examination of the role of detection systems in quantitation and image quality in PET, 11:30439 (J;US)
Physical Radiation Effects
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
BINARY-FLUID SYSTEMS
Performance Testing
Heber binary project, 11:29627 (RA;US)
BIOCONVERSION
Coordinated Research Programs
Anaerobic digestion and biocatalysis, 11:29485 (R;GB)
United Kingdom
Anaerobic digestion and biocatalysis, 11:29485 (R;GB)
USA
Anaerobic digestion and biocatalysis, 11:29485 (R;GB)
BIOGAS
See METHANE
BIOGAS PROCESS
Technology Utilization
Critical evaluation of anaerobic fermentation of waste products 'a management study', 11:29484 (R;FR)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL STRESS
Biological Effects
Movement of abecisic acid into the apoplast in response to water stress in Xanthium strumarium L., 11:30678 (J;US)
Remote Sensing
Vegetational stress detection in a southeastern swamp floodplain using remote sensing and in-situ spectral measurements, 11:30620 (R;US)
BIOMASS
Production
Fertilization with peat and wood ashes - effects on biomass production, nutrient balance and uptake of heavy metals, 11:29547 (R;SE;In Swedish)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Community biogas programmes of Gram Vikas, 11:29472 (RA;DE)
Possibilities and limits of community biogas plants in the frame work of biogas propagation strategy in Viet Nam, 11:29477 (RA;DE)
Socio-economic impacts of community biogas plants in Nepal, 11:29474 (RA;DE)
Some thoughts on the Community Biogas Plants, 11:29473 (RA;DE)
Comparative Evaluations
MINO feasibility study. Concluding report (Pilot plant for gasification of peat and wood), 11:29153 (R;SE)
Demonstration Plants
Development of biogas technology in Ethiopia, 11:29471 (RA;DE)
Economics
Model as an instrument for determining the optimal layout of biogas plants with regard to technical and economical aspects, 11:29483 (RA;DE)
Feasibility Studies
Biogas supply for the fictitious village of Kama in India. Case study, 11:29462 (RA;DE)
Pilot experiment for cooperative community biogas facilities in rural Egypt indicated social failure, 11:29470 (RA;DE)
Variants of biogas supply for the fictitious village of 'Rima', South East Asia, (threshold country). Case study, 11:29463 (RA;DE)
Functional Models
Model as an instrument for determining the optimal layout of biogas plants with regard to technical and economical aspects, 11:29483 (RA;DE)
Meetings
Biogas workshop on community plants. Report, 11:29461 (R;DE)
Operation
Experiences with a low temperature biogas plant, 11:29479 (RA;DE)
Planning
Model as an instrument for determining the optimal layout of biogas plants with regard to technical and economical aspects, 11:29483 (RA;DE)
Research Programs
Pilot experiment for cooperative community biogas facilities in rural Egypt indicated social failure, 11:29470 (RA;DE)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
HgI2 Semiconductor Detectors
Mercuric iodide X-ray camera, 11:30667 (J;US)
Image Processing
3D reconstruction for diverging X-ray beams, 11:30660 (R;FR)
Li-Drifted Si Detectors
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)
Position Sensitive Detectors
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)
X-Ray Equipment
Mercuric iodide X-ray camera, 11:30667 (J;US)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Design
Experiences on handling liquid substrates of high solid content in agricultural biogas-plants, 11:29481 (RA;DE)

FAL-biogas R/D project, 11:29482 (RA;DE)
Performance Testing
FAL-biogas R/D project, 11:29482 (RA;DE)
Sealing Materials
Sealing biogas plants with flexible plastic covers. Experiences gained with a German digester, 11:29478 (RA;DE)
BIPYRIDINES
Cations
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_5$-rich media, 11:30244 (J;US)
Electrochemistry
Pyridinium quenchers of $Ru(bpy)_3^{2+}$ charge effects of the yield of electron transfer, 11:30291 (J;US)
Electron Transfer
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_5$-rich media, 11:30244 (J;US)
Photolysis
Pyridinium quenchers of $Ru(bpy)_3^{2+}$ charge effects of the yield of electron transfer, 11:30291 (J;US)
Radicals
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2′-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_5$-rich media, 11:30244 (J;US)
Radiolysis
Radiation-induced reactions of polymer radicals with ruthenium tris(bipyridyl)-OH adducts in aqueous solutions, 11:30252 (J;US)
BIRDS
Habitat
Feasibility study of wood stork foraging habitat mapping using landsat multispectral data, 11:30595 (R;US)
Populations
Forty-fourth breeding bird census, 11:30575 (J;US)
BISMUTH
Chemical Reactions
Reactions of chlorine with liquid metals. 3. Bismuth, 11:30199 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
BISMUTH GERMANATE DETECTORS
See BGO DETECTORS
BISMUTH GERMANATES
Materials Testing
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
Physical Radiation Effects
Radiation damage studies on BaF_2 and BGO scintillator materials, 11:30472 (J;US)
BITTER SPAR
See DOLOMITE
BITUMINOUS COAL
Ash Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Development and demonstration of a static tube flotation system for producing superclean coal. Technical progress report, 2nd quarterly (ending March 31, 1986), 11:29208 (R;US)
Chemical Composition
Development and demonstration of a static tube flotation system for producing superclean coal. Technical progress report, 2nd quarterly (ending March 31, 1986), 11:29208 (R;US)
Comminution
Physical coal beneficiation and electricity costs, 11:29210 (R;GB)
Depolymerization
Improved coal conversion in CO/water systems. Quarterly report No. 5, September 4, 1985-December 3, 1985, 11:29163 (R;US)
Linkages and aromatic clusters in a bituminous coal. Quarterly technical progress report No. 2, December 1, 1985-February 28, 1986, 11:29184 (R;US)
Flotation
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Development and demonstration of a static tube flotation system for producing superclean coal. Technical progress report, 2nd quarterly (ending March 31, 1986), 11:29208 (R;US)
Grinding
Development and demonstration of a static tube flotation system for producing superclean coal. Technical progress report, 2nd quarterly (ending March 31, 1986), 11:29208 (R;US)
Infrared Spectra
Linkages and aromatic clusters in a bituminous coal. Quarterly technical progress report No. 2, December 1, 1985-February 28, 1986, 11:29184 (R;US)
Particle Size
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Solvent Extraction
Linkages and aromatic clusters in a bituminous coal. Quarterly technical progress report No. 2, December 1, 1985-February 28, 1986, 11:29184 (R;US)
Sorptive Properties
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Structural Chemical Analysis
Linkages and aromatic clusters in a bituminous coal. Quarterly technical progress report No. 2, December 1, 1985-February 28, 1986, 11:29184 (R;US)
Sulfur Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Development and demonstration of a static tube flotation system for producing superclean coal. Technical progress report, 2nd quarterly (ending March 31, 1986), 11:29208 (R;US)
Surface Area
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Washing
Physical coal beneficiation and electricity costs, 11:29210 (R;GB)
BL LACERTAE OBJECTS
Cosmic Ray Flux
Blazars, quasars and starbursts, 11:30800 (RA;GB)
BLACK COAL
See also BITUMINOUS COAL
Feasibility Studies
Analyzing the applicability of black coal in public buildings of the Ruhr District, 11:30012 (R;DE;In German)
Federal Republic of Germany
Analyzing the applicability of black coal in public buildings of the Ruhr District, 11:30012 (R;DE;In German)
BLACK HOLES
Space-Time
Spin-3/2 fields on black hole spacetimes, 11:30807 (R;AT)
Spinor Fields
Spin-3/2 fields on black hole spacetimes, 11:30807 (R;AT)
BLACK SHALES
Petrosix Process

Uncertainties in prediction of tritium breeding in candidate blanket designs due to present uncertainties in nuclear data base, 11:31087 (J;US)

Energy Absorption
Energy deposition and shielding requirements for all concepts of the Blanket Comparison and Selection Study, 11:31094 (J;US)

Failure Mode Analysis
Solid breeder/structure mechanical interaction and thermal stability, 11:31137 (J;US)

Fluid Mechanics
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)

Fluid-Structure Interactions
Safety considerations of lithium lead alloy as a fusion reactor breeding material, 11:31239 (J;US)

Heat Transfer
Thermal-hydraulic thermomechanical testing of solid breeder blanket modules using microwave energy, 11:31146 (J;US)

Hydraulics
Thermal-hydraulic thermomechanical testing of solid breeder blanket modules using microwave energy, 11:31146 (J;US)

Leakage Current
The influence of leakage currents on MHD pressure drop, 11:31113 (J;US)

Magnetohydrodynamics
Experimental facility for studying MHD effects in liquid metal cooled blankets, 11:31110 (J;US)
Magnetohydrodynamic considerations for the design of self-cooled liquid-metal fusion reactor blankets, 11:31111 (J;US)
MHD flow control as a design approach for self-cooled liquid-metal blankets of magnetic confinement fusion reactors, 11:31112 (J;US)
The influence of leakage currents on MHD pressure drop, 11:31113 (J;US)

Materials Testing
A module for testing a lithium cooled tokamak blanket in a tandem mirror test reactor, 11:31152 (J;US)
Design of self-cooled, liquid-metal blankets for tokamak and tandem mirror reactors, 11:31105 (J;US)
Modeling of tritium transport in lithium aluminate fusion solid breeders, 11:31141 (J;US)
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Structural materials data base assessment for the Blanket Comparison and Selection Study, 11:31100 (J;US)
Test requirements for solid breeder blanket thermal behavior, 11:31134 (J;US)
Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiAlO_2$ solid breeders with and without irradiation effects, 11:31255 (J;US)
Thermal-hydraulic thermomechanical testing of solid breeder blanket modules using microwave energy, 11:31146 (J;US)

Mechanical Properties
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)

Microwave Heating
Thermal-hydraulic thermomechanical testing of solid breeder blanket modules using microwave energy, 11:31146 (J;US)

Neutron Flux
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)

Neutron Transport
A comparative multidimensional nuclear analysis of candidate blanket designs for Tokamak and tandem mirror reactor concepts, 11:31095 (J;US)

Performance
A comparative multidimensional nuclear analysis of candidate blanket designs for Tokamak and tandem mirror reactor concepts, 11:31095 (J;US)
Nuclear performance optimization of the Be/Li/Th blanket for the fusion breeder, 11:31133 (J;US)

Performance Testing
A module for testing a lithium cooled tokamak blanket in a tandem mirror test reactor, 11:31152 (J;US)

Physical Radiation Effects
Energy deposition and shielding requirements for all concepts of the Blanket Comparison and Selection Study, 11:31094 (J;US)
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)

Porosity
Tritium breeding material : o $LiAlO_2$, 11:31160 (J;US)

Radioactivation
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)

Research Programs
U.S. Blanket Technology Programs, 11:31132 (J;US)

Reviews
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
U.S. Blanket Technology Programs, 11:31132 (J;US)

Shielding
Energy deposition and shielding requirements for all concepts of the Blanket Comparison and Selection Study, 11:31094 (J;US)

Stress Analysis
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)

Temperature Effects
Solid breeder/structure mechanical interaction and thermal stability, 11:31137 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)

Thickness
Blanket optimization studies for cascade, 11:31162 (J;US)

Tritium Recovery
Counter current extraction system for tritium recovery from 17Li-83Pb, 11:31144 (J;US)

Vortex Flow
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)

BREEDING PELLETS

Fluid Mechanics
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)

Neutron Leakage
Measurements and calculations of the leakage multiplication from hollow beryllium spheres, 11:31154 (J;US)

Vortex Flow
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)

BRINES

Research Programs
Brine injection studies, 11:29912 (RA;US)
Geothermal research at the Puna Facility. Technical report, 11:29642 (R;US)

BRIQUETS

Drying
Pilot study in producing briquettes from peat, 11:29212 (R;SE;In Swedish)

BROMIDES

Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Mineral Cycling
Organic carbon-14 in the Amazon River system, 11:30605 (J;US)
CARBON 11
Radiochemistry
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
CARBON 12 REACTIONS
Total Cross Sections
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
CARBON 12 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Neon 20 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)

Oxygen 18 Reactions
Study of some direct reactions at 0° in $^{18}O+^{26}Mg$ and $^{18}O+^{13}C$ systems, 11:30897 (R;FR;In French)
Photonuclear Reactions
Pion photoproduction in nuclei, 11:30892 (R;FR)
CARBON 14
Dose Rates
Calculation of dose rates from critical radionuclides in low-level radioactive waste disposal, 11:29444 (RA;US)
CARBON 14 TARGET
Proton Reactions
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)
CARBON BLACK
Sorptive Properties
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Surface Area
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)
CARBON COMPOUNDS
See also CARBON SULFIDES
Chemical Preparation
Reactivity of large carbon clusters: spheroidal carbon shells and their possible relevance to the formation and morphology of soot, 11:30248 (J;US)
Chemical Reactions
Theoretical studies of the energetics and mechanisms of chemical reactions: abstraction reactions, 11:30206 (J;US)
Molecular Structure
Reactivity of large carbon clusters: spheroidal carbon shells and their possible relevance to the formation and morphology of soot, 11:30248 (J;US)
CARBON DIOXIDE
Adsorption
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Separation of a five-component gas mixture by pressure swing adsorption, 11:30183 (J;US)
Adsorption Isotherms
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Air Pollution Control
Alkaline scrubbing of in situ oil shale retort offgas at Geokinetics, 11:29279 (BA;US)
Biological Effects
Stomatal responses to CO_2 in Paphiopedilum and Phragmipedium: role of the guard cell chloroplast, 11:30681 (J;US)
Chemical Preparation
Enhanced photoredox chemistry in quantized semiconductor colloids, 11:30289 (J;US)
Compressibility
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Density
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Ecological Concentration
Climatic change and the broad-scale distribution of terrestrial ecosystem complexes, 11:30572 (J;NL)
Ion Exchange
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Phase Diagrams
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Phase Studies
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Reduction
Reduction of carbon dioxide by tris(2,2'-bipyridine) cobalt(I), 11:30225 (J;NL)
Removal
Alkaline scrubbing of in situ oil shale retort offgas at Geokinetics, 11:29279 (BA;US)
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Solubility
Phase behavior of coal fluids: data for correlation development. Report for the period: November 1, 1985-January 31, 1986, 11:29176 (R;US)
Solvent Properties
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, January 1-March 31, 1986, 11:29161 (R;US)
Thermal Diffusion
Mound activities in chemical and physical research: July-December 1985, 11:30196 (R;US)
CARBON DIOXIDE FIXATION
Temperature Dependence
Temperature dependence of carbon isotope fractionation in CAM plants, 11:30677 (J;US)
CARBON DIOXIDE INJECTION
Additives
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Bench-Scale Experiments
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Comparative Evaluations
Evaluation of the Little Knife CO_2 minitest, 11:29233 (R;US)
Field Tests
Evaluation of the Little Knife CO_2 minitest, 11:29233 (R;US)
Phase Studies
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
CARBON FIBERS
Physical Radiation Effects
Effects of high energy radiation on the mechanical properties of epoxy-graphite fiber reinforced composites. Interim report, 1 January- 31 December 1985, 11:30145 (R;US)
CARBON MONOXIDE
Adsorption
Separation of a five-component gas mixture by pressure swing adsorption, 11:30183 (J;US)
Chemical Preparation
Gas evolution oscillators. 6. Quantitative characterization of an experimental system, 11:30262 (J;US)
Preparation of the first molecular carbon monoxide complex of uranium, $(Me_3SiC_5H_4)_3UCO$, 11:30317 (J;US)
Chemical Reaction Kinetics
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)
Chemical Reaction Yield
Gas evolution oscillators. 6. Quantitative characterization of an experimental system, 11:30262 (J;US)
Combustion
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)
Crystal Structure
Preparation of the first molecular carbon monoxide complex of uranium, $(Me_3SiC_5H_4)_3UCO$, 11:30317 (J;US)
Oxidation
Kinetics of CO oxidation over Ru(0001), 11:30201 (J;US)
CARBON STEELS
See also STEEL-ASTM-A533-B
Corrosion
Extended storage of low-level radioactive waste: potential problem areas, 11:30079 (RA;US)

Radiation Effects
Extended storage of low-level radioactive waste: potential problem areas, 11:30079 (RA;US)

CARBON SULFIDES
Chemical Reactions
Chemiluminescence of CS_2i initiated by a thermal energy charge-transfer reaction with Ar^+, 11:30212 (J;US)
Chemiluminescence
Chemiluminescence of CS_2^+ initiated by a thermal energy charge-transfer reaction with Ar^+, 11:30212 (J;US)

CARBON TETRACHLORIDE
Electron-Molecule Collisions
S-wave threshold in electron attachment - observations and cross sections in CCl4 and SF6 at ultralow electron energies, 11:30818 (J;US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Binding Energy
Comparison of thionitrosyl and nitrosyl bonding in dicarbonyl(eta^5-cyclopentadienyl)chromium complexes by gas-phase ultraviolet and x-ray photoelectron spectroscopy, 11:30266 (J;US)
Chemical Preparation
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+\text{-}CH_3N(PF_2)_2]_2(\mu\text{-}PF_2)(\mu\text{-}Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Chemical Reactions
Selective transformation of carbonyl ligands to organic molecules. Progress report, September 1, 1983-August 31, 1986, 11:30236 (R;US)
Crystal Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+\text{-}CH_3N(PF_2)_2]_2(\mu\text{-}PF_2)(\mu\text{-}Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Molecular Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+\text{-}CH_3N(PF_2)_2]_2(\mu\text{-}PF_2)(\mu\text{-}Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Powders
Zero-field NMR of solid bis(μ-hydrido)decacarbonyltriosmium, 11:30203 (J;US)

CARBOXYLASE
Biochemistry
Reduced apparent photorespiration by the C_3-C_4 intermediate species, Moricandia arvensis and Panicum milioides, 11:30633 (J;US)
Enzyme Activity
2-(4-bromoacetamido)anilino-2-deoxypentitol 1,5-bisphosphate, a new affinity label for ribulose bisphosphate carboxylase/oxygenase from Rhodospirillum rubrum: determination of reaction parameters and characterization of an active site peptide, 11:30638 (J;US)
Histochemical technique: a general method for quantitative enzyme assays of single cell extracts with a time resolution of seconds and a reading precision of femtomoles, 11:30634 (J;US)
Labelling
2-(4-bromoacetamido)anilino-2-deoxypentitol 1,5-bisphosphate, a new affinity label for ribulose bisphosphate carboxylase/oxygenase from Rhodospirillum rubrum: determination of reaction parameters and characterization of an active site peptide, 11:30638 (J;US)
Radioimmunoassay
Pyruvate, Pi dikinase in bundle sheath strands as well as in mesophyll cells in maize leaves, 11:30669 (J;US)

CARCINOGEN SCREENING
Information Needs
Proceedings: new directions on the extrapolation of health risks from animals to man. Volume 1. Extrapolation from animals to man, 11:30716 (R;US)

CARCINOGENESIS
Biochemistry
Biology Division progress report, October 1, 1984-September 30, 1985, 11:30720 (R;US)
Risk Assessment
Proceedings: new directions on the extrapolation of health risks from animals to man. Volume 2. Toxicokinetics, 11:30717 (R;US)

CARIBOU
See DEER

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASCADE REACTORS
Brayton Cycle
High efficiency heat transport and power conversion system for cascade, 11:31216 (J;US)
Breeding Blankets
Blanket optimization studies for cascade, 11:31162 (J;US)
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)
Breeding Pellets
Flow characteristics of the Cascade granular blanket, 11:31159 (J;US)
Design
Development of the cascade inertial-confinement-fusion reactor, 11:31226 (J;US)
Energy Efficiency
High efficiency heat transport and power conversion system for cascade, 11:31216 (J;US)
Heat Transfer
High efficiency heat transport and power conversion system for cascade, 11:31216 (J;US)
Inertial Confinement
Development of the cascade inertial-confinement-fusion reactor, 11:31226 (J;US)
Performance
Development of the cascade inertial-confinement-fusion reactor, 11:31226 (J;US)
Rankine Cycle
High efficiency heat transport and power conversion system for cascade, 11:31216 (J;US)

CASCADES (NUCLEAR)
See NUCLEAR CASCADES

CASINGS (WELL)
See WELL CASINGS

CASKS
See also SPENT FUEL CASKS
Criticality
US DOT Specification 6M radioactive fissile material package nuclear criticality safety re-evaluation, 11:30334 (R;US)
Design
Failure assessment techniques to ensure shipping container integrity, 11:30347 (R;US)
Failure Mode Analysis
Failure assessment techniques to ensure shipping container integrity, 11:30347 (R;US)
Impact Tests
Target hardness comparison to IAEA unyielding target, 11:30349 (R;US)
Performance Testing
Testing of the DHLW truck shipping cask, 11:30350 (R;US)
Remote Handling Equipment
Use of remote systems and automation in radioactive waste shipping and receiving, 11:29306 (R;US)
Specifications
US DOT Specification 6M radioactive fissile material package nuclear criticality safety re-evaluation, 11:30334 (R;US)

CASTING MOLDS
Cooling Systems
Microprocessor controller for mold heating and cooling. Final report, 11:30391 (R;US)

Heating Systems
Microprocessor controller for mold heating and cooling. Final report, 11:30391 (R;US)
CATALYSTS
Corrosion
High-pressure catalytic metal reactor in a simulated solar central receiver, 11:29513 (R;US)
Deactivation
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986 (Shell 324 m catalyst), 11:29162 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
CATHODES
Damage
Microparticles and their effects in vacuum diodes, 11:30398 (J;US)
Materials
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Molecule Collisions
Microparticles and their effects in vacuum diodes, 11:30398 (J;US)
CATION EXCHANGE CAPACITY
See CATIONS
ION EXCHANGE
CATIONS
Chemical Reactions
Chemiluminescence of CS_2I initiated by a thermal energy charge-transfer reaction with Ar^+, 11:30212 (J;US)
Chemiluminescence
Chemiluminescence of CS_2^+ initiated by a thermal energy charge-transfer reaction with Ar^+, 11:30212 (J;US)
Reduction
Surface-enhanced resonance Raman study of the photoreduction of methylviologen on a p-InP semiconductor electrode, 11:30285 (J;US)
CATS
Hemic Diseases
Myeloproliferative disease in a cat, 11:30673 (J;US)
CAVITY RESONATORS
Design
Monochromatic radio frequency accelerating cavity, 11:30403 (P;US)
CCD
See CHARGE-COUPLED DEVICES
CDF
Analog-to-Digital Converters
A large dynamic range charge amplifier ADC for the Fermilab collider detector facility, 11:30468 (J;US)
Array Processors
The Rabbit system: Low cost, high reliability front end electronics featuring 16 bit dynamic range, 11:30447 (J;US)
Data Acquisition Systems
The Rabbit system: Low cost, high reliability front end electronics featuring 16 bit dynamic range, 11:30447 (J;US)
Design
The Collider Detector at Fermilab (CDF), 11:30441 (J;US)
Drift Chambers
Radial wire drift chambers for CDF forward tracking, 11:30454 (J;US)
Fastbus System
A FASTBUS logic analyzer based on SLAC SNOOP diagnostic modules, 11:30464 (J;US)
FASTBUS cooling, 11:30466 (J;US)
FASTBUS rack alarms and limits, 11:30465 (J;US)
The FASTBUS Segment Extension as a crate coupling concept, 11:30463 (J;US)
Position Sensitive Detectors
A silicon vertex detector for CDF, 11:30446 (J;US)
Preamplifiers
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
Pulse Discriminators
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
Pulse Shapers
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
Si Semiconductor Detectors
A silicon vertex detector for CDF, 11:30446 (J;US)
CEA

Compression Strength
Fixation of waste materials in grouts. Part II. An empirical equation for estimating compressive strength for grouts from different wastes, 11:29409 (R;US)
CENTRIFUGE ENRICHMENT PLANTS
Test Facilities
International Atomic Energy Agency UF_6 cascade header pipe test loop: safety assessment, 11:29453 (R;US)
CERAMIC MELTERS
Design
Design of a mixing system for simulated high-level nuclear waste melter feed slurries, 11:29410 (R;US)
Operation
Operating radioactive liquid-fed ceramic melter system, 11:29411 (R;US)
CERAMICS
Absorption Spectroscopy
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Chemical Composition
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Chemical Preparation
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Chemical Vapor Deposition
Development of a new, faster process for the fabrication of ceramic fiber-reinforced ceramic composites by chemical vapor infiltration, 11:30130 (BA;US)
Computerized Tomography
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Corrosion
Corrosion of materials by high-temperature industrial combustion environments: a summary, 11:30124 (R;US)
Elasticity
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

Emissivity
Screening ceramic materials for intense radiant heat applications, 11:30134 (BA;US)
Fabrication
Development of a new, faster process for the fabrication of ceramic fiber-reinforced ceramic composites by chemical vapor infiltration, 11:30130 (BA;US)
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Fastening
Metal-to-ceramic attachment device, 11:30110 (P;US)
Flexural Strength
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Fracture Properties
Silicon carbide whisker reinforced ceramic composites and method for making same, 11:30126 (P;US)
Gravimetric Analysis
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Hot Pressing
Hot isostatic pressing of ceramics, 11:30120 (R;FR;In French)
Silicon carbide whisker reinforced ceramic composites and method for making same, 11:30126 (P;US)
Microwave Heating
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Nondestructive Testing
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Physical Radiation Effects
Materials problems for highly irradiated ICRH Launchers in fusion reactors, 11:31195 (J;US)
Reflectivity
Screening ceramic materials for intense radiant heat applications, 11:30134 (BA;US)
Thermal Diffusion
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Thermal Expansion
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Thermodynamic Properties
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Uses
Screening ceramic materials for intense radiant heat applications, 11:30134 (BA;US)
X-Ray Fluorescence Analysis
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)

CERIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)

CERMETS
Fabrication
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)
Microstructure
Processing and microstructural characterization of B_4C-Al cermets, 11:30132 (BA;US)

CESIUM
Auger Electron Spectroscopy
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Catalytic Effects
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Electron Diffraction
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Films
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Fission Products
Effects of time and other variables on fission product release rates, 11:29748 (R;US)
Harmonic Generation
Resonantly enhanced third-harmonic generation and multiphoton ionization in cesium vapor, 11:30811 (R;US)
Ion Emission
Cesium transpiration through a negative-ion forming electrode, 11:31266 (BA;US)
Ion Exchange
Vitrokele compositions: novel, high affinity, metal selective and regenerable media for the removal of radioactive metals from aqueous nuclear waste streams, 11:29357 (RA;US)
Ionization
Resonantly enhanced third-harmonic generation and multiphoton ionization in cesium vapor, 11:30811 (R;US)
Photoelectron Spectroscopy
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Volatility
Studies of the volatility of cesium and iodine, 11:30189 (RA;US)

CESIUM 137
Ecological Concentration
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Environmental Transport
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Leaching
Loss of weight, ^{60}Co, and ^{137}Cs from tree litter in three subsystems of a watershed, 11:30588 (J;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)
Radioecological Concentration
Behavior of ^{137}Cs-tagged particles in a fescue meadow, 11:30701 (BA;XA)
Uptake
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)
Uptake of waste Sr 90 and Cs 137 by soil and vegetation, 11:30589 (J;US)

CESIUM COMPOUNDS
See also CESIUM FLUORIDES
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)

CESIUM FLUORIDES
Chemical Preparation
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)
Infrared Spectra
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)
Vibrational States
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)

CHALK RIVER NUCLEAR LABS
Intermediate-Level Radioactive Wastes
Transition from storage to permanent disposal of low- and intermediate-level wastes at the Chalk River Nuclear Laboratories, 11:29324 (RA;US)
Low-Level Radioactive Wastes
Transition from storage to permanent disposal of low- and intermediate-level wastes at the Chalk River Nuclear Laboratories, 11:29324 (RA;US)
CHALKS

Gasification
Active sites in char gasification. Quarterly technical progress report, 1 January-31 March 1986 (Lignite char and phenolic resin char), 11:29160 (R;US)
Sorptive Properties
Active sites in char gasification. Quarterly technical progress report, 1 January-31 March 1986 (Lignite char and phenolic resin char), 11:29160 (R;US)
Surface Area
Active sites in char gasification. Quarterly technical progress report, 1 January-31 March 1986 (Lignite char and phenolic resin char), 11:29160 (R;US)
CHEMICAL EXPLOSIONS
Wave Propagation
Gas explosion characterization, wave propagation (small-scale experiments). Vol. 1, 11:30509 (R;FR)
Gas explosion characterization, wave propagation (half-scale experiments). Vol. 2, 11:30510 (R;FR)
CHEMICAL EXPLOSIVES
See also NITROMETHANE
PETN
SHAPED CHARGES
Compression
Frequency shift measurement in shock-compressed materials, 11:30516 (P;US)
Density
Effects of physical properties on the initiation behaviors of heterogeneous high explosives, 11:30512 (R;US)
Detonations
Effects of physical properties on the initiation behaviors of heterogeneous high explosives, 11:30512 (R;US)
Simple blast model for structural design (TATB-based explosive PBX 9502 and HMX-based PBX 9501), 11:30513 (R;US)
Fabrication
Frequency shift measurement in shock-compressed materials, 11:30516 (P;US)
Grain Size
Effects of physical properties on the initiation behaviors of heterogeneous high explosives, 11:30512 (R;US)
Vibrational States
Frequency shift measurement in shock-compressed materials, 11:30516 (P;US)
CHEMICAL INDUSTRY
Energy Consumption
Industrial sector end use. Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume I. Summary of 1976 results. Final report, 11:29947 (R;US)
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume II. Part 2. Documentation of results. Final report, 11:29980 (R;US)
CHEMICAL PLANTS
Modifications
Polyimide scale-up in a new facility, 11:30332 (R;US)
Risk Assessment
Evaluation of criteria for the application of systems-analytical methods for safety analyses of chemical plants, 11:30390 (R;DE;In German)
CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
Research Programs
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)
CHEMICAL REACTORS
See also RETORTS
Construction
High-pressure catalytic metal reactor in a simulated solar central receiver, 11:29513 (R;US)
Design
High-pressure catalytic metal reactor in a simulated solar central receiver, 11:29513 (R;US)
Performance Testing
Synthetic fuel gas from petroleum coke-performance in an industrial gasifier, 11:29238 (BA;US)
CHEMICAL VAPOR DEPOSITION
Technology Transfer
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
CHEMICAL WASTES
Political Aspects
Institutional and technical issues in the management of low-level mixed wastes, 11:29329 (RA;US)
Waste Disposal
Modified hazard ranking system for sites with mixed radioactive and hazardous wastes. User manual, 11:29450 (R;US)
Waste Management
Institutional and technical issues in the management of low-level mixed wastes, 11:29329 (RA;US)
CHEMICALS
See PLASTICIZERS
SURFACTANTS
CHEMISTRY
See also NUCLEAR CHEMISTRY
Meetings
Abstracts of the 26. Brazilian Congress on Chemistry, 11:30179 (R;BR;In Portuguese)
Research Programs
Chemistry research resource. Progress report, March 1986, 11:30175 (R;US)
CHERENKOV COUNTERS
Gain
Further measurements of electron transmission and avalanche gain in narrow lead glass tubing, 11:30461 (J;US)

Performance Testing
Ring imaging Cherenkov detector prototype results for E665 at Fermilab, 11:30456 (J;US)
Projection Spark Chambers
The recent operational performance of the CERN Omega Ring Imaging Cerenkov Detector, 11:30450 (J;US)
Shields
Further measurements of electron transmission and avalanche gain in narrow lead glass tubing, 11:30461 (J;US)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHEST
Phantoms
Tissue-equivalent torso phantom for calibration of transuranic-nuclide counting facilities, 11:30951 (R;US)

CHINA
Biomass Conversion Plants
Attempt of the biogas development and utilization. The introduction of the community biogas digesters and biogas distribution to each family in an agricultural research institute, 11:29468 (RA;DE)
Multiple utilization of the biomass, 11:29466 (RA;DE)
Primary approach to the engineering of centralized biogas supply system in Shanghai outskirts, 11:29467 (RA;DE)
Energy Policy
The history and future of China's oil shale industry, 11:29940 (BA;US)
Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Oil Shale Deposits
The history and future of China's oil shale industry, 11:29940 (BA;US)
Oil Shale Industry
The history and future of China's oil shale industry, 11:29940 (BA;US)

CHINA CLAY
See KAOLIN

CHINESE HAMSTER OVARY CELLS
See CHO CELLS

CHLAMYDOMONAS
Metabolism
Fermentative metabolism of Chlamydomonas reinhardtii. II. Role of plastoquinone, 11:30653 (J;US)
Photochemical Reactions
Long-term endurance and selection studies in hydrogen and oxygen photoproduction by Chlamydomonas reinhardtii, 11:29457 (J;GB)

CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE
SODIUM CARBONATES

CHLORIDES
See also ALUMINIUM CHLORIDES
ANTIMONY CHLORIDES
CALCIUM CHLORIDES
NICKEL CHLORIDES
SILICON CHLORIDES
SODIUM CHLORIDES
STRONTIUM CHLORIDES
Solubility
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)
Thermodynamic Properties
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)

CHLORINATED AROMATIC HYDROCARBONS
Dissociation
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)
Gas Chromatography
Parallel capillary column gas chromatography in the determination of chlorinated pesticides and PCBs, 11:30186 (J;US)
Pyrolysis
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)
Quantitative Chemical Analysis
Parallel capillary column gas chromatography in the determination of chlorinated pesticides and PCBs, 11:30186 (J;US)
Sampling
Field sampling design and method of statistical analysis to define the areal extent of PCB contamination in low-level waste pond sediments, 11:29432 (RA;US)

CHLORINE
Chemical Reactions
Reactions of chlorine with liquid metals. 3. Bismuth, 11:30199 (J;US)
Dissociation
Optoacoustic detection of photodissociation and thermomolecular recombination in Cl_2, 11:30294 (J;US)
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Molecular Beams
Reactions of chlorine with liquid metals. 3. Bismuth, 11:30199 (J;US)
Photochemistry
Optoacoustic detection of photodissociation and thermomolecular recombination in Cl_2, 11:30294 (J;US)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE COMPOUNDS
See also CHLORIDES
CHLORINE OXIDES
PERCHLORATES
Crystal Structure
Structure of trichloro(diethylenetriamine)gold(II), Au(dien)Cl_2, determined by single-crystal x-ray diffraction, Raman, and EXAFS spectroscopies: an EXAFS caveat, 11:30254 (J;US)
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)

CHLORINE LOGS
See NEUTRON-GAMMA LOGGING

CHLORINE OXIDES
Oxidation
Kinetics of one-electron transfer reactions involving ClO_2 and NO_2, 11:30204 (J;US)

CHLOROPHYLL
Absorption Spectroscopy
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)
Complexes
Analysis of photosynthetic antenna function in a mutant of Arabidopsis thaliana (L.) lacking trans-hexadecenoic acid, 11:30630 (J;US)
Emission Spectroscopy
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)

CHLOROPLASTS
Electron Transfer
Similarity of EPR Signal II/sub f/ rise and P-680$^+$ decay kinetics in Tris-washed chloroplast Photosystem II preparations as a function of pH, 11:30643 (J;NL)
Photosynthesis
Similarity of EPR Signal II/sub f/ rise and P-680$^+$ decay kinetics in Tris-washed chloroplast Photosystem II preparations as a function of pH, 11:30643 (J;NL)

CHO CELLS
Chromosomal Aberrations
Assignment of genes encoding metallothioneins I and II to Chinese hamster chromosomes 3. Evidence for the role of chromosome rearrangement in gene amplification, 11:30724 (J;US)

Strand Breaks
Assignment of genes encoding metallothioneins I and II to Chinese hamster chromosomes 3. Evidence for the role of chromosome rearrangement in gene amplification, 11:30724 (J;US)

CHOOZ B-1 REACTOR
See ARDENNES B-1 REACTOR

CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS

CHROMIUM
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Environmental Transport
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)
Root Absorption
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)

CHROMIUM 51
Diffusion
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Isotope Effects
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)

CHROMIUM ALLOYS
See also CHROMIUM STEELS
STAINLESS STEELS
VANSTAR 7
Corrosion
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Hydridation
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)
Materials Testing
Development of ferritic steels for reduced activation: the US program, 11:30081 (R;US)
Physical Radiation Effects
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys, 11:30085 (R;US)
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
Tensile properties of helium-injected V-15Cr-5Ti after irradiation in EBR-II, 11:31059 (RA;US)
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)

CHROMIUM CARBIDES
Friction
Composition optimization of self-lubricating chromium carbide-based composite coatings for use to 760°C, 11:30091 (R;US)

CHROMIUM COMPLEXES
Binding Energy
Comparison of thionitrosyl and nitrosyl bonding in dicarbonyl(eta^5-cyclopentadienyl)chromium complexes by gas-phase ultraviolet and x-ray photoelectron spectroscopy, 11:30266 (J;US)
Chemical Preparation
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Chemical Reaction Kinetics
Kinetics and mechanisms of electron transfer between blue copper proteins and electronically excited chromium and ruthenium polypyridine complexes, 11:30292 (J;US)
Chemical Reactions
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Ion Exchange Chromatography
Determination of Cr(III) in chromic acid. Comparison of spectrophotometric and ion chromatographic methods, 11:30176 (R;US)
Spectrophotometry
Determination of Cr(III) in chromic acid. Comparison of spectrophotometric and ion chromatographic methods, 11:30176 (R;US)

CHROMIUM OXIDES
Crystal Defects
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Fracture Properties
Fracture toughness of $MgCr_2O_4$-ZrO_2 composites, 11:30133 (BA;US)
Self-Diffusion
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)

CHROMIUM STEELS
See also CHROMIUM-MOLYBDENUM STEELS
Phase Studies
Structure and tensile properties of ferro-martensitic alloys hardened by chi phase precipitation, 11:30072 (R;FR;In French)
Structure and tensile properties of ferro-martensitic alloys hardened by chi phase precipitation, 11:30076 (R;FR;In French)
Tensile Properties
Comparison of the tensile properties of 9-12% Cr. steels. (Pt. 1) data files, (Pt. 2) final report, 11:30094 (R;FR)
Structure and tensile properties of ferro-martensitic alloys hardened by chi phase precipitation, 11:30072 (R;FR;In French)
Structure and tensile properties of ferro-martensitic alloys hardened by chi phase precipitation, 11:30076 (R;FR;In French)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Corrosion
Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium, 11:31037 (RA;US)
Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li, 11:31038 (RA;US)
Corrosion Fatigue
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Cracks
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
Embrittlement
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Fracture Mechanics
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
Fracture Properties
Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22}n/cm^2, 11:31060 (RA;US)
Rapid solidification of candidate ferritic steels, 11:31064 (RA;US)
Impact Strength
Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects, 11:31061 (RA;US)
Microstructure
Rapid solidification of candidate ferritic steels, 11:31064 (RA;US)
Physical Radiation Effects
Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22}n/cm^2, 11:31060 (RA;US)
Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects, 11:31061 (RA;US)
FFTF fusion irradiations - FFTF cycles 4-6, 11:31045 (RA;US)
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb ferritic steel, 11:30087 (R;US)
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys (Candidate window materials for SIN beam stop), 11:30099 (R;US)

Reactor Materials
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
CHROMOSOMAL ABERRATIONS
See also SISTER CHROMATID EXCHANGES
Biological Indicators
Use of cytogenetic endpoints in human lymphocytes as indicators of exposure to genotoxicants, 11:30721 (BA;US)

SUBBITUMINOUS COAL
Alkylation
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
Calorific Value
Production of a high-quality liquid fuel from coal by mild pyrolysis of coal-lime mixtures, 11:29158 (R;US)
Chemical Composition
Production of a high-quality liquid fuel from coal by mild pyrolysis of coal-lime mixtures, 11:29158 (R;US)
Coking
Contribution to the study of the mechanisms of coke formation, 11:29165 (R;XE;In French)
Combustion
Air blast type coal slurry fuel injector, 11:29224 (P;US)
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly report, December 1, 1985-February 28, 1986, 11:29217 (R;US)
Modern pulverized coal combustion in Europe, 11:29220 (R;SE)
Study of the conditions of formation and emission of trace element pollutants from the combustion of coal in industrial fires, 11:29199 (R;XE)
Comminution
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
Computerized Tomography
Computed tomography of coals. Quarterly technical progress report No. 8, July 1-September 30, 1984, 11:29156 (R;US)
Consumption Rates
Annual outlook for US coal 1986, with projections to 1995 (USA; to 1995), 11:29226 (R;US)
Electron Spin Resonance
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:29181 (R;US)
Exports
Annual outlook for US coal 1986, with projections to 1995 (USA; to 1995), 11:29226 (R;US)
Fluidized-Bed Combustion
Atmospheric FBC and CFBC - the American approach, 11:29221 (R;SE)
Atmospheric FBC and CFB: the European approach, 11:29222 (R;SE)
Pressurized-fluidized bed combustion (PFBC) - coal power for the future, 11:29223 (R;SE)
Progress in circulating fluidized bed firing for steam generation and use of low value fuels and coals, 11:29218 (R;FR;In German)
Inventories
Tennessee Valley Authority coal inventory procedures and observations, 11:29682 (R;US)
Maritime Transport
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Market
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Mass Spectra
New mass spectral methods for coal characterization. Final report, July 15, 1982-September 14, 1985 (Oxidized coal and coal oxidation products; Tandem MS/MS methodology), 11:29174 (R;US)
Molecular Structure
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:29181 (R;US)
NMR Spectra
Solid state NMR methods for coal science. Progress report, October 1-December 31, 1985, 11:29177 (R;US)
Oxidation
New mass spectral methods for coal characterization. Final report, July 15, 1982-September 14, 1985 (Oxidized coal and

coal oxidation products; Tandem MS/MS methodology), 11:29174 (R;US)

Prices
Annual outlook for US coal 1986, with projections to 1995 (USA; to 1995), 11:29226 (R;US)

Production
Annual outlook for US coal 1986, with projections to 1995 (USA; to 1995), 11:29226 (R;US)

Pyrolysis
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly report, December 1, 1985-February 28, 1986, 11:29217 (R;US)
Production of a high-quality liquid fuel from coal by mild pyrolysis of coal-lime mixtures, 11:29158 (R;US)

Research Programs
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

Solids Flow
Fundamentals of bulk solids flow (369 references), 11:29211 (R;GB)

Solvent Extraction
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986, 11:29182 (R;US)

Stockpiles
Tennessee Valley Authority coal inventory procedures and observations, 11:29682 (R;US)

Structural Chemical Analysis
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986, 11:29182 (R;US)
New mass spectral methods for coal characterization. Final report, July 15, 1982-September 14, 1985 (Oxidized coal and coal oxidation products; Tandem MS/MS methodology), 11:29174 (R;US)
Solid state NMR methods for coal science. Progress report, October 1-December 31, 1985, 11:29177 (R;US)

Supercritical Gas Extraction
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, January 1-March 31, 1986, 11:29161 (R;US)

Swelling
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)

Trade
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)

Washing
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 11:29214 (J;US)

COAL CHEMICALS

Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

Safety
[Great Plains Coal Gasification Associates]. Quarterly technical progress report (Lurgi Process), 11:29155 (R;US)

Start-Up
Great Plains Coal Gasification Plant start-up and modification report (Lurgi Process), 11:29154 (R;US)

Valves
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

COAL INDUSTRY
Energy Consumption
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume IA. Appendices with 1975 data. Final report, 11:29946 (R;US)
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume II. Part 2. Documentation of results. Final report, 11:29980 (R;US)
Forecasting
Annual outlook for US coal 1986, with projections to 1995 (USA; to 1995), 11:29226 (R;US)
COAL LIQUEFACTION
See also SUPERCRITICAL GAS EXTRACTION
Catalysts
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Chemistry
Improved coal conversion in CO/water systems. Quarterly report No. 5, September 4, 1985-December 3, 1985, 11:29163 (R;US)
Organic Solvents
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Temperature Effects
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
COAL LIQUEFACTION PLANTS
Materials
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Materials Testing
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Valves
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
COAL LIQUIDS
Fractionation
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Health Hazards
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)
Hydrogenation
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Mass Spectra
New mass spectral methods for coal characterization. Final report, July 15, 1982-September 14, 1985, 11:29174 (R;US)
Quantitative Chemical Analysis
Chromatographic chemical characterization of solvent refined coal I and II, 11:30725 (J;DE)
Technology Assessment
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Teratogenesis
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)
Toxicity
Chromatographic chemical characterization of solvent refined coal I and II, 11:30725 (J;DE)
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
COAL MINES
Abandoned Sites
Coal industry perspectives on nonpoint source pollution, 11:29191 (RA;US)
Permit Applications
Uncertainties in predicting fugitive dust emissions and concentrations around western surface coal mines, 11:29201 (J;US)
Site Selection
Uncertainties in predicting fugitive dust emissions and concentrations around western surface coal mines, 11:29201 (J;US)
COAL MINING
Abandoned Sites
Factors and treatment of abandoned acid mine lands for controlling nonpoint source pollution, 11:29192 (RA;US)
Environmental Effects
Effect of distance on the preservation value of water quality, 11:29907 (J;US)
COAL PREPARATION
Cost
Physical coal beneficiation and electricity costs, 11:29210 (R;GB)
COAL PREPARATION PLANTS
Materials
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Materials Testing
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
COAL RESERVES
Leasing
Economic assessment of effects of royalties, severance taxes, and diligent development requirements on coal production, prices, and consumer costs. Draft final report, 11:29228 (R;US)
COAL SEAMS
Hydraulic Fracturing
Quasi-static and dynamic arbitrary fracture propagation in jointed rock, 11:29252 (R;US)
COAL TAR OILS
See also NAPHTHA
Inventories
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Turbine Blades
Particle and vapor deposition in coal-fired gas turbines, 11:29669 (R;US)
COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES
COASTAL REGIONS
Atmospheric Circulation
Wind direction meander at a coastal site during onshore flows, 11:30521 (J;US)
COBALT
Absorption Spectroscopy
Determination of cobalt in samples containing cobalt and tungsten carbide by electrothermal atomic absorption spectrometry, 11:30548 (J;US)
Environmental Transport
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)
Ion Exchange
Vitrokele compositions: novel, high affinity, metal selective and regenerable media for the removal of radioactive metals from aqueous nuclear waste streams, 11:29357 (RA;US)
Root Absorption
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)
COBALT 60
Leaching
Loss of weight, ^{60}Co, and ^{137}Cs from tree litter in three subsystems of a watershed, 11:30588 (J;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)

Uptake
Experimental investigation of cobalt-60 accumulation and elimination in Cyprinus carpio (L.), 11:30690 (R;FR;In French)

COBALT ALLOYS
See also COBALT BASE ALLOYS
Corrosion Resistance
Research on erosion and corrosion of cobalt-free materials, 11:30093 (R;FR;In German)

COBALT BASE ALLOYS
Corrosion Resistance
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)
Materials Testing
FY 1984 and FY 1985 geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:29639 (R;US)
Oxidation
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)
Protective Coatings
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)

COBALT COMPLEXES
Chemical Preparation
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Chemical Reactions
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Photochemical Reactions
Photoreduction of benzophenone by amino acids, aminopolycarboxylic acids and their metal complexes: a laser-flash-photolysis study, 11:30296 (J;GB)

COBALT OXIDES
Impurities
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)

COBALT SULFATES
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Comparative Evaluations
Generic studies of advanced fluid bed air heater technology. Topical report Number 6. Costs and economic analyses of the generic fluid bed air heater systems (Including topping combustion, pressurizing, etc.), 11:29216 (R;US)
Control Systems
Electrical control of a cogeneration set in parallel mains operation or in stand-by operation, 11:29480 (RA;DE)
Economic Analysis
Generic studies of advanced fluid bed air heater technology. Topical report Number 6. Costs and economic analyses of the generic fluid bed air heater systems (Including topping combustion, pressurizing, etc.), 11:29216 (R;US)
Electric Utilities
Commercial aspects of CHP and private generation: an Electricity Supply Industry viewpoint, 11:29677 (R;GB)
United Kingdom
Commercial aspects of CHP and private generation: an Electricity Supply Industry viewpoint, 11:29677 (R;GB)

COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY

COILS (MAGNETIC)
See MAGNET COILS

COKE
Gasification
Synthetic fuel gas from petroleum coke-performance in an industrial gasifier, 11:29238 (BA;US)
Texture
Contribution to the study of the mechanisms of coke formation, 11:29165 (R;XE;In French)

COKE OVENS
Computerized Control Systems
Developments in control systems for the thermal regime of batteries and coking of coal, 11:29164 (R;XE;In French)

COLD PLASMA
Plasma Diagnostics
Low-temperature plasma near a tokamak reactor limiter, 11:30987 (J;US)

COLD STORAGE
Feasibility Studies
Attractive economics of thermal storage in new buildings, 11:29976 (RA;US)
Payback Period
Attractive economics of thermal storage in new buildings, 11:29976 (RA;US)

COLLECTRONS
See SELF-POWERED NEUTRON DETECTORS

COLLEGES
See EDUCATIONAL FACILITIES

COLLIDER DETECTOR AT FERMILAB
See CDF

COLLIERIES

COLLISIONAL HEATING
Ion Beam Targets
Collisonal pumping for the production of intense spin-polarized neutral BEAMS: target considerations, 11:31219 (J;US)
Polarized Beams
Collisonal pumping for the production of intense spin-polarized neutral BEAMS: target considerations, 11:31219 (J;US)

COLLISIONAL PLASMA
Wave Propagation
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media, 11:30975 (R;US)

COLLISIONLESS PLASMA
Wave Propagation
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media, 11:30975 (R;US)

COLLOIDS
See also FOAMS
Improving the stability of coal slurries. Quarterly and half-yearly report, September 15-December 15, 1985 and September 15, 1985-March 15, 1986, 11:29206 (R;US)
Optical Properties
Enhanced photoredox chemistry in quantized semiconductor colloids, 11:30289 (J;US)
Photolysis
Photoelectrochemistry in particulate systems. 3. Phototransformations in the colloidal TiO_2-thiocyanate system, 11:30173 (J;US)

COLOMBIA
Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)

COLUMBIA RIVER
Anadromous Fishes
Monitoring of downstream salmon and steelhead at federal hydroelectric facilities. Annual report 1985, 11:29493 (R;US)
Dams
Smolt passage behavior and flow-net relationship in the forebay of John Day Dam. Final report 1985, 11:29494 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Cogeneration
Generic studies of advanced fluid bed air heater technology. Topical report Number 1. Task 1: System configuration (bubbling beds); Task 5: Bed and heat exchanger losses, 11:29215 (R;US)
Comparative Evaluations
Generic studies of advanced fluid bed air heater technology. Topical report Number 1. Task 1: System configuration (bubbling beds); Task 5: Bed and heat exchanger losses, 11:29215 (R;US)
Demonstration Plants
Cool water Integrated Coal Gasification Combined Cycle project: status and results, 11:29680 (R;SE)
Design
Combined cycle process with integrated gasification VEW-Coal Conversion Process, 11:29679 (R;SE)
Generic studies of advanced fluid bed air heater technology. Topical report Number 1. Task 1: System configuration (bubbling beds); Task 5: Bed and heat exchanger losses, 11:29215 (R;US)
Economics
Cool water Integrated Coal Gasification Combined Cycle project: status and results, 11:29680 (R;SE)
Efficiency
Combined cycle process with integrated gasification VEW-Coal Conversion Process, 11:29679 (R;SE)
Cool water Integrated Coal Gasification Combined Cycle project: status and results, 11:29680 (R;SE)
Engineering
Generic studies of advanced fluid bed air heater technology. Topical report Number 1. Task 1: System configuration (bubbling beds); Task 5: Bed and heat exchanger losses, 11:29215 (R;US)
Performance
Generic studies of advanced fluid bed air heater technology. Topical report Number 1. Task 1: System configuration (bubbling beds); Task 5: Bed and heat exchanger losses, 11:29215 (R;US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
Comparative Evaluations
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Correlations
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Environmental Impacts
Modern pulverized coal combustion in Europe, 11:29220 (R;SE)
Mathematical Models
Effect of energy feedback mechanisms on the oxidation rate of pulverized coal. Quarterly report, December 1, 1985-February 28, 1986, 11:29217 (R;US)
Hydrogen:air:steam flammability limits and combustion characteristics at intermediate scale, 11:29861 (R;US)
COMBUSTION CHAMBERS
Cold Pressing
Evaluation of cold isostatic pressing for high pressure thrust chambers, 11:30101 (R;JP)
Computerized Simulation
Basic computer code for industrial burner designs. Part 1: capability test in isothermal swirling flows, 11:30326 (RA;JP)
Design
Basic computer code for industrial burner designs. Part 1: capability test in isothermal swirling flows, 11:30326 (RA;JP)
Performance Testing
Evaluation of cold isostatic pressing for high pressure thrust chambers, 11:30101 (R;JP)
Powder Metallurgy
Evaluation of cold isostatic pressing for high pressure thrust chambers, 11:30101 (R;JP)
COMBUSTION KINETICS
Algorithms
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)
Computerized Simulation
Numerical simulation method for combustion in an oxyhydrogen rocket motor, 11:30281 (RA;JP)
Numerical Solution
Numerical simulation method for combustion in an oxyhydrogen rocket motor, 11:30281 (RA;JP)
Supersonic Flow
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)
COMBUSTION PRODUCTS
Corrosive Effects
Corrosion of materials by high-temperature industrial combustion environments: a summary, 11:30124 (R;US)
Leaching
Study of the conditions of formation and emission of trace element pollutants from the combustion of coal in industrial fires, 11:29199 (R;XE)
COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Comparative Evaluations
Generic studies of advanced fluid bed air heater technology. Topical report Number 6. Costs and economic analyses of the generic fluid bed air heater systems (Including topping combustion, pressurizing, etc.), 11:29216 (R;US)
Economic Analysis
Generic studies of advanced fluid bed air heater technology. Topical report Number 6. Costs and economic analyses of the generic fluid bed air heater systems (Including topping combustion, pressurizing, etc.), 11:29216 (R;US)
COMMERCIAL BUILDINGS
Design
Design of energy-responsive commercial buildings, 11:30005 (RA;US)
Energy Conservation
Measures for energy conservation in buildings: Singapore experience, 11:30011 (RA;US)
Energy Consumption
Design of energy-responsive commercial buildings, 11:30005 (RA;US)
Results from the Non-Residential Buildings Energy Consumption Survey (NBECS), 11:29966 (RA;US)
Power Demand
Results from the Non-Residential Buildings Energy Consumption Survey (NBECS), 11:29966 (RA;US)
Solar Water Heating
Solar water heating - recent trends, cost, and performance, 11:29592 (RA;US)
Thermal Insulation
Thermophysical properties of industrial insulators, 11:30021 (J;GB)
COMMERCIAL SECTOR
Energy Consumption
Commercial sector energy consumption in Taiwan, R.O.C., 11:29958 (RA;US)
Data on energy use in the commercial sector of the Federal Republic of Germany, 11:29961 (RA;US)
Directions in commercial sector electricity forecasting, 11:29972 (RA;US)
Electricity use in the US commercial sector 1960-2000, 11:29959 (RA;US)
Energy use in Norway's commercial sector (1965-1983), 11:29950 (RA;US)
Energy use in the commercial sector: the Norwegian energy consumption system and physical/technical energy models, 11:29968 (RA;US)
Forecasting at Sierra Pacific Power Company, 11:29973 (RA;US)
Overview of electricity use in the United States service sector, 11:29960 (RA;US)
Utility perspective on commercial sector markets, 11:29970 (RA;US)

Energy Models
Directions in commercial sector electricity forecasting, 11:29972 (RA;US)
Forecasting at Sierra Pacific Power Company, 11:29973 (RA;US)
Power Demand
Electricity use in the US commercial sector 1960-2000, 11:29959 (RA;US)
Overview of electricity use in the United States service sector, 11:29960 (RA;US)

COMMUNITIES
Biomass Conversion Plants
Community biogas programmes of Gram Vikas, 11:29472 (RA;DE)

COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Efficiency
A high efficiency I.C.F. driver employing magnetically confined plasma rings, 11:31225 (J;US)
Inertial Confinement
A high efficiency I.C.F. driver employing magnetically confined plasma rings, 11:31225 (J;US)
Plasma Rings
A high efficiency I.C.F. driver employing magnetically confined plasma rings, 11:31225 (J;US)

COMPOSITE MATERIALS
See also CERMETS
Chemical Vapor Deposition
Development of a new, faster process for the fabrication of ceramic fiber-reinforced ceramic composites by chemical vapor infiltration, 11:30130 (BA;US)
Fabrication
Chemical vapor infiltration of fiber-reinforced ceramic composites, 11:30143 (R;US)
Development of a new, faster process for the fabrication of ceramic fiber-reinforced ceramic composites by chemical vapor infiltration, 11:30130 (BA;US)
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Mechanical Properties
Specimen geometry effects on graphite/PMR-15 composites during thermo-oxidative aging, 11:30144 (R;US)
Sample Preparation
Specimen geometry effects on graphite/PMR-15 composites during thermo-oxidative aging, 11:30144 (R;US)
Thermal Testing
Specimen geometry effects on graphite/PMR-15 composites during thermo-oxidative aging, 11:30144 (R;US)
Tomography
Use of a medical scanner for non-destructive control of composite materials, 11:30382 (R;FR;In French)

COMPOUND NUCLEI
Lifetime
X detection in heavy ion induced reactions. Application to the lifetime measurement of a compound nucleus, 11:30912 (R;FR;In French)

COMPOUND-NUCLEUS REACTIONS
X-Ray Spectroscopy
X detection in heavy ion induced reactions. Application to the lifetime measurement of a compound nucleus, 11:30912 (R;FR;In French)

COMPOUNDS (INORGANIC)
See INORGANIC COMPOUNDS

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSED GASES
Hazards
Safety implications associated with in-plant pressurized gas storage and distribution systems, 11:29872 (J;US)
Safety
Safety implications associated with in-plant pressurized gas storage and distribution systems, 11:29872 (J;US)

COMPTON SCATTERING TOMOGRAPHY
Tomography based on the detection by a gamma camera of the 90° Compton scattering of a planar gamma beam produced by an external source.
High-Purity GE Detectors
A new Compton densitometer for measuring pulmonary edema, 11:30665 (J;US)

COMPTON SPECTROMETERS
Design
Influence of electron momentum on the shape of backscatter peaks in gamma-ray spectrometers, 11:30483 (J;NL)
Efficiency
Influence of electron momentum on the shape of backscatter peaks in gamma-ray spectrometers, 11:30483 (J;NL)

COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY

COMPUTER CALCULATIONS
Methods, not results.
Multiprocessor sparse L/U decomposition with controlled fill-in. Final report, 11:31280 (R;US)

COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also A CODES
E CODES
G CODES
M CODES
O CODES
R CODES
S CODES
A Codes
Transmission of fast neutrons through an iron sphere, 11:31091 (J;US)
C Codes
Evaluation of blast designs for in situ oil shale retorting, 11:29262 (BA;US)
Rock motion modeling of oil shale cratering experiments, 11:29264 (BA;US)
Certification
Analysis of the certification process of computer programs used in a nuclear power plant, using the management systems approach, 11:29846 (R;US)
D Codes
Diffusion approximation for modeling of 3-D radiation distributions, 11:30948 (R;US)
Evaluation of blast designs for in situ oil shale retorting, 11:29262 (BA;US)
Design
Quantification of roadway fugitive dust at a large Midwestern steel mill, 11:30533 (RA;US)
Failures
Research in computer science. semiannual report, 11:31283 (R;US)
I Codes
Surface effects on sputtered atoms and their angular and energy dependence, 11:31252 (J;US)
J Codes
An assessment of tritium breeding requirements based on the tritium fuel cycle, 11:31088 (J;US)
R Codes
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
Sputtering performance of a pumped limiter for an ignition tokamak, 11:31090 (J;US)
T Codes
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
Overview of the Fusion Power Demonstration study, 11:31129 (J;US)
Plasma heating systems module for TMRSC, 11:31211 (J;US)
Tandem Mirror Reactor Systems Code (TMRSC), 11:31117 (J;US)
TRIO a general computer code for reactor 3-D flows analysis. Application to a LMFBR hot plenum, 11:30376 (R;FR)

V Codes
Computational methodology for the Oak Ridge Research Reactor (ORR) and Bulk Shielding Reactor (BSR): the VICTORR input processing code for the BOLD VENTURE system. Volume 2, 11:29821 (R;US)
Transmission of fast neutrons through an iron sphere, 11:31091 (J;US)
COMPUTER GRAPHICS
Computer Codes
ARC-OLOGY via TELL-A-GRAF, 11:31289 (R;US)
COMPUTER NETWORKS
Electronic mail at ANL. Revision, 11:31276 (R;US)
Computer Codes
MVUSRS utility reference manual, 11:31287 (R;US)
Configuration
Partitioning problems in parallel, pipelined and distributed computing. Final Report, 11:31282 (R;US)
Installation

Impact Tests
Drop testing at the Oak Ridge National Laboratory (TRUPACT-I and a TMI-2 defueling canister), 11:30333 (R;US)
Materials Testing
Experiences in development, qualification, and use of concrete high-integrity containers in commercial disposal of radioactive wastes, 11:29359 (RA;US)
Matrix Materials
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
CONTAINMENT BUILDINGS
Chemical Radiation Effects
The effectiveness of building wall boration in controlling the neutron responses in a fusion facility, 11:31242 (J;US)
Fluid-Structure Interactions
Independent analysis of selected core-concrete interaction and fission product release experiments with CORCON-MOD2 and VANESA, 11:29829 (R;US)
Physical Radiation Effects
The effectiveness of building wall boration in controlling the neutron responses in a fusion facility, 11:31242 (J;US)
Protective Coatings
The effectiveness of building wall boration in controlling the neutron responses in a fusion facility, 11:31242 (J;US)
Surface Coating
The effectiveness of building wall boration in controlling the neutron responses in a fusion facility, 11:31242 (J;US)
CONTAINMENT SYSTEMS
Design
Fission gas detection system, 11:29875 (P;US)
CONTINENTAL SHELF
Geochemistry
Organic geochemistry of continental margin and deep ocean sediments. Final report, 11:29231 (R;US)
Petroleum Deposits
Organic geochemistry of continental margin and deep ocean sediments. Final report, 11:29231 (R;US)

Petroleum Geology
Organic geochemistry of continental margin and deep ocean sediments. Final report, 11:29231 (R;US)
CONTROL EQUIPMENT
Performance Testing
Initial test results and test plan for differential temperature controllers used in solar energy systems, 11:29600 (R;US)
CONTROL THEORY
Zero models and pole models for multivariable systems, 11:30960 (R;US)
CONVECTION
Instability
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
CONVEYORS
See also BELT CONVEYORS
Design
Design considerations to avoid common fly ash conveying problems, 11:29740 (RA;US)
COOKING
See FOOD PROCESSING
COOLANTS
See also specific coolant materials.
Comparative Evaluations
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)
Fragmentation
Fragmentation of suddenly heated liquids in ICF reactors, 11:31189 (J;US)
Heating
Fragmentation of suddenly heated liquids in ICF reactors, 11:31189 (J;US)
Materials Testing
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
COOLERS
See HEAT EXCHANGERS
COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS
COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
THERMONUCLEAR REACTOR COOLING SYSTEMS
Biological Fouling
Fouling control in cooling systems using brackish water, 11:29681 (R;FI;In Finnish)
Computerized Control Systems
Microprocessor controller for mold heating and cooling. Final report, 11:30391 (R;US)
Failures
Temperature history for canistered fuel lag storage areas during the loss of cooling air at the receiving and handling building of the MRS Facility, 11:29302 (R;US)
COPPER
Chemical Reaction Kinetics
Kinetics and mechanisms of electron transfer between blue copper proteins and electronically excited chromium and ruthenium polypyridine complexes, 11:30292 (J;US)
Collisions
Microparticles and their effects in vacuum diodes, 11:30398 (J;US)
Environmental Transport
Division of Biogeochemical Ecology FY-1985 highlights, 11:30760 (RA;US)
Physical Radiation Effects
Effects of neutron irradiation at 450°C and 16 dpa on the properties of various commercial copper alloys, 11:31036 (RA;US)
Self-Diffusion
Silver-tracer diffusion in Cu_2O, 11:30230 (J;GB)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:30729 (J;NL)
COPPER 64
Diffusion
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
Isotope Effects
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Materials Testing
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Microstructure
Microstructural examination of pure copper and three copper alloys irradiated in FFTF, 11:30097 (R;US)
Physical Radiation Effects
Microstructural examination of pure copper and three copper alloys irradiated in FFTF, 11:30097 (R;US)
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
COPPER BASE ALLOYS
Microstructure
Microstructural examination of pure copper and three copper alloys irradiated in FFTF, 11:30097 (R;US)
Physical Radiation Effects
Effects of neutron irradiation at 450°C and 16 dpa on the properties of various commercial copper alloys, 11:31036 (RA;US)
Microstructural examination of pure copper and three copper alloys irradiated in FFTF, 11:30097 (R;US)
Response of selected high strength high conductivity copper alloys to simulated fusion irradiation and temperature conditions, 11:31035 (RA;US)
COPPER COMPLEXES
Absorption Spectroscopy
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)
Emission Spectroscopy
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)
COPPER COMPOUNDS
See also COPPER OXIDES
COPPER SELENIDES
Polymerization
Raman spectroscopy of polymers of metal protoporphyrin free acids on metal electrodes, 11:30283 (J;US)
COPPER OXIDES
Crystal Defects
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Point Defects
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
Self-Diffusion
Diffusion mechanisms in transition-metal oxides, 11:30137 (J;US)
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
Vacancies
Silver-tracer diffusion in Cu_2O, 11:30230 (J;GB)
COPPER SELENIDE SOLAR CELLS
Fabrication
Photoluminescence studies of CuIn-Se_2 thin films and crystals, 11:29552 (BA;US)
Status of photovoltaics R & D at SERI, 11:29548 (BA;US)
Thin-film tandem solar cells based on $CuInSe_2$, 11:29550 (BA;US)
Physical Radiation Effects
Photon radiation effects on CdS/CuInSe2 thin film solar cells, 11:29533 (RA;US)
COPPER SELENIDES
Crystal Defects
Photoluminescence studies of CuIn-Se_2 thin films and crystals, 11:29552 (BA;US)

Photoluminescence
Photoluminescence studies of CuIn-Se$_2$ thin films and crystals, 11:29552 (BA;US)
COPPER VAPOR LASERS
See GAS LASERS
CORALS
Population Dynamics
Need to test assumptions of models: the population biology of sessile invertebrates on coral reefs, 11:30602 (RA;US)
CORES (REACTOR)
See REACTOR CORES
CORIUM
Fluid-Structure Interactions
Independent analysis of selected core-concrete interaction and fission product release experiments with CORCON-MOD2 and VANESA, 11:29829 (R;US)
CORN (MAIZE)
See MAIZE
CORN STOVER
See AGRICULTURAL WASTES
MAIZE
CORROSION
See also STRESS CORROSION
Acoustic Monitoring
Use of an acoustic borehole televiewer to investigate casing corrosion in geothermal wells, 11:29623 (R;US)
Monitoring
High resolution in situ ultrasonic corrosion monitor, 11:29807 (P;US)
Ultrasonic Testing
High resolution in situ ultrasonic corrosion monitor, 11:29807 (P;US)
CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
Corrosion Resistance
Research on erosion and corrosion of cobalt-free materials, 11:30093 (R;FR;In German)
COSMIC GAMMA BURSTS
Gamma Spectra
Soft-spectrum gamma-ray bursts, 11:30787 (RA;US)
COSMIC GAMMA SOURCES
Reviews
Point source of very high energy gamma ray, 11:30771 (RA;JP)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC PROTONS
Prior to July, 1975 information was indexed to PROTONS.
Cosmic Ray Propagation
Some topics in cosmic rays, 11:30780 (RA;JP)
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.

MONOCRYSTALS
POLYCRYSTALS
Electron Spin Resonance
Structure of the σ^* radical anion in irradiated iodoacetamide, 11:30307 (J;GB)
Mathematical Models
Crystallography of icosahedral crystals, 11:30952 (R;US)
Molecular Structure
Application of external forces to computational models of crystals, 11:30116 (J;DK)
Point Defects
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
Self-Diffusion
Diffusion and point defects in Cu_2O, 11:30139 (J;GB)
Shear Properties
Application of external forces to computational models of crystals, 11:30116 (J;DK)
CURIUM COMPLEXES
Enthalpy
Calorimetric studies of curium complexation, 11:30320 (J;US)
Entropy
Calorimetric studies of curium complexation, 11:30320 (J;US)
Free Enthalpy
Calorimetric studies of curium complexation, 11:30320 (J;US)
CURRENT-DRIVE HEATING
Efficiency
Top-versus-side launch of lower hybrid waves in PLT, 11:30990 (J;AT)
Numerical Solution
Numerical modeling of lower hybrid heating and current drive, 11:30979 (R;US)
CURRENTS (ELECTRIC)
See ELECTRIC CURRENTS
CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Oxidation
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Photochemistry
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Separation Processes
Selectivity variations in anion chromatography, 11:30184 (D;US)
CYCLOALKENES
See also CYCLOPENTADIENE
Configuration
Conformational analysis of 1,4-cyclohexadienes. A shallow boat-shaped 1,4-dihydronaphthalene, 11:30261 (J;US)
Conformational Changes
Conformational analysis of 1,4-cyclohexadienes. A shallow boat-shaped 1,4-dihydronaphthalene, 11:30261 (J;US)
CYCLOHEXANE
Pyrolysis
Formation of benzene by the pyrolysis of 4-vinylcyclohexene regiospecific formation of anthracenes in the pyrolysis of dibenzosuberones and related systems, 11:30271 (D;US)
Radiolysis
Pulse radiolysis of cyclohexane: the identity of the high-mobility positive ion (Pulsed Electron Beam), 11:30304 (J;NL)
Solvent Properties
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
CYCLOPENTADIENE
Binding Energy
Comparison of thionitrosyl and nitrosyl bonding in dicarbonyl(eta^5-cyclopentadienyl)chromium complexes by gas-phase ultraviolet and x-ray photoelectron spectroscopy, 11:30266 (J;US)
CYCLOTRONS
Construction
Low energy cyclotron for radiocarbon dating, 11:30410 (R;US)
Ion Beam Injection
Radial injection in the Orsay cryogenic cyclotron project, 11:30408 (R;FR;In French)
Performance Testing
Low energy cyclotron for radiocarbon dating, 11:30410 (R;US)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Design
Thermal analysis of UF_6 cylinder inside a protective overpack, 11:30385 (R;US)
Thermal Analysis
Thermal analysis of UF_6 cylinder inside a protective overpack, 11:30385 (R;US)
CYSTEINE
Decomposition
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Oxidation
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Radiolysis
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Reduction
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Lifetime
Lifetime measurements of hadrons containing heavy quarks at PETRA and PEP, 11:30843 (R;GB)
Quarks
Lifetime measurements of hadrons containing heavy quarks at PETRA and PEP, 11:30843 (R;GB)

CYCLOPENTADIENE
Decomposition
Thermodynamic and kinetic properties of the cyclohexadienyl radical, 11:30243 (J;US)
DIESEL ENGINES
Alcohol Fuels
Alcohol as a fuel in a high speed diesel engine with double injection system, 11:30041 (R;FI;In Finnish)
Cold-start tests with speed diesel engines using alcohol as main fuel, 11:30042 (R;FI;In Finnish)
Endurance test of a high speed diesel engine using ethanol fuel, 11:30038 (R;FI;In Finnish)
Exhaust gas analysis of a diesel engine using alcohol as a fuel, 11:30040 (R;FI;In Finnish)
Practical properties of alcohol mixtures containing ignition improver when used as a fuel in diesel engines, 11:30037 (R;FI;In Finnish)
Bench-Scale Experiments
Exhaust gas analysis of a diesel engine using alcohol as a fuel, 11:30040 (R;FI;In Finnish)
Design
Advanced adiabatic diesel engine for passenger cars, 11:30045 (B;US)
Ethanol Fuels
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways, 11:30039 (R;FI;In Finnish)
Fuel Injection Systems
Alcohol as a fuel in a high speed diesel engine with double injection system, 11:30041 (R;FI;In Finnish)
Cold-start tests with speed diesel engines using alcohol as main fuel, 11:30042 (R;FI;In Finnish)
Endurance test of a high speed diesel engine using ethanol fuel, 11:30038 (R;FI;In Finnish)
Practical properties of alcohol mixtures containing ignition improver when used as a fuel in diesel engines, 11:30037 (R;FI;In Finnish)
Fuel Substitution
The effect of alcohol fueling on diesel engine durability, 11:30046 (B;US)
Ignition Systems
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways, 11:30039 (R;FI;In Finnish)
Performance Testing
The effect of alcohol fueling on diesel engine durability, 11:30046 (B;US)
Reliability
Review of issues related to improving nuclear power plant diesel generator reliability, 11:29803 (R;US)
Wear Resistance
The effect of alcohol fueling on diesel engine durability, 11:30046 (B;US)
DIESEL FUELS
Ignition
Induction period for ignition of fuel sprays at high temperatures and pressures, 11:30033 (R;US)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFUSION
Mathematical Models
Wind direction meander at a coastal site during onshore flows, 11:30521 (J;US)
Reviews
Some comments on multicomponent diffusion: negative main term diffusion coefficients, second law constraints, solvent choices, and reference frame transformations, 11:30198 (J;US)
DIGESTER GAS
See METHANE
DIMERS
Dissociation
Vibrational predissociation of SF_6 clusters in a supersonic molecular beam, 11:30290 (J;US)
Photolysis
Vibrational predissociation of SF_6 clusters in a supersonic molecular beam, 11:30290 (J;US)

DRIFT CHAMBERS
Analog-to-Digital Converters
dE/dx electronics for MARK II experiment at SLAC, 11:30445 (J;US)
CAMAC System
Waveform sampler CAMAC module, 11:30444 (J;US)
Construction
Radial wire drift chambers for CDF forward tracking, 11:30454 (J;US)
Data Acquisition
Soudan 2 data acquisition and trigger electronics, 11:30448 (J;US)
Data Acquisition Systems
MARK II end cap calorimeter electronics, 11:30470 (J;US)
SLAC Scanner Processor applications in the data acquisition system for the upgraded MARK II detector, 11:30462 (J;US)
Design
Feasibility tests of a high resolution sampling radial drift chamber, 11:30488 (J;NL)
Fastbus System
dE/dx electronics for MARK II experiment at SLAC, 11:30445 (J;US)
SLAC Scanner Processor applications in the data acquisition system for the upgraded MARK II detector, 11:30462 (J;US)
Feasibility Studies
Feasibility tests of a high resolution sampling radial drift chamber, 11:30488 (J;NL)
Performance
Performance of the SLD Central Drift Chamber prototype, 11:30476 (J;US)
Performance of the cylindrical drift chamber for the crystal box at LAMPF, 11:30491 (J;NL)
Performance Testing
Analysis of digitized waveforms in a prototype of the SLD central drift chamber, 11:30452 (J;US)
Radial wire drift chambers for CDF forward tracking, 11:30454 (J;US)
Readout Systems
dE/dx electronics for MARK II experiment at SLAC, 11:30445 (J;US)
Trigger Circuits
Soudan 2 data acquisition and trigger electronics, 11:30448 (J;US)
Wave Forms
Analysis of digitized waveforms in a prototype of the SLD central drift chamber, 11:30452 (J;US)
DRILL HOLES
See BOREHOLES

DRILLING EQUIPMENT
Design
Earth science instrumentation update review FY1985, 11:29634 (RA;US)
Field Tests
Earth science instrumentation update review FY1985, 11:29634 (RA;US)
DRINKING WATER
Contamination
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
DRY DEPOSITION
See DEPOSITION
DRY STORAGE
Radiation Hazards
Radiological analysis for dry cask storage of spent fuels, 11:29443 (RA;US)
D-T REACTORS
Breeding Blankets
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Breeding Ratio
Deuterium-tritium fuel self-sufficiency in fusion reactors, 11:31086 (J;US)
Coolants
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Elmo Bumpy Torus
The role of fusion reaction products in the stability of EBT reactors, 11:31167 (J;US)
Fuel Cycle
An assessment of tritium breeding requirements based on the tritium fuel cycle, 11:31088 (J;US)
Materials Testing
Transmission of fast neutrons through an iron sphere, 11:31091 (J;US)
Muon-Catalyzed Fusion
Reactivation coefficient of muon-catalyzed deuterium-tritium fusion and its enhancement, 11:31089 (J;US)
Thermonuclear Reactor Materials
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
DTO
See DEUTERIUM COMPOUNDS
DUBAI
See UNITED ARAB EMIRATES
DUCTS
Design
Mechanically attached load pad for liquid metal nuclear reactor fuel assemblies, 11:29782 (P;US)
DUSTS
Air Pollution Control
Ceramic-made boxer-charger for precharging applications, 11:29713 (RA;US)
Development and high temperature application of a novel method for measuring ash deposits and cake removal on filter bags, 11:29688 (RA;US)
Practical implications of pulse energization of electrostatic precipitators, 11:29706 (RA;US)
Technical manual on the identification, assessment, and control of fugitive emissions, 11:30532 (RA;US)
Windbreak effectiveness for the control of fugitive-dust emissions from storage piles - a wind tunnel study, 11:30535 (RA;US)
Ecological Concentration
Quantification of roadway fugitive dust at a large Midwestern steel mill, 11:30533 (RA;US)
Electrical Properties
Onset of electrical breakdown in dust layers, 11:29720 (RA;US)
Ignition
Fire hazards of oil shale dust layers on hot surfaces, 11:29278 (BA;US)
DYE LASERS
Design
Efficient generation of tunable radiation below 100 nm in krypton, 11:30370 (BA;US)
Extreme Ultraviolet Radiation
Efficient generation of tunable radiation below 100 nm in krypton, 11:30370 (BA;US)
Light Sources
Resonantly enhanced method for generation of tunable, coherent vacuum ultraviolet radiation, 11:30369 (P;US)
Optical Pumping
Resonantly enhanced method for generation of tunable, coherent vacuum ultraviolet radiation, 11:30369 (P;US)
Resonance
Resonantly enhanced method for generation of tunable, coherent vacuum ultraviolet radiation, 11:30369 (P;US)
Tuning
Resonantly enhanced method for generation of tunable, coherent vacuum ultraviolet radiation, 11:30369 (P;US)

Simple methodology for obtaining battery discharge times (and vehicle ranges) for arbitrarily structured load profiles, 11:30061 (RA;US)
Test programs at the National Battery Test Laboratory, 11:29885 (RA;US)

Validity of cycle life bench test data in relation to real world in-vehicle testing, 11:30059 (RA;US)
Lead-Acid Batteries
Design, electric vehicle simulation program and duty cycle for a computer controlled bench test of lead-acid batteries, 11:30057 (RA;US)
Innovative on-board instrumentation for EV battery characterization, 11:30055 (RA;US)
Overview of Australian lead/acid battery test programs, 11:29879 (RA;US)
Performance testing of advanced lead-acid batteries for electric vehicles, 11:30053 (RA;US)
Rebirth of the lead-acid battery - meeting the electric vehicle challenges of the 1980s, 11:30066 (BA;GB)
Test and data reduction algorithm for the evaluation of lead-acid battery packs, 11:30052 (RA;US)
Testing of batteries in Germany, 11:29881 (RA;US)
Meetings
Technological advances in vehicle design: electric and hybrid vehicles, 11:30064 (B;GB)
Operation
Investigations of three-phase current drives for electric battery cars. Vol. 2. Simulation; theory and results, 11:30063 (R;DE;In German)
Performance Testing
Comparison of laboratory, dynamometer and road tests of an EV, 11:30060 (RA;US)
Range
Examination of battery-related electric vehicle track and field measurements, 11:30058 (RA;US)
Simple methodology for obtaining battery discharge times (and vehicle ranges) for arbitrarily structured load profiles, 11:30061 (RA;US)
Road Tests
Comparison of laboratory, dynamometer and road tests of an EV, 11:30060 (RA;US)
Simulation
Investigations of three-phase current drives for electric battery cars. Vol. 2. Simulation; theory and results, 11:30063 (R;DE;In German)
Sodium-Sulfur Batteries
Accelerated life testing of sodium-sulfur cells, 11:30054 (RA;US)
Design of the thermal management systems for NaS-traction-batteries by using battery models, 11:30056 (RA;US)
ELECTROCHEMICAL COATING
Numerical Analysis
Comparison of a boundary element and finite element solution of an electrochemical plating problem, 11:30328 (R;US)
ELECTRODEPOSITED COATINGS
Adhesion
Method of measuring metal coating adhesion, 11:30109 (P;US)
Destructive Testing
Method of measuring metal coating adhesion, 11:30109 (P;US)
ELECTRODES
See also ANODES
CATHODES
Current Density
Electrical characteristics of large-diameter discharge electrodes in electrostatic precipitators, 11:29718 (RA;US)
Design
Laboratory analysis of corona discharge electrodes and back corona phenomena, 11:29719 (RA;US)
Performance of large-diameter wires as discharge electrodes in electrostatic precipitators, 11:29716 (RA;US)
Erosion
Cesium transpiration through a negative-ion forming electrode, 11:31266 (BA;US)
Tokamak arc damage, 11:31005 (J;US)
Mathematical Models
Prediction of voltage-current curves for novel electrodes arbitrary wire electrodes on axis, 11:29699 (RA;US)
Morphology
Post-test analyses of Na/S cells and aqueous batteries, 11:29898 (RA;US)
Performance Testing
Performance of large-diameter wires as discharge electrodes in electrostatic precipitators, 11:29716 (RA;US)
Stresses
Weighted discharge electrodes - a solution to mechanical fatigue problems, 11:29743 (RA;US)
ELECTROLYTES
See also SOLID ELECTROLYTES
Coatings
Coated powder for electrolyte matrix for carbonate fuel cell, 11:29986 (P;US)
ELECTROMAGNETIC FIELDS
Biological Effects
Biological effects of electric fields: an overview, 11:30732 (BA;US)
Reviews
Biological effects of electric fields: an overview, 11:30732 (BA;US)
ELECTROMAGNETISM
Algebra
Comparison of Clifford and Grassmann algebras in applications to electromagnetics. Revision 1, 11:30959 (R;US)
Computerized Simulation
Evolving directions of PC applications in electromagnetics analysis and design, 11:31288 (R;US)
ELECTROMAGNETS
See also SUPERCONDUCTING MAGNETS
Mathematical Models
Low frequency electromagnetic field computation in three dimensions, 11:30329 (R;GB)
ELECTROMETERS
Performance
Rotor electrometer for fractional charge searches, 11:30499 (R;US)
Rotors
Rotor electrometer for fractional charge searches, 11:30499 (R;US)
ELECTRON ANTINEUTRINOS
Mass
Brief review on neutrino mass measurements, 11:30833 (RA;JP)
Electron antineutrino mass from the β-decay of ^{3}H, 11:30826 (RA;JP)
ELECTRON BEAM INDUCED CURRENT
See SCANNING ELECTRON MICROSCOPY
ELECTRON BEAM WELDING
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING
ELECTRON DENSITY
Spatial Distribution
Calculated electron density distributions in ScS and Sc_3S_4, 11:30205 (J;US)
ELECTRON DETECTION
Cherenkov Counters
Further measurements of electron transmission and avalanche gain in narrow lead glass tubing, 11:30461 (J;US)
Drift Chambers
Performance of the cylindrical drift chamber for the crystal box at LAMPF, 11:30491 (J;NL)
Multiwire Proportional Chambers
Charge division using carbon filaments for obtaining coordinate information from detection of single electrons, 11:30478 (J;US)
Shower Counters
Design and performance of a CCD based readout for the DELPHI barrel electromagnetic calorimeter, 11:30467 (J;US)
ELECTRON NEUTRINOS
See also ELECTRON ANTINEUTRINOS
Mass
Measurement of the mass of the electron neutrino using electron capture in ^{163}Ho, 11:30834 (RA;JP)
Rest Mass
Measurement of the mass of the electron neutrino using electron capture in ^{163}Ho, 11:30827 (RA;JP)
ELECTRON PARAMAGNETIC RESONANCE
See ELECTRON SPIN RESONANCE

ELECTRON SPIN RESONANCE
Data Analysis
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:29181 (R;US)
Research Programs
Electron spin mapping of coal molecular structure by ENDOR. Quarterly technical progress report, 11:29181 (R;US)
ELECTRON TRANSFER
Not for CHARGE EXCHANGE.
Chemical Reaction Kinetics
Kinetics of one-electron transfer reactions involving ClO_3 and NO_3, 11:30204 (J;US)
ELECTRONIC CIRCUITS
See also PRINTED CIRCUITS
Noise Pollution Control
Noise isolation system for high-speed circuits, 11:30401 (P;US)
Optimization
Low-pass filters for signal averaging, 11:30399 (J;US)
Performance
Low-pass filters for signal averaging, 11:30399 (J;US)
ELECTRON-MOLECULE COLLISIONS
Electron Attachment
S-wave threshold in electron attachment - observations and cross sections in CCl4 and SF6 at ultralow electron energies, 11:30818 (J;US)
ELECTRON-POSITRON COLLISIONS
Multiple Production
Charged-particle multiplicity distributions in e^+e annihilation and negative binomial distributions, 11:30860 (R;XA)
Particle Production
New particle searches at e^+e machines, 11:30838 (R;FR)
ELECTRON-POSITRON INTERACTIONS
Particle Production
ASP: a search for single photon events at PEP, 11:30846 (R;US)
ELECTROPLATING
Control Systems
Control of precious metal plating baths using electrogravimetric analysis, 11:30330 (R;US)
ELECTROSTATIC PRECIPITATORS
Computerized Simulation
Microcomputer programs for precipitator performance estimates, 11:29696 (RA;US)
Current Density
Bipolar current probe for diagnosing full-scale precipitators, 11:29721 (RA;US)
Fluid dynamics of electrostatic precipitators: effects of electrode geometry, 11:29727 (RA;US)
Design
Comparison of US and Japanese practices in the specification and operation and maintenance of electrostatic precipitators, 11:29735 (RA;US)
High-temperature, high-pressure electrostatic precipitation, current status, 11:29685 (RA;US)
Optimizing the performance of a modern electrostatic precipitator by design refinements, 11:29742 (RA;US)
Reducing electrostatic precipitator power consumption, 11:29739 (RA;US)
Use of a mobile electrostatic precipitator for pilot studies, 11:29698 (RA;US)
Economics
Economics of electrostatic precipitators and fabric filters, 11:29689 (RA;US)
Efficiency
Measurement of the electrokinetic transport properties of particles in an electrostatic precipitator, 11:29744 (RA;US)
Electric Fields
Electrical characteristics of large-diameter discharge electrodes in electrostatic precipitators, 11:29718 (RA;US)
Static field strength in wire-plate electrostatic precipitators with profiled collecting electrodes by an experimental method, 11:29726 (RA;US)
Electric Potential
Numerical computation of the electrical conditions in a wire-plate electrostatic precipitator using the finite element technique, 11:29700 (RA;US)
Performance of large-diameter wires as discharge electrodes in electrostatic precipitators, 11:29716 (RA;US)
Energy Efficiency
Reducing electrostatic precipitator power consumption, 11:29739 (RA;US)
Static field strength in wire-plate electrostatic precipitators with profiled collecting electrodes by an experimental method, 11:29726 (RA;US)
Feasibility Studies
Charging of particulates by evaporating charged water droplets, 11:29694 (RA;US)
Pulsing on a cold-side precipitator: Florida Power Corporation, Crystal River, Unit 1, 11:29710 (RA;US)
Maintenance
Electrostatic precipitator EUS section failure: operation and maintenance, 11:29745 (RA;US)
Manuals
Operation and maintenance manuals for electrostatic precipitators and fabric filters, 11:29736 (RA;US)
Mathematical Models
Analysis of error in precipitator performance estimates, 11:29697 (RA;US)
Operation
Comparison of US and Japanese practices in the specification and operation and maintenance of electrostatic precipitators, 11:29735 (RA;US)
Electrostatic precipitator EUS section failure: operation and maintenance, 11:29745 (RA;US)
Operation and maintenance manuals for electrostatic precipitators and fabric filters, 11:29736 (RA;US)
Prediction of voltage-current curves for novel electrodes arbitrary wire electrodes on axis, 11:29699 (RA;US)
Use of a mobile electrostatic precipitator for pilot studies, 11:29698 (RA;US)
Optimization
Conditioning of power station flue gases to improve electrostatic precipitator efficiency, 11:29702 (RA;US)
Economics of electrostatic precipitators and fabric filters, 11:29689 (RA;US)
Estimating the benefits of SO_3 gas conditioning on the performance of utility precipitators when burning US coals, 11:29690 (RA;US)
Field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:29701 (RA;US)
Full scale experience with pulsed energization of electrostatic precipitators, 11:29708 (RA;US)
Laboratory and full-scale characteristics of electrostatic precipitators with rigid mast electrodes, 11:29707 (RA;US)
New life for old weighted wire precipitators: rebuilding with rigid electrodes, 11:29709 (RA;US)
Optimizing the collector sections of multi-stage electrostatic precipitators, 11:29712 (RA;US)
Optimizing the performance of a modern electrostatic precipitator by design refinements, 11:29742 (RA;US)
Pilot-scale study of a new method of flue-gas conditioning with ammonium sulfate, 11:29703 (RA;US)
Practical implications of pulse energization of electrostatic precipitators, 11:29706 (RA;US)
Precipitator performance enhancement with pulsed energization, 11:29714 (RA;US)
Pulse energization system of electrostatic precipitator for retrofitting application, 11:29705 (RA;US)
Weighted discharge electrodes - a solution to mechanical fatigue problems, 11:29743 (RA;US)
Performance
Acid rain control options - impact on precipitator performance, 11:29734 (RA;US)
Aerosol particle charging in a pulsed corona discharge, 11:29715 (RA;US)
Analysis of air heater - fly ash - sulfuric acid vapor interactions, 11:29723 (RA;US)

Critical electrostatic precipitator purchasing concepts, 11:29738 (RA;US)
Laboratory analysis of corona discharge electrodes and back corona phenomena, 11:29719 (RA;US)
Method for predicting the effective volume resistivity of a sodium depleted fly ash layer, 11:29722 (RA;US)
Microcomputer programs for precipitator performance estimates, 11:29696 (RA;US)
Microcomputer models for particulate control, 11:29691 (RA;US)
Particle charging with an electron beam precharger, 11:29693 (RA;US)
Technical evaluation of plate spacing effects on fly ash collection in precipitators, 11:29717 (RA;US)
Performance Testing
Analysis of error in precipitator performance estimates, 11:29697 (RA;US)
Field study of multi-stage electrostatic precipitators, 11:29711 (RA;US)
Test results of a precipitator operating at high-temperature and high-pressure conditions, 11:29686 (RA;US)
Quality Control
Critical electrostatic precipitator purchasing concepts, 11:29738 (RA;US)
Research Programs
Technical evaluation of plate spacing effects on fly ash collection in precipitators, 11:29717 (RA;US)
Retrofitting
Ceramic-made boxer-charger for precharging applications, 11:29713 (RA;US)
Pulse energization system of electrostatic precipitator for retrofitting application, 11:29705 (RA;US)
Removal of sulfur dioxide and particulate using E-SOX, 11:29733 (RA;US)
Space Charge
Experimental studies of space charge effects in an ESP, 11:29724 (RA;US)
Test Facilities
Electrostatic precipitator facility for turbulence research, 11:29725 (RA;US)
Turbulence
Electrostatic precipitator facility for turbulence research, 11:29725 (RA;US)

FAILURE MODE ANALYSIS
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
FALLOUT
For radioactive fallout only.
Biological Localization
Retention of simulated fallout particles by lichens and mosses, 11:30587 (J;US)
Environmental Transport
Retention of simulated fallout particles by lichens and mosses, 11:30587 (J;US)
Uptake
Retention of simulated fallout particles by lichens and mosses, 11:30587 (J;US)
FALLOUT PARTICULATES
See FALLOUT PARTICLES
FARADAY GENERATORS
See MHD GENERATORS
FARMS
Biomass Conversion Plants
Experiences with a low temperature biogas plant, 11:29479 (RA;DE)
FAST FLUX TEST FACILITY REACTOR
See FFTF REACTOR
FAST MAGNETOACOUSTIC WAVES
Wave Propagation
Alpha-driven fast magnetosonic wave heating in tokamak plasmas, 11:31007 (J;US)
FAST NEUTRONS
Absorption
Transmission of fast neutrons through an iron sphere, 11:31091 (J;US)
FASTBUS SYSTEM
Alarm Systems
FASTBUS rack alarms and limits, 11:30465 (J;US)
Cooling
FASTBUS cooling, 11:30466 (J;US)
Design
A FASTBUS logic analyzer based on SLAC SNOOP diagnostic modules, 11:30464 (J;US)
FASTBUS cooling, 11:30466 (J;US)
The FASTBUS Segment Extension as a crate coupling concept, 11:30463 (J;US)
Performance Testing
A FASTBUS logic analyzer based on SLAC SNOOP diagnostic modules, 11:30464 (J;US)
Programming
The FASTBUS Segment Extension as a crate coupling concept, 11:30463 (J;US)
Reviews
FASTBUS review 1985, 11:30435 (J;US)
Specifications
FASTBUS review 1985, 11:30435 (J;US)
Uses
FASTBUS review 1985, 11:30435 (J;US)
FASTENERS
Design
Metal-to-ceramic attachment device, 11:30110 (P;US)
FEDERAL REGION I
Prior to June 1982 this concept was indexed to NORTH ATLANTIC REGION.
See also MASSACHUSETTS
NEW HAMPSHIRE
Air Pollution Monitoring
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
FEDERAL REGION V
Prior to June 1982 this concept was indexed to GREAT LAKES REGION.
See also ILLINOIS
INDIANA
Hot-Dry-Rock Systems
Exploration for Hot Dry Rock geothermal resources in the Midcontinent USA. Volume 1. Introduction, geologic overview, and data acquisition and evaluation, 11:29622 (R;US)
FEDERAL REGION VI
Prior to June 1982 this concept was indexed to SOUTHWEST REGION.
See also TEXAS
Hot-Dry-Rock Systems
Exploration for Hot Dry Rock geothermal resources in the Midcontinent USA. Volume 1. Introduction, geologic overview, and data acquisition and evaluation, 11:29622 (R;US)
FEDERAL REGION VII
Prior to June 1982 this concept was indexed to MIDWEST REGION.
See also IOWA
MISSOURI
Air Quality
A case study of the effects of local and distant sources of alkaline material on precipitation in the midwest and plains, 11:30550 (J;US)
Hot-Dry-Rock Systems
Exploration for Hot Dry Rock geothermal resources in the Midcontinent USA. Volume 1. Introduction, geologic overview, and data acquisition and evaluation, 11:29622 (R;US)
FEDERAL REGION X
Prior to June 1982 this concept was indexed to PACIFIC NORTHWEST REGION.

OREGON
WASHINGTON
Diffuse Solar Radiation
Pacific Northwest Solar Radiation Data, 11:29497 (R;US)
Direct Solar Radiation
Pacific Northwest Solar Radiation Data, 11:29497 (R;US)
FEDERAL REPUBLIC OF GERMANY
Air Pollution Control
Flue gas desulphurization and NO/sub x/ reduction, 11:29196 (R;SE)
Commercial Sector
Data on energy use in the commercial sector of the Federal Republic of Germany, 11:29961 (RA;US)
Forests
Comparison of the methods of survey adopted in the Federal Republic of Germany and Austria, 11:30713 (RA;DE;In German)
Conspectus of the results of the 1984 inventory on forest decline, 11:30705 (RA;DE;In German)
Current damage situation in Bavaria, 11:30706 (RA;DE;In German)
Current damage situation in Baden-Wuerttemberg, 11:30707 (RA;DE;In German)
Current damage situation in Hesse, 11:30708 (RA;DE;In German)
Current damage situation in North-Rhine-Westphalia, 11:30709 (RA;DE;In German)
Forest damage in Lower Saxony, 11:30710 (RA;DE;In German)
Reflections regarding the further development of forest decline inventories for large areas, 11:30712 (RA;DE;In German)
State of forest decline in the Federal Republic of Germany. Vol. 1, 11:30704 (R;DE;In German)
Nuclear Power Plants
Advanced German Operator Support Systems, 11:29871 (J;US)
Radioactive Waste Facilities
Conceptual design for the injection of tritiated effluents into deep geological formations, 11:29361 (RA;US)
Radioactive Waste Processing
Cementation of radioactive wastes in the Federal Republic of Germany, 11:29377 (RA;US)

Service Sector
Trends of electricity consumption in the small consumers' sector of the Federal Republic of Germany, 11:29955 (RA;US)

FEDERATION OF MALAYA
See MALAYSIA

FEED MATERIALS PRODUCTION CENTER
Aerial Monitoring
Aerial radiological survey of the Feed Materials Production Center and surrounding area, Fernald, Ohio. Date of survey: April 1985, 11:30583 (R;US)
Radiation Monitoring
Aerial radiological survey of the Feed Materials Production Center and surrounding area, Fernald, Ohio. Date of survey: April 1985, 11:30583 (R;US)

FEEDBACK
Equivalent Circuits
Comparison of the domain and frequency domain state feedbacks, 11:30392 (R;US)

FEEDWATER
Chemical Analysis
Water chemistry control and analytical methods at medium pressure power plants, 11:29676 (R;FI;In Finnish)
Water Treatment
Water chemistry control and analytical methods at medium pressure power plants, 11:29676 (R;FI;In Finnish)

FELIX FACILITY
Crossed Fields
The Felix experiments: measurements of electromagnetic effects, 11:31164 (J;US)
Eddy Currents
The Felix experiments: measurements of electromagnetic effects, 11:31164 (J;US)
Electromagnetic Fields
The Felix experiments: measurements of electromagnetic effects, 11:31164 (J;US)

FERRIC COMPOUNDS
See IRON COMPOUNDS

FERRITIC STEELS
Fracture Properties
Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22} n/cm^2, 11:31060 (RA;US)
Impact Strength
Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects, 11:31061 (RA;US)
Materials Testing
Development of ferritic steels for reduced activation: the US program, 11:30081 (R;US)
Microhardness
Development of ferritic steels for fast induced-radioactivity decay, 11:31063 (RA;US)
Microstructure
Development of ferritic steels for fast induced-radioactivity decay, 11:31063 (RA;US)
Microstructural examination of several commercial alloys neutron irradiated to 100 dpa, 11:31034 (RA;US)
Optimization
Design of tough ferritic steels for cryogenic use, 11:30100 (R;US)
Physical Radiation Effects
Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22} n/cm^2, 11:31060 (RA;US)
Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects, 11:31061 (RA;US)
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb ferritic steel, 11:30087 (R;US)
Microstructural examination of several commercial alloys neutron irradiated to 100 dpa, 11:31034 (RA;US)
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)

FERROUS COMPOUNDS
See IRON COMPOUNDS

FERTILIZATION
Efficiency
Fertilization with peat and wood ashes - effects on biomass production, nutrient balance and uptake of heavy metals, 11:29547 (R;SE;In Swedish)

FERTILIZERS
Demonstration Programs
New developments in fertilizer technology, 11:30688 (R;US)
Test-demonstration in northern New Mexico. Progress report, 11:30687 (R;US)
Research Programs
National Fertilizer Development Center progress 84, 11:30686 (R;US)

FFTF REACTOR
Westinghouse Hanford Company, Richland, Washington
Irradiation Procedures
Test matrices for irradiation of Path A Prime Candidate and developmental alloys in FFTF, 11:31046 (RA;US)
Neutron Flux
FFTF fusion irradiations - FFTF cycles 4-6, 11:31045 (RA;US)
Test matrices for irradiation of Path A Prime Candidate and developmental alloys in FFTF, 11:31046 (RA;US)

FIELD PRODUCTION EQUIPMENT
Cost
Costs and indices for domestic oil and gas field equipment and production operations, 1985, 11:29245 (R;US)

FIELDS (ELECTROMAGNETIC)
See ELECTROMAGNETIC FIELDS

FIELDS (MAGNETIC)
See MAGNETIC FIELDS

FILTERS
See also FABRIC FILTERS
MECHANICAL FILTERS
Operation
Operational experiences of non-precoated type filters (super fine filter) in PWR and BWR nuclear power plants, 11:29812 (RA;US)
Optimization
Low-pass filters for signal averaging, 11:30399 (J;US)
Performance
Low-pass filters for signal averaging, 11:30399 (J;US)

FINLAND
Information Systems
National energy information system for Finland, 11:29917 (R;FI;In Finnish)
Wood Fuels
Utilization of chipwood in Lapland. Prehandling, 11:29491 (R;FI;In Finnish)

FIRST WALL
Design
First wall and blanket design for a high wall loading compact tokamak power reactor, 11:31151 (J;US)
Elasticity
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)
Gas Production Rates
Neutronics scaling in fusion test devices, 11:31156 (J;US)
Materials Testing
Vanadium alloys for fusion reactor first wall application, 11:30089 (R;US)
Neutronic Damage Functions
Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments, 11:31043 (RA;US)
Physical Radiation Effects
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)

Neutronics scaling in fusion test devices, 11:31156 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)
Plasticity
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)
Scaling Laws
Neutronics scaling in fusion test devices, 11:31156 (J;US)
Stress Analysis
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)
Temperature Effects
Neutronics scaling in fusion test devices, 11:31156 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)

FISHES
See also ANADROMOUS FISHES
TROUT
Radionuclide Kinetics
Experimental investigation of cobalt-60 accumulation and elimination in Cyprinus carpio (L.), 11:30690 (R;FR;In French)

FISHING INDUSTRY
Energy Consumption
Industrial sector end use. Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume II. Part 1. Documentation of results. Final report, 11:29979 (R;US)

FISSION
Evaluated Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Experimental Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Theoretical Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)

FISSION FRAGMENTS
Angular Momentum
Angular momentum partition in heavy ion induced fission and the effects of shells on gamma-ray multiplicities, 11:30914 (R;AU)

FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Environmental Transport
Assessment of the dispersion of fission products in the atmosphere following a reactor accident under meteorological conditions of low wind speeds with or without high temporal and spatial variability in wind speed and direction, 11:30559 (R;FR)

FISSION PRODUCTS
Beta Decay
Attempt for revision of JNDC FP Decay Data File, 11:30913 (R;JP)
Containment Systems
Fission gas detection system, 11:29875 (P;US)
Energy-Level Transitions
Attempt for revision of JNDC FP Decay Data File, 11:30913 (R;JP)
Mechanical Filters
Fission gas detection system, 11:29875 (P;US)
Nuclear Data Collections
Attempt for revision of JNDC FP Decay Data File, 11:30913 (R;JP)

FLAME PROPAGATION
Mathematical Models
Prediction of heat release effects on a mixing layer, 11:30327 (BA;US)
Turbulence
Experimental investigation of the acceleration of deflagration in wake flow, 11:30323 (R;FR)

FLAMES
Heat Transfer
Thermal radiation hazard ranges from large hydrocarbon pool fires, 11:30563 (R;GB)
Turbulence
Intermittency and conditional velocities in premixed conical turbulent flames, 11:30324 (R;US)
Velocity
Intermittency and conditional velocities in premixed conical turbulent flames, 11:30324 (R;US)

FLASKS
See CASES

FLAT MAGNETIC SPECTROMETERS
Performance
CALLIOPE - a large acceptance multiparticle magnetic spectrometer for intermediate energy physics, 11:30490 (J;NL)

FLAT PLATE COLLECTORS
Efficiency
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)
Materials
Solar collectors for building applications, 11:29587 (RA;US)
Operation
Solar collectors for building applications, 11:29587 (RA;US)
Research Programs
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)

FLORIDA
Fuel Consumption
Energy data, 1970-1984, 11:29920 (R;US)
Renewable Energy Sources
Energy data, 1970-1984, 11:29920 (R;US)

FLOTATION
Reagents
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Yields
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)

FLOW BLOCKAGE
Experimental investigation of the effect of clad ballooning on the effectiveness of PWR emergency cooling, 11:29839 (R;FR)

FLOW (FLUID)
See FLUID FLOW

FLOWMETERS
Acoustic Measurements
Sidetone generator flowmeter, 11:30502 (P;US)
Design
Sidetone generator flowmeter, 11:30502 (P;US)

FLUE GAS
Cleaning
Conditioning of power station flue gases to improve electrostatic precipitator efficiency, 11:29702 (RA;US)
Pilot-scale study of a new method of flue-gas conditioning with ammonium sulfate, 11:29703 (RA;US)
Desulfurization
Design and operation of the baghouse at Holcomb Station, Unit No. 1, 11:29732 (RA;US)
Experience from wet/dry desulfurization in Sweden, 11:29197 (R;SE)
Flue gas desulphurization and NO/sub x/ reduction, 11:29196 (R;SE)
Modeling of SO_2 removal in spray-dryer flue-gas desulfurization system, 11:29193 (RA;US)
Novel design concepts for an 860 MW fabric filter used with a dry flue gas desulfurization system, 11:29730 (RA;US)

Start-up and operating experience with a reverse air fabric filter as part of the University of Minnesota dry FGD system, 11:29194 (RA;US)
Heat Recovery
Comparison of dry injection systems at normal and high flue gas temperatures, 11:29195 (RA;US)
Director fired absorption machine flue gas recuperator, 11:30030 (P;US)
FLUID FLOW

$F + H_2$ potential energy surface: the ecstasy and the agony, 11:30215 (J;US)
Quantitative Chemical Analysis
Fluorine in Colorado oil shale, 11:29276 (BA;US)
FLUORINE 18
Radiochemistry
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
FLUORINE BROMIDES
See BROMINE FLUORIDES
FLUORINE COMPOUNDS
Molecular Structure
Ab initio molecular orbital calculation and semiempirical analysis of the vibrational frequencies and force constants of ONF and FON, 11:30211 (J;US)
Normal-Mode Analysis
Ab initio molecular orbital calculation and semiempirical analysis of the vibrational frequencies and force constants of ONF and FON, 11:30211 (J;US)
FLUORINE FLUORIDES
See FLUORINE
FLUOROURACILS
Chemical Preparation
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
FLUX DENSITY
Use in coordination with the flux considered, e.g. MAGNETIC FLUX, NEUTRON FLUX, etc.
Biological Effects
Effects of quantum flux density of photosynthesis and chloroplast ultrastructure in tissue-cultured plantlets and seedlings of Liquidambar styraciflua L. towards improved acclimatization and field survival, 11:30679 (J;US)
FLY ASH
Air Pollution Control
Analysis of error in precipitator performance estimates, 11:29697 (RA;US)
Precipitator performance enhancement with pulsed energization, 11:29714 (RA;US)
Technical evaluation of plate spacing effects on fly ash collection in precipitators, 11:29717 (RA;US)
Test results of a precipitator operating at high-temperature and high-pressure conditions, 11:29686 (RA;US)
Chemical Composition
Influence of carbonaceous particles on the interaction of coal combustion stack ash with organic matter, 11:29185 (J;US)
Method for predicting the effective volume resistivity of a sodium depleted fly ash layer, 11:29722 (RA;US)
Study of the conditions of formation and emission of trace element pollutants from the combustion of coal in industrial fires, 11:29199 (R;XE)
Fractionation
Influence of carbonaceous particles on the interaction of coal combustion stack ash with organic matter, 11:29185 (J;US)

Leaching
Study of the conditions of formation and emission of trace element pollutants from the combustion of coal in industrial fires, 11:29199 (R;XE)
Materials Handling
Design considerations to avoid common fly ash conveying problems, 11:29740 (RA;US)
Particle Size
Aerosol formation from pulverized coal combustion. Final technical report, 11:29186 (R;US)
FOAMS
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)

FOSSIL-FUEL POWER PLANTS
Air Pollution
Acid smut emission problems associated with Tufts Cove Generating Station, 11:29683 (RA;US)
Carbon particulate reduction evaluation for oil-fired utility boilers, 11:29684 (RA;US)
NO/sub x/ control efforts increase, 11:30624 (RA;US)
Air Pollution Abatement
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 11:29214 (J;US)
Air Pollution Control
Coal power plant in Japan, especially in EPDC's case with advanced combustion and cleaning technique, 11:29678 (R;SE)
Optimizing the collector sections of multi-stage electrostatic precipitators, 11:29712 (RA;US)
Coal Preparation
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 11:29214 (J;US)
Cost
Historical plant cost and annual production expenses for selected electric plants, 1984, 11:29944 (R;US)

Environmental Effects
Assessing environmental effects of oil-fuelled energy systems, 11:30527 (R;IT)
Fuel Oils
Experience in switching to heavier fuel oils, 11:29240 (RA;US)
Overview of EPRI residual fuel oil combustion project plans, 11:29241 (RA;US)
Overview of EPRI residual fuel oil quality criteria project plan, 11:29674 (RA;US)
Fuels
Controlling compatibility of residual fuel oils, 11:29239 (RA;US)
Materials
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Materials Testing
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Operating Cost
Historical plant cost and annual production expenses for selected electric plants, 1984, 11:29944 (R;US)
Quality Control
Controlling compatibility of residual fuel oils, 11:29239 (RA;US)
Research Programs
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

FRACTURE MECHANICS
Some novel concepts in fracture mechanics, 11:30359 (J;IN)
Computerized Simulation
Analysis of triaxial testing using a fracture damage model, 11:30386 (R;US)

FRACTURED FORMATIONS
See FRACTURED RESERVOIRS

FRACTURED RESERVOIRS
Fluid Flow
Multiple-porosity method for simulation of naturally fractured petroleum reservoirs, 11:29235 (R;US)
Rock-Fluid Interactions
Geological and geochemical techniques for fracture definition in geothermal reservoirs, 11:29640 (RA;US)
Simulation
Multiple-porosity method for simulation of naturally fractured petroleum reservoirs, 11:29235 (R;US)

FRACTURING FLUIDS
Transport
Quasi-static and dynamic arbitrary fracture propagation in jointed rock, 11:29252 (R;US)

FRAGMENTS (FALLOUT)
See FALLOUT

FRAGMENTS (FISSION)
See FISSION FRAGMENTS

FRAGMENTS (PARTICLES)
See PARTICLES

FRANCE
Energy Policy
France - energy situation 1984, 11:29926 (R;DE;In German)
Energy Supplies
France - energy situation 1984, 11:29926 (R;DE;In German)
Research Programs
French study and research program on water cooled reactor safety, 11:29757 (R;FR;In French)
Seasonal Thermal Energy Storage
STES newsletter: a quarterly review of seasonal thermal energy storage, 11:29988 (J;US)
Service Sector
Electricity in the service sector of France, 11:29953 (RA;US)

FRANCIUM 211
High Spin States
Spectroscopy of high spin states in sup(211,212,213)Fr, 11:30922 (R;AU)

FRANCIUM 212
High Spin States
Spectroscopy of high spin states in sup(211,212,213)Fr, 11:30922 (R;AU)

FRANCIUM 213
High Spin States
Spectroscopy of high spin states in sup(211,212,213)Fr, 11:30922 (R;AU)

FREE ELECTRON LASERS
Electromagnetic Radiation
Comparative study of free electron laser experiments in longitudinal and transverse wiggler geometries, 11:31070 (RA;JP)
Gain
Gain physics of rf-linac-driven xuv free-electron lasers, 11:30363 (R;US)
Mathematical Models
Transverse correlations in start-up of a free electron laser from noise, 11:30361 (R;US)
Research Programs
Evolution of free-electron laser development, 11:30362 (R;US)
Uses
Evolution of free-electron laser development, 11:30362 (R;US)

FREE RADICALS
See RADICALS

FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

FTR REACTOR (RICHLAND)
See FFTF REACTOR

FUEL ADDITIVES
Ignition Quality
Practical properties of alcohol mixtures containing ignition improver when used as a fuel in diesel engines, 11:30037 (R;FI;In Finnish)

FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Design
Fuel assembly for the production of tritium in light water reactors, 11:29755 (P;US)
Ducts
Mechanically attached load pad for liquid metal nuclear reactor fuel assemblies, 11:29782 (P;US)
Fluid Flow
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume I. Equations and numerics, 11:29800 (R;US)
Fuel Racks
Mechanically attached load pad for liquid metal nuclear reactor fuel assemblies, 11:29782 (P;US)
Heat Transfer
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume I. Equations and numerics, 11:29800 (R;US)
Impact Strength
Structural analysis of PWR fuel assemblies in LOCA and seismic conditions, 11:29770 (R;FR)
Post-Irradiation Examination
Field tests and examinations in cell of French fuel assemblies, 11:29758 (R;FR;In French)

FUEL BUNDLES
See FUEL ELEMENT CLUSTERS

FUEL CANS
Shape
Assessment of the use of half-square cans on the management of spent fuel, 11:29301 (R;US)
Weldability
Welding of sule elements for nuclear reactors with solid state YAG laser using instrumentated testing equipments, 11:30075 (R;FR;In French)

FUEL CELLS
Anodes
Fuel cell having dual electrode anode or cathode, 11:29904 (P;US)
Cathodes
Fuel cell having dual electrode anode or cathode, 11:29904 (P;US)

Design
Fuel cell having dual electrode anode or cathode, 11:29904 (P;US)
Electrochemistry
Fuel cell having dual electrode anode or cathode, 11:29904 (P;US)
FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE
FUEL ELEMENT CLUSTERS
Flow Blockage
Experimental investigation of the effect of clad ballooning on the effectiveness of PWR emergency cooling, 11:29839 (R;FR)
FUEL ELEMENTS
See also ANNULAR FUEL ELEMENTS
FUEL PINS
FUEL RODS
SPENT FUEL ELEMENTS
Corrosion
High resolution in situ ultrasonic corrosion monitor, 11:29807 (P;US)
Rail Transport
TMI-2 spent fuel shipping, 11:29297 (RA;US)
FUEL GAS
See also HIGH BTU GAS
NATURAL GAS
Cleaning
Combined cycle process with integrated gasification VEW-Coal Conversion Process, 11:29679 (R;SE)
Combustion
Combined cycle process with integrated gasification VEW-Coal Conversion Process, 11:29679 (R;SE)
FUEL INJECTION SYSTEMS
Nozzles
Alcohol as a fuel in a high speed diesel engine with double injection system, 11:30041 (R;FI;In Finnish)
FUEL OILS
Chemical Properties
Overview of EPRI residual fuel oil quality criteria project plan, 11:29674 (RA;US)
Combustion Properties
Carbon particulate reduction evaluation for oil-fired utility boilers, 11:29684 (RA;US)
Physical Properties
Overview of EPRI residual fuel oil quality criteria project plan, 11:29674 (RA;US)
FUEL PENCILS
See FUEL PINS
FUEL PINS
Head End Processes
Head-end and solvent extraction studies using fast-flux test facility fuel, 11:29292 (R;US)
Loading
Funnel for fuel pin loading system, 11:29808 (P;US)
Remote Handling
Funnel for fuel pin loading system, 11:29808 (P;US)
FUEL RACKS
Design
Mechanically attached load pad for liquid metal nuclear reactor fuel assemblies, 11:29782 (P;US)
FUEL REPROCESSING PLANTS
Liquid Wastes
Solidification of enriched tritium from reprocessing, 11:29402 (R;DE;In German)
FUEL ROD CONSOLIDATION
See FUEL RACKS
FUEL RODS
After-Heat Removal
Air coolability of TRIGA reactors following a loss-of-coolant accident, 11:29864 (R;US)
Fabrication
Fabrication and loading of fuel rods for the Light Water Breeder Reactor (LWBR Development Program), 11:29781 (R;US)
Failed Element Detection
Fission gas detection system, 11:29875 (P;US)
Fission Products
Fission gas detection system, 11:29875 (P;US)
Heat Transfer
Air coolability of TRIGA reactors following a loss-of-coolant accident, 11:29864 (R;US)
Research program: the investigation of heat transfer and fluid flow at low pressure, 11:29863 (R;US)
Hydraulics
Research program: the investigation of heat transfer and fluid flow at low pressure, 11:29863 (R;US)
Loading
Fabrication and loading of fuel rods for the Light Water Breeder Reactor (LWBR Development Program), 11:29781 (R;US)
FUEL SHEATHS
See FUEL CANS
FUEL SLUGS
See FUEL RODS
FUEL SLURRIES
Additives
Improving the stability of coal slurries. Quarterly and half-yearly report, September 15-December 15, 1985 and September 15, 1985-March 15, 1986, 11:29206 (R;US)
Chemical Composition
Sedimentation of CWM and sediment characterization. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29180 (R;US)
Combustion
Air blast type coal slurry fuel injector, 11:29224 (P;US)
On-Line Measurement Systems
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Research Programs
Sedimentation of CWM and sediment characterization. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29180 (R;US)
Rheology
Polydisperse coal slurry rheology. Quarterly report, 11:29179 (R;US)
Sedimentation of CWM and sediment characterization. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29180 (R;US)
Sedimentation
Sedimentation of CWM and sediment characterization. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29180 (R;US)
Stability
Improving the stability of coal slurries. Quarterly and half-yearly report, September 15-December 15, 1985 and September 15, 1985-March 15, 1986, 11:29206 (R;US)
Viscosity
Polydisperse coal slurry rheology. Quarterly report, 11:29179 (R;US)
Yield Strength
Sedimentation of CWM and sediment characterization. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29180 (R;US)
FUEL SUPPLIES
Mathematical Models
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
FUEL SUSPENSIONS

G

G CODES
Automated sensitivity analysis using the GRESS language, 11:30741 (R;US)
GADOLINIUM 153
Electron Capture Decay
On the electron capture decay energies of ^{153}Gd and ^{178}Hf, 11:30917 (R;AU)
Ion Exchange
Use of high-pressure ion exchange for the production of gadolinium-153. Status report, 11:30314 (R;US)
Production
Use of high-pressure ion exchange for the production of gadolinium-153. Status report, 11:30314 (R;US)
GAGES (STRAIN)
See STRAIN GAGES
GALACTIC EVOLUTION
Infrared search for primeval galaxies, 11:30801 (RA;GB)
Cosmological Models
Galaxy formation theory and large scale structure in the universe, 11:30775 (RA;JP)
Scenarios of galaxy formation, 11:30774 (RA;JP)
GALAXIES
See also MILKY WAY
SEYFERT GALAXIES
Age Estimation
Near infrared study of Virgo dwarf ellipticals, 11:30795 (RA;GB)
Color
Infrared photometric properties of the average galaxy, 11:30794 (RA;GB)
Information Systems
Infrared maps of M81: an example of the IRAS Close Galaxy Programme, 11:30798 (RA;GB)
Infrared Spectra
Cosmological results from IRAS, 11:30804 (RA;GB)
Extragalactic Infrared Astronomy, 11:30790 (R;GB)
Infrared emission and extragalactic starbursts, 11:30797 (RA;GB)
Infrared maps of M81: an example of the IRAS Close Galaxy Programme, 11:30798 (RA;GB)
Infrared photometric properties of the average galaxy, 11:30794 (RA;GB)
Infrared search for primeval galaxies, 11:30801 (RA;GB)
Near infrared imaging of galaxies, 11:30793 (RA;GB)
Near infrared study of Virgo dwarf ellipticals, 11:30795 (RA;GB)
Starbursts in non-interacting galaxies, 11:30792 (RA;GB)
Luminosity
Infrared photometric properties of the average galaxy, 11:30794 (RA;GB)
Infrared search for primeval galaxies, 11:30801 (RA;GB)
Nonluminous Matter
Probing the structure of the galactic halo with gamma rays produced by WIMP annihilations, 11:30764 (R;US)
Star Evolution
Infrared emission and extragalactic starbursts, 11:30797 (RA;GB)
Starbursts in non-interacting galaxies, 11:30792 (RA;GB)
GALAXY CLUSTERS
Infrared Spectra
Near infrared study of Virgo dwarf ellipticals, 11:30795 (RA;GB)
Sunyaev-Zeldovich effect at 1.15 mm wavelength, 11:30802 (RA;GB)
GALAXY NUCLEI
Central part of galaxies.
Infrared Spectra
Infrared emission from active nuclei, 11:30799 (RA;GB)
GALLIUM ARSENIDE SOLAR CELLS
Chemical Vapor Deposition
Experience with OMCVD production of GaAs solar cells, 11:29528 (RA;US)
Crystal Defects
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)
Crystal Growth
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)
Design
N/P GaAs concentrator solar cells with an improved grid and bushbar contact design, 11:29520 (RA;US)
Efficiency
Evaluation of AlsubxGasub1-xsubAs solar cells, 11:29522 (RA;US)
GaAsP on GaP top solar cells, 11:29523 (RA;US)
Gallium arsenide solar cell efficiency: problems and potential, 11:29519 (RA;US)
High-efficiency AlGaAs-GaAs Cassegrainian concentrator cells, 11:29521 (RA;US)
N/P GaAs concentrator solar cells with an improved grid and bushbar contact design, 11:29520 (RA;US)
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)
Possible radiation-resistant solar cell geometry using superlattices, 11:29527 (RA;US)
Fabrication
Evaluation of AlsubxGasub1-xsubAs solar cells, 11:29522 (RA;US)
Photovoltaic concentrator research status, 11:29611 (BA;US)
Status of photovoltaics R & D at SERI, 11:29548 (BA;US)
Oxidation
GaAsP on GaP top solar cells, 11:29523 (RA;US)
Performance
Two years of on-orbit gallium arsenide performance from the LIPS solar cell panel experiment, 11:29537 (RA;US)
Performance Testing
Mechanically-stacked multijunction solar cells, 11:29555 (BA;US)
Physical Radiation Effects
Depletion layer recombination effects on the radiation damage hardness of gallium arsenide cells, 11:29535 (RA;US)

DLTS analysis of radiation-induced defects in one-MeV electron irradiated germanium and Alsub0.17Gasub0.83As solar cells, 11:29534 (RA;US)
Performance of Hughes GaAs concentrator cells under 1-MeV electron irradiation, 11:29536 (RA;US)
Space Environment Workshop, 11:29544 (RA;US)
Testing of gallium arsenide solar cells on the CRRES vehicle, 11:29539 (RA;US)
Radiosensitivity
N/P GaAs concentrator solar cells with an improved grid and bushbar contact design, 11:29520 (RA;US)
Possible radiation-resistant solar cell geometry using superlattices, 11:29527 (RA;US)
Recombination
Depletion layer recombination effects on the radiation damage hardness of gallium arsenide cells, 11:29535 (RA;US)
Reflectivity
Optical effects of thin film adhesives in multijunction solar cells, 11:29549 (BA;US)
Research Programs
Cell research and technology workshop, 11:29543 (RA;US)
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)
Specifications
Testing of gallium arsenide solar cells on the CRRES vehicle, 11:29539 (RA;US)
Superlattices
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)
Possible radiation-resistant solar cell geometry using superlattices, 11:29527 (RA;US)
Temperature Effects
Thermal stress cycling of GaAs solar cells, 11:29540 (RA;US)
Thermal Cycling
Thermal stress cycling of GaAs solar cells, 11:29540 (RA;US)
Thermal Degradation
Testing of gallium arsenide solar cells on the CRRES vehicle, 11:29539 (RA;US)

GALLIUM ARSENIDES
Carrier Lifetime
Comparison of Auger recombination in GaInAs-AlInAs multiple quantum well structure and in bulk GaInAs, 11:30156 (RA;AT)
Chemical Vapor Deposition
Vacuum MOCVD fabrication of high efficience cells, 11:29524 (RA;US)
Chlorination
Thermal and ion-assisted reactions of Al/sub 0.3/Ga/sub 0.7/As with molecular chlorine, 11:30161 (R;US)
Crystal Defects
EL2 and related defects in GaAs - challenges and pitfalls, 11:29553 (BA;US)
Dislocations
Dislocation reduction in epitaxial GaAs on Si (100), 11:30165 (J;US)
Efficiency
Vacuum MOCVD fabrication of high efficience cells, 11:29524 (RA;US)
Electronic Structure
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Energy Gap
EL2 and related defects in GaAs - challenges and pitfalls, 11:29553 (BA;US)
Impurities
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Photoconductivity
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Scattering
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Superlattices
Dislocation reduction in epitaxial GaAs on Si (100), 11:30165 (J;US)

GALLIUM PHOSPHIDE SOLAR CELLS
Crystal Defects
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)
Crystal Growth
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)
Efficiency
GaAsP on GaP top solar cells, 11:29523 (RA;US)
Fabrication
Status of photovoltaics R & D at SERI, 11:29548 (BA;US)
Oxidation
GaAsP on GaP top solar cells, 11:29523 (RA;US)
Superlattices
Control of superlattice morphology in GaAs sub1-subxPsubx cascade cells, 11:29525 (RA;US)

GALLIUM PHOSPHIDES
Electronic Structure
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Impurities
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Photoconductivity
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)
Scattering
Neutral impurity scattering in AlGaAs, 11:30166 (J;US)

GAMMA DETECTION
High range gamma radiation meter, 11:30434 (J;US)
Data Acquisition Systems
A sophisticated gamma-ray data acquisition system based on an IBM PC/XT computer, 11:30437 (J;US)
Semiconductor Detectors
A solid state directional gamma detector, 11:30433 (J;US)

GAMMA DOSIMETRY
Proportional Counters
A new type of REM measuring instrument, 11:30440 (J;US)
Tissue-Equivalent Detectors
A new type of REM measuring instrument, 11:30440 (J;US)

GAS BEARINGS
Mechanical Vibrations
Vibration damping in externally pressurized gas bearings, 11:30353 (R;US)

Technology Transfer
Federal geothermal technology transfer activities, 11:29626 (RA;US)
Technology transfer on the heber geothermal binary demonstration power plant project, 11:29625 (RA;US)
Tracer Techniques
Development and application of tracers: examples of field and experimental studies, 11:29620 (RA;US)
GEOTHERMAL FLUIDS
Heat Transfer
Convective heat flow probe, 11:29624 (P;US)
GEOTHERMAL INDUSTRY
Economic Analysis
Status of US geothermal industry, 11:29613 (RA;US)
Socio-Economic Factors
Status of US geothermal industry, 11:29613 (RA;US)
GEOTHERMAL POWER PLANTS
Demonstration Plants
Heber binary project, 11:29627 (RA;US)
Design
Heber binary project, 11:29627 (RA;US)
GEOTHERMAL RESOURCES
Ground Water
Summary of the geothermal prospects for the United Kingdom. Final report of the British Geological Survey's Geomthermal Energy Programme 1979-1984, 11:29616 (R;GB)
Hot-Dry-Rock Systems
Summary of the geothermal prospects for the United Kingdom. Final report of the British Geological Survey's Geomthermal Energy Programme 1979-1984, 11:29616 (R;GB)
Research Programs
Geothermal reservoir technology, 11:29614 (RA;US)
GEOTHERMAL WELLS
Research Programs
Open hole packer and running procedure for Hot Dry Rock reservoir testing, 11:29633 (RA;US)
Temperature Logging
Convective heat flow probe, 11:29624 (P;US)
Testing
Sweet Lake geopressured-geothermal project, Magma Gulf-Technadril/DOE Amoco fee. Volume III. Final report. Annual report, February 1982-March 1985, 11:29638 (R;US)
Well Logging Equipment
Use of an acoustic borehole televiewer to investigate casing corrosion in geothermal wells, 11:29623 (R;US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMANIUM
Physical Radiation Effects
DLTS analysis of radiation-induced defects in one-MeV electron irradiated germanium and Alsub0.17Gasub0.83As solar cells, 11:29534 (RA;US)

GERMANIUM 76 TARGET
Krypton 86 Reactions
Study of transitional Erbium nuclei (N=86) at very high spin. Highlight of dipolar transitions and medium lifetimes in the continuum, 11:30909 (R;FR;In French)
GERMANIUM ALLOYS
Formation Free Enthalpy
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Lattice Parameters
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Order Parameters
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Stability
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GIANT RESONANCE
Spin Flip
Can we learn about the spin flip giant dipole resonances with pions?, 11:30940 (BA;US)
GIBBSITE
Precipitation
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
GLASS
See also BOROSILICATE GLASS
Absorption Spectroscopy
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Chemical Composition
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Chemical Preparation
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Crack Propagation
Microscopic image analysis of slow crack growth in vitreous materials, 11:30388 (R;US)
Fabrication
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Gravimetric Analysis
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
Leaching
Leach testing of waste glasses under near-saturation conditions, 11:29429 (J;US)
Solution chemistry of silicate and borate materials, 11:30163 (R;US)
Microwave Heating
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Optical Properties
A cerium glass fiber-optic active target for high energy physics experiments, 11:30474 (J;US)
Properties of new scintillation glasses and scintillating fibers, 11:30473 (J;US)
Thermal Diffusion
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Thermal Expansion
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
Thermodynamic Properties
Pressurized heat treatment of glass-ceramic to control thermal expansion, 11:30127 (P;US)
X-Ray Fluorescence Analysis
Analysis of S-glass ceramic lot No. 84-132 for use as a standard reference material, 11:30164 (R;US)
GLASS MELTERS
See CERAMIC MELTERS
GLAUBER'S SALT
See SODIUM SULFATES
GLOVEBOXES
Glove box operations for transplutonium element production, 11:30336 (R;US)
Surface Contamination
Surface tritium contamination studies, 11:29437 (RA;US)
GLUEBALLS
Particle Production
Gluonium candidates from hadronic and e^+e^- interactions, 11:30845 (R;US)
GLUONIUM
See GLUEBALLS
GLUTAMIC ACID
Chemical Preparation
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
GLUTATHIONE
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:30729 (J;NL)
GLYCOLIPIDS
Biosynthesis
Microbial biosurfactant - physiology, biochemistry, and applications, 11:29247 (J;US)
Chemical Composition
Microbial biosurfactant - physiology, biochemistry, and applications, 11:29247 (J;US)
GLYCOLS
See also PINACOL
POLYETHYLENE GLYCOLS
Membrane Transport
Abscisic acid accumulation in spinach leaf slices in the presence of penetrating and nonpenetrating solutes, 11:30682 (J;US)
GNEISSES
Geologic Fractures
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
Lithology
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
GOBAR GAS
See METHANE
GOLD COMPOUNDS
Crystal Structure
Structure of trichloro(diethylenetriamine)gold(II), Au(dien)Cl_3, determined by single-crystal x-ray diffraction, Raman, and EXAFS spectroscopies: an EXAFS caveat, 11:30254 (J;US)
GRAMINEAE
See GRASS
GRAND UNIFIED THEORY
Baryon Number
Proton decay: theory versus experiment, 11:30877 (R;AT)
Chiral Symmetry
Mass hierarchies of quarks and leptons in a supersymmetric SP(2N) subcolor theory, 11:30864 (R;JP)
Renormalization
Grand unification mass scale and proton life time in SO(10) model, 11:30883 (RA;JP)
SO-10 Groups
Grand unification mass scale and proton life time in SO(10) model, 11:30883 (RA;JP)
Proton decay in grand unified theories, 11:30868 (RA;JP)
SU-5 Groups
Proton decay in grand unified theories, 11:30868 (RA;JP)
Supersymmetry
Mass of superpartners in SGUT, 11:30884 (RA;JP)
GRANITES
See also APLITES
GRANODIORITES

PEGMATITES
Deformation
Inelastic deformations of fault and shear zones in granitic rock, 11:30757 (R;US)
Elasticity
Spent Fuel Test-Climax mineby revisited, 11:29418 (R;US)
Geologic Fractures
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
Lithology
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
Mineralogy
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)
Petrogenesis
Thermally induced chemical migration: a natural analog approach. [Technical progress report], 11:30759 (R;US)
Rock Mechanics
Inelastic deformations of fault and shear zones in granitic rock, 11:30757 (R;US)
Thermomechanical modeling of the Spent Fuel Test-Climax (NNWSI project), 11:30756 (R;US)
Stresses
Spent Fuel Test-Climax mineby revisited, 11:29418 (R;US)
Thermomechanical modeling of the Spent Fuel Test-Climax (NNWSI project), 11:30756 (R;US)
Temperature Effects
Thermomechanical modeling of the Spent Fuel Test-Climax (NNWSI project), 11:30756 (R;US)
Tunneling
Spent Fuel Test-Climax mineby revisited, 11:29418 (R;US)
GRANODIORITES
Geologic Fractures
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
Lithology
Geological survey of the Lac du Bonnet Batholith, Manitoba, 11:29310 (R;CA)
GRANULAR BED FILTERS
Performance Testing
Evaluation and development of candidate high temperature filter devices for pressurized fluidized bed combustion, 11:29687 (RA;US)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Flow Models
Model for the flow of particulate matter with application to chutes. Quarterly technical report, December 1, 1985-February 28, 1986, 11:29205 (R;US)
GRAPHITE
Mechanical Properties
Investigation of the strength of H440 graphite when subjected to combined primary and secondary stress, 11:30162 (R;US)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRASS
Contamination
Behavior of ^{137}Cs-tagged particles in a fescue meadow, 11:30701 (BA;XA)
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)
Radionuclide Kinetics
Behavior of ^{137}Cs-tagged particles in a fescue meadow, 11:30701 (BA;XA)
GRAVITATION
Symmetry Breaking
Universe created from 'nothing' as a broken symmetry theory of gravity, 11:30769 (R;XA)
GREAT BRITAIN
See UNITED KINGDOM
GREAT LAKES REGION
See FEDERAL REGION V
GREAT PLAINS
Air Quality
A case study of the effects of local and distant sources of alkaline material on precipitation in the midwest and plains, 11:30550 (J;US)
GREEN OIL
See SHALE OIL FRACTIONS
GREEN RIVER FORMATION
See also MAHOGANY ZONE
UINTA FORMATION
Geochemical Surveys
Fluorine in Colorado oil shale, 11:29276 (BA;US)
Oil Shale Deposits
Fluorine in Colorado oil shale, 11:29276 (BA;US)
Initial results of Green River Oil Shale Processing using the University of Utah's pilot scale bottom burning retort, 11:29269 (BA;US)
GROUND DISPOSAL
Design
Subsurface moisture regimes and tracer movement under two types of trench-cap designs for shallow land burial sites, 11:29403 (R;US)
Technology development for the design of waste repositories at arid sites: field studies of biointrusion and capillary barriers, 11:29404 (R;US)
GROUND SOURCE HEAT PUMPS
Field Tests
Residential earth-coupled heat pump demonstration. Final report, 11:30014 (R;US)
Performance
Residential earth-coupled heat pump demonstration. Final report, 11:30014 (R;US)
GROUND WATER
Chemical Composition
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Monitoring
Underground coal gasification: environmental update, 11:29171 (B;US)
Radiation Monitoring
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
Radioactivity
Characterization and anion exchange removal of uranium from Hanford ground water, 11:30616 (R;US)
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
Radionuclide Migration
Distribution of plutonium and americium beneath a 33-year-old liquid waste disposal site, 11:30618 (J;US)
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)
Rock-Fluid Interactions
Permeability and pore-fluid chemistry of the Bullfrog Tuff in a temperature gradient: summary of results, 11:30761 (R;US)
Sampling
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROUTING
Chemical Composition
Operational and long-term performance assessment for Hanford grout, 11:29379 (RA;US)
Performance Testing
Operational and long-term performance assessment for Hanford grout, 11:29379 (RA;US)
GUANIDYLAMINOVALERIC ACID
See ARGININE
GUATEMALA
Resource Development
Geothermal activities in Central America, 11:29981 (RA;US)

GULF COAST
Climates
Energy conservation and its implication for architectural design and town planning in the hot-arid areas of Saudi Arabia and the US Gulf States, 11:29589 (RA;US)

H

H2 REGIONS
Far Infrared Radiation
Star formation in the inner galaxy: a far-infrared and radio study of two H2 regions, 11:30784 (R;US)
Maps
Star formation in the inner galaxy: a far-infrared and radio study of two H2 regions, 11:30784 (R;US)
Radiowave Radiation
Star formation in the inner galaxy: a far-infrared and radio study of two H2 regions, 11:30784 (R;US)
HABITAT
Mitigation
Ural-Tweed bighorn sheep - wildlife mitigation project. Annual report, 1 September 1984-31 December 1985, 11:30590 (R;US)
Remote Sensing
Feasibility study of wood stork foraging habitat mapping using landsat multispectral data, 11:30595 (R;US)
HADRON REACTIONS
Historical Aspects
Reflection of the classical age in the intermediate energy physics, 11:30934 (R;JP)
HADRONS
Particle Structure
On the hadron as a microuniverse, 11:30862 (R;XA)
HAFNATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
HAFNIUM 175
Electron Capture Decay
On the electron capture decay energies of ^{153}Gd and ^{175}Hf, 11:30917 (R;AU)
HAFNIUM 178
Radioisotope Generators
Development of tungsten-tantalum generator. Final report, 11:30310 (R;US)
HALL GENERATORS
See MHD GENERATORS
HANDLING (WASTES)
See WASTE MANAGEMENT
HANFORD RESERVATION
Basalt
State of in situ stresses determined by hydraulic fracturing at the Hanford Site, 11:29415 (R;US)
High-Level Radioactive Wastes
Slurry growth: the characterization of a unique phenomenon at the Hanford Site, 11:29394 (RA;US)
Hydrology
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
Mountains
Structure and evolution of the Horse Heaven Hills in South-Central Washington, 11:29414 (R;US)
Radioactive Waste Management
Waste management practices to control biological transport of radioactivity at the Hanford Site, 11:29434 (RA;US)
Radioactivity
Characterization and anion exchange removal of uranium from Hanford ground water, 11:30616 (R;US)
Water Quality
Results of the separations area ground-water monitoring network for 1984, 11:30617 (R;US)
Water Tables
Hanford site water table changes 1950-1980: data observations and evaluation, 11:30604 (R;US)
HARD COAL
See BLACK COAL
HARTREE-FOCK-BOGOLYUBOV THEORY
Wave Functions
Microscopic study of the S band in the generator co-ordinate approach, 11:30918 (R;XA)
HARVESTING EQUIPMENT
Cost
Utilization of chipwood in Lapland. Prehandling, 11:29491 (R;FI;In Finnish)
HASTELLOY C-276

Chemical Preparation
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Chemical Reactions
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Crystal Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Energy Transfer
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Excited States
Role of geometric distortion in the quenching behaviors of all-trans 1,4-diphenyl-1,3-butadiene triplet, 11:30279 (J;CH)
Fluorescence
Rotamerism in (2-anthryl)ethylenes. Evidence from fluorescence lifetimes and quenching studies, 11:30276 (J;US)
Isomerization
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Molecular Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Oxidation
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Photochemistry
Role of geometric distortion in the quenching behaviors of all-trans 1,4-diphenyl-1,3-butadiene triplet, 11:30279 (J;CH)
Rotamerism in (2-anthryl)ethylenes. Evidence from fluorescence lifetimes and quenching studies, 11:30276 (J;US)
Photolysis
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Rotation
Rotamerism in (2-anthryl)ethylenes. Evidence from fluorescence lifetimes and quenching studies, 11:30276 (J;US)
HETEROJUNCTIONS
Prior to July 1981, this concept was indexed to SEMICONDUCTOR JUNCTIONS.
Etching
Thermal and ion-assisted reactions of Al/sub 0.3/Ga/sub 0.7/As with molecular chlorine, 11:30161 (R;US)
HEXADECANOIC ACID
Biochemistry
Analysis of photosynthetic antenna function in a mutant of Arabidopsis thaliana (L.) lacking trans-hexadecenoic acid, 11:30630 (J;US)
HEXENES
Configuration
Conformational analysis of 1,4-cyclohexadienes. A shallow boat-shaped 1,4-dihydronaphthalene, 11:30261 (J;US)
Conformational Changes
Conformational analysis of 1,4-cyclohexadienes. A shallow boat-shaped 1,4-dihydronaphthalene, 11:30261 (J;US)
HFR REACTOR
Reactor Vessels
High flux testing reactor Petten. Replacement of the reactor vessel and connected components. Overall report, 11:29820 (R;FR)
Repair
High flux testing reactor Petten. Replacement of the reactor vessel and connected components. Overall report, 11:29820 (R;FR)
HHIRF
See HHIRF ACCELERATOR
HHIRF ACCELERATOR
Modifications
Future directions in intermediate energy heavy ion physics. A proposed expansion of the Holifield Facility, 11:30411 (R;US)

HIGGS BOSONS
Particle Identification
How to search for new particles at anti pp colliders, 11:30847 (BA;US)
Particle Production
New particle searches at e^+e machines, 11:30838 (R;FR)
HIGH ALTITUDE (STRATOSPHERE)
See STRATOSPHERE
HIGH BTU GAS
Over 900 Btu/ft³.
Calorific Value

[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Great Plains Coal Gasification Plant start-up and modification report, 11:29154 (R;US)
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Forecasting
Physics with high energy accelerators in the future, 11:30830 (RA;JP)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY
HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH FLUX REACTOR PETTEN
See HFR REACTOR
HIGH-FREQUENCY HEATING
See also ECR HEATING
ICR HEATING
LOWER HYBRID HEATING
Complex geometric optics theory in an inhomogeneous plasma. Appendix B, 11:30962 (R;US)
Mathematical Models
Theoretical studies of the heating of toroidal plasmas with radiofrequency electromagnetic radiation. Progress report, July 1, 1985-June 30, 1986, 11:30965 (R;US)
HIGH-LEVEL RADIOACTIVE WASTES
Containers
Corrosion studies on HLW steel containers, 11:29316 (R;FR)
Materials Handling
Status of the waste removal system for the West Valley Demonstration Project, 11:29397 (RA;US)
Monitored Retrievable Storage
Simulation of the MRS receiving and handling facility, 11:29423 (BA;US)
Staff evaluation of US Department of Energy proposal for monitored retrievable storage, 11:29300 (R;US)
Packaging
Full scale tests on remote handled FFTF fuel assembly waste handling and packaging, 11:30340 (R;US)
Radioactive Waste Disposal
Heat pipe effects in nuclear waste isolation: a review, 11:29405 (R;US)
Scientific basis for nuclear waste management IX, 11:29420 (B;US)
Radioactive Waste Management
Management of high specific activity tritiated liquid wastes, 11:29407 (RA;US)
Radioactive Waste Processing
Analytical characterization of West Valley high-level waste sludge, 11:29396 (RA;US)
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)
Remote Handling
Full scale tests on remote handled FFTF fuel assembly waste handling and packaging, 11:30340 (R;US)
Solidification
Development of a grout-based stabilization method for spent high-temperature gas-cooled reactor fuel, 11:29380 (RA;US)
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)
Underground Disposal
Preliminary Hanford Waste Vitrification Plant waste form qualification plan, 11:29416 (R;US)
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
Vitrification
Design of a mixing system for simulated high-level nuclear waste melter feed slurries, 11:29410 (R;US)
Operating radioactive liquid-fed ceramic melter system, 11:29411 (R;US)
Preliminary Hanford Waste Vitrification Plant waste form qualification plan, 11:29416 (R;US)
Volume
Slurry growth: the characterization of a unique phenomenon at the Hanford Site, 11:29394 (RA;US)
HIGH-PURITY GE DETECTORS
Design
A new Compton densitometer for measuring pulmonary edema, 11:30665 (J;US)
Performance
High-purity germanium charged-particle detectors: A LBL-IUCF update, 11:30481 (J;NL)
HISTAMINE
Secretion
Test of a theory relating to the cross-linking of IgE antibody on the surface of human basophils, 11:30626 (J;US)
HO2
See HYDROPEROXY RADICALS
HOG FUEL
See WOOD WASTES
HOLIFIELD HEAVY ION RESEARCH FACILITY

HOLLANDITE
Chemical Radiation Effects
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:30306 (J;US)
HOLMIUM 163
M Capture
Measurement of the mass of the electron neutrino using electron capture in ^{163}Ho, 11:30827 (RA;JP)
HOLOGRAPHY
S3T working group. Report 1: group aims (Time-space spectral signature), 11:30976 (R;FR;In French)
HONDURAS
Resource Development
Geothermal activities in Central America, 11:29981 (RA;US)
HONG KONG
Imports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
HOT CELLS
Radiation Monitoring
Stack monitor for the proof-of-breeding project, 11:30431 (J;US)
HOT ENRICHED CARBON MODERATED THERMAL OSC
See HECTOR REACTOR
HOT PLASMA
Ion Drift
Ion diffusion at interfaces in hot plasmas, 11:30983 (R;US)
Spin
Application of polarized ions to fusion reactors, 11:30974 (RA;JP)
HOT-DRY-ROCK SYSTEMS
Exploration
Exploration for Hot Dry Rock geothermal resources in the Midcontinent USA. Volume 1. Introduction, geologic overview, and data acquisition and evaluation, 11:29622 (R;US)

Geothermal Wells
Open hole packer and running procedure for Hot Dry Rock reservoir testing, 11:29633 (RA;US)
Measuring Methods
Inert and reacting tracers for reservoir sizing, 11:29632 (RA;US)
Well Drilling
Hot Dry Rock phase II reservoir engineering, 11:29631 (RA;US)
Well Stimulation
Hot Dry Rock phase II reservoir engineering, 11:29631 (RA;US)

HOUSES
Air Infiltration
Air leakage flow correlations for varying house construction types, 11:30002 (R;US)
Energy Consumption
Monitored performance of new, low-energy homes: updated results from the BECA-A data base, 11:30001 (R;US)
Indoor Air Pollution
Preliminary radon testing results for the Residential Standards Demonstration Program. Program results No. 3, 11:29905 (R;US)
Passive Solar Cooling Systems
Passive solar cooling house at King Faisal University, 11:29574 (RA;US)

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN CELLS
See ANIMAL CELLS

HUMAN FACTORS
Research Programs
Application of SLIM-MAUD: a test of an interactive computer-based method for organizing expert assessment of human performance and reliability. Volume 1. Main report, 11:29853 (R;US)
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)

HUMAN POPULATIONS

HYDROGEN
Activation Energy
$F + H_2$ potential energy surface: the ecstasy and the agony, 11:30215 (J;US)
Adsorption
Dynamics of dissociative adsorption of hydrogen on Ni(100), 11:30216 (J;US)
Separation of a five-component gas mixture by pressure swing adsorption, 11:30183 (J;US)
Atom-Atom Collisions
Reactive and inelastic energy transfer in $H+D_2$ collisions studied by single-collision CARS spectroscopy, 11:30819 (B;US)
Atom-Molecule Collisions
$F + H_2$ potential energy surface: the ecstasy and the agony, 11:30215 (J;US)
Chemical Preparation
Enhanced photoredox chemistry in quantized semiconductor colloids, 11:30289 (J;US)
Chemical Reaction Kinetics
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)
$F + H_2$ potential energy surface: the ecstasy and the agony, 11:30215 (J;US)
Rate constant for the reaction $H + NH_3$ over the temperature range 750-1777 K, 11:30209 (J;US)
Chemical Reaction Yield
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)

Combustion
Hydrogen:air:steam flammability limits and combustion characteristics at intermediate scale, 11:29861 (R;US)
Electrochemistry
Hydrogen, 11:30220 (BA;US)
Leaks
Liquid to gas leak ratios with liquid nitrogen and liquid helium, 11:31190 (J;US)
Separation Processes
Eluent and ligand effects in cation chromatography, 11:30185 (D;US)
Yields
Long-term endurance and selection studies in hydrogen and oxygen photoproduction by Chlamydomonas reinhardtii, 11:29457 (J;GB)

HYDROGEN 1 MINUS BEAMS
Polarized Beams
Review of optically pumped polarized ion sources, 11:30418 (R;CA)
Status of the optically pumped polarized H^- ion source at TRIUMF, 11:30416 (R;CA)

HYDROGEN 1 TARGET
Pion Plus Reactions
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN COMPOUNDS
See also DEUTERIUM COMPOUNDS
HYDROGEN PEROXIDE
HYDROGEN SULFIDES
HYDROXIDES
WATER
Activation Energy
Reactions of HO_3 and O_3^- with iodine and bromine and the I_3^- and I atom reduction potentials, 11:30202 (J;US)
Chemical Reaction Kinetics
Reactions of HO_3 and O_3^- with iodine and bromine and the I_3^- and I atom reduction potentials, 11:30202 (J;US)
Chemical Reactions
Theoretical studies of the energetics and mechanisms of chemical reactions: abstraction reactions, 11:30206 (J;US)
Free Energy
Reactions of HO_3 and O_3^- with iodine and bromine and the I_3^- and I atom reduction potentials, 11:30202 (J;US)

HYDROGEN EMBRITTLEMENT
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 MINUS
For H_1^- ions.
Ion Sources
Review of optically pumped polarized ion sources, 11:30418 (R;CA)
Status of the optically pumped polarized H^- ion source at TRIUMF, 11:30416 (R;CA)

HYDROGEN ISOTOPES
See also DEUTERIUM
TRITIUM
Pumping
Cryopumping hydrogen isotope mixtures in MFTF-B with and without argon adsorbent, 11:31254 (J;US)

HYDROGEN LOGS
See NEUTRON-GAMMA LOGGING

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PEROXIDE
Photolysis
$O(^3P)$ atoms formation by the photolysis of hydrogen peroxide in alkaline aqueous solutions, 11:30299 (J;US)
Redox Reactions
Cytotoxicity from coupled redox cycling of autoxidizing xenobiotics and metals: a selective critical review and commentary on work-in-progress, 11:30727 (J;IL)

HYDROGEN PHOSPHATES
See PHOSPHORIC ACID

HYDROGEN PRODUCTION
Photoelectrolysis
Photovoltaic-electrolyzer system performance results, 11:29458 (BA;CA)

HYDROGEN STORAGE
Materials Testing
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Adsorption
Separation of a five-component gas mixture by pressure swing adsorption, 11:30183 (J;US)
Air Pollution Control
Alkaline scrubbing of in situ oil shale retort offgas at Geokinetics, 11:29279 (BA;US)
Processing in situ oil shale retort offgas with a Stretford plant at Geokinetics, 11:29280 (BA;US)
Catalytic Effects
In situ study of the hydrogenation of diphenyl ether in the presence of pyrrhotite and H_2S, 11:30257 (J;US)
Emission
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Removal
Alkaline scrubbing of in situ oil shale retort offgas at Geokinetics, 11:29279 (BA;US)
Processing in situ oil shale retort offgas with a Stretford plant at Geokinetics, 11:29280 (BA;US)

HYDROGENATION
Catalysts
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)

HYDROLOGY
Monitoring
Workshop on hydrologic and geochemical monitoring in the Long Valley Caldera: proceedings, 11:30747 (R;US)

HYDROPEROXY RADICALS
HO_2
Oxidation
Measurements of the pressure dependence of the HO_3 radical self-disproportionation reaction at 298 K, 11:30207 (J;US)
Reduction
Measurements of the pressure dependence of the HO_3 radical self-disproportionation reaction at 298 K, 11:30207 (J;US)

HYDROXIDES
Radiolysis
Radiation-induced reactions of polymer radicals with ruthenium tris(bipyridyl)-OH adducts in aqueous solutions, 11:30252 (J;US)

HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
See also ALCOHOLS
ESTRADIOL
PHENOLS
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986 (Hydroxyl aromatics), 11:29175 (R;US)
Mass Spectra
Separation and characterization of coal derived components, 1 January 1986-31 March 1986 (Hydroxyl aromatics), 11:29175 (R;US)

HYDROXYBENZENE
See PHENOL

HYDROXYL IONS

Update on the American Syn-Crude/Indiana Shale Oil Project, 11:29272 (BA;US)
INDIUM ARSENIDES
Carrier Lifetime
Comparison of Auger recombination in GaInAs-AlInAs multiple quantum well structure and in bulk GaInAs, 11:30156 (RA;AT)
Superlattices
Dislocation reduction in epitaxial GaAs on Si (100), 11:30165 (J;US)
INDIUM OXIDES
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
INDIUM PHOSPHIDES
Surface Properties
Surface-enhanced resonance Raman study of the photoreduction of methylviologen on a p-InP semiconductor electrode, 11:30285 (J;US)
INDIUM SELENIDE SOLAR CELLS
Fabrication
Photoluminescence studies of CuIn-Se_2 thin films and crystals, 11:29552 (BA;US)
Status of photovoltaics R & D at SERI, 11:29548 (BA;US)
Thin-film tandem solar cells based on $CuInSe_2$, 11:29550 (BA;US)
Physical Radiation Effects
Photon radiation effects on CdS/CuInSe2 thin film solar cells, 11:29533 (RA;US)
INDIUM SELENIDES
Crystal Defects
Photoluminescence studies of CuIn-Se_2 thin films and crystals, 11:29552 (BA;US)
Photoluminescence
Photoluminescence studies of CuIn-Se_2 thin films and crystals, 11:29552 (BA;US)
INDOLES
Structural Chemical Analysis
Structure chemistry, 11:30192 (RA;ZA;In Afrikaans)
INDUSTRIAL LAUNDRIES
See LAUNDRIES
INDUSTRIAL PLANTS

COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS
METHANOL PLANTS
OIL SHALE PROCESSING PLANTS
Air Pollution
Forecasting future industrial SO_x and NO/sub x/ emissions, 11:30551 (J;US)
Cooling Systems
Fouling control in cooling systems using brackish water, 11:29681 (R;FI;In Finnish)
Decontamination
Auburn Steel Company radioactive contamination incident, 11:29408 (R;US)
Energy Conservation
Improvement of the energy economy of industrial lightning, 11:30025 (R;FI;In Finnish)
Heat Pumps
Heat pumps for district heating of smaller cities, 11:30024 (R;FI;In Finnish)
Lighting Systems
Improvement of the energy economy of industrial lightning, 11:30025 (R;FI;In Finnish)
Thermal Insulation
Thermophysical properties of industrial insulators, 11:30021 (J;GB)

Waste Heat Utilization
Heat pumps for district heating of smaller cities, 11:30024 (R;FI;In Finnish)

INDUSTRIAL RADIOGRAPHY
See also BIOMEDICAL RADIOGRAPHY.
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

INDUSTRIAL WASTES
See also SPENT LIQUORS
Ground Disposal
Depositions of environmental pollutants, 11:30023 (R;DE;In German)
Transfrontier Pollution
Pollution problems in border karst regions, 11:30610 (R;IT)

INERTIAL CONFINEMENT
A dynamic plasma confinement by inertial forces.
Krypton Fluoride Lasers
Megajoule-class single-pulse KrF laser test facility as a logical step toward inertial fusion commercialization, 11:31229 (J;US)
Scaling of KrF lasers for inertial confinement fusion, 11:31092 (J;US)

INERTIAL CONFINEMENT FUSION DEVICES
See ICF DEVICES

INFORMATION SYSTEMS
Data Processing
Data processing in the integrated data base for spent fuel and radioactive waste, 11:29421 (BA;US)
Planning
National energy information system for Finland, 11:29917 (R;FI;In Finnish)

INHALATION EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS

INHOMOGENEOUS PLASMA
High-Frequency Heating
Complex geometric optics theory in an inhomogeneous plasma. Appendix B, 11:30962 (R;US)

INORGANIC COMPOUNDS
Use of a more specific term is recommended.
Research Programs
[Council for Scientific and Industrial Research, National Chemical Research Lab.]. Annual report 1985, 11:30193 (R;ZA;In Afrikaans)
Inorganic compounds for passive solar energy storage. Solid-state dehydration materials and high specific heat materials. Progress report, 11:29612 (R;US)

INSECTICIDES
Biological Effects
Effects of pesticide on biota and breakdown of forest litter, 11:30703 (BA;RO)

IN-SERVICE INSPECTION
Research Programs
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)

IN-SITU GASIFICATION
Environmental Effects
Underground coal gasification: environmental update, 11:29171 (B;US)
Research Programs
The Centralia partial seam CRIP underground coal gasification experiment (Controlled retracting injection point), 11:29172 (B;US)
The METC underground coal gasification research program for eastern bituminous coals, 11:29170 (B;US)
Underground coal gasification: status and promise, 11:29173 (B;US)

IN-SITU RETORTING
Gaseous Wastes
Processing in situ oil shale retort offgas with a Stretford plant at Geokinetics, 11:29280 (BA;US)
Mathematical Models
Pressure loss in packed beds of low void fraction, 11:29267 (BA;US)

INSTALLATION
Verification
Methods for verifying strain gage installations, 11:30345 (R;US)

INSULATING LIMITERS
See LIMITERS

INSULATION (THERMAL)

Knock Control
The knock syndrome - its cures and its victims, 11:30043 (B;US)

INTERNATIONAL COOPERATION
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

INTERNATIONAL ENERGY AGENCY
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

INTERNATIONAL TOKAMAK REACTOR
See INTOR TOKAMAK

INTOR TOKAMAK
International Tokamak Reactor.
Coordinated Research Programs
Technical benefit of an international project, 11:31126 (J;US)

Impurities
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
International Cooperation
Technical benefit of an international project, 11:31126 (J;US)
Maintenance
A comparison of all-remote and personnel access maintenance operations for INTOR, 11:31131 (J;US)
Materials Handling
A comparison of all-remote and personnel access maintenance operations for INTOR, 11:31131 (J;US)
Protective Coatings
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Remote Handling
A comparison of all-remote and personnel access maintenance operations for INTOR, 11:31131 (J;US)
Thermal Shields
Nuclear responses in INTOR plasma stabilization elements, 11:31135 (J;US)
Thermonuclear Reactor Materials
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)

INTRANUCLEAR CASCADES
See NUCLEAR CASCADES

INVENTORIES
Errors
Tennessee Valley Authority coal inventory procedures and observations, 11:29682 (R;US)

INVERTEBRATES
Biological Extinction
Impact theory of mass extinctions and the invertebrate fossil record, 11:30573 (J;US)

IODEX PROCESS
See IODOX PROCESS

IODIDES
Oxidation
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Photochemistry
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)

IODINE
Activation Energy
Reactions of HO_2 and O_2^- with iodine and bromine and the I_2^- and I atom reduction potentials, 11:30202 (J;US)
Chemical Reaction Kinetics
Photochemical method for radioiodine abatement, 11:29311 (R;CA)
Reactions of HO_2 and O_2^- with iodine and bromine and the I_2^- and I atom reduction potentials, 11:30202 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Free Energy
Reactions of HO_2 and O_2^- with iodine and bromine and the I_2^- and I atom reduction potentials, 11:30202 (J;US)
Volatility
Studies of the volatility of cesium and iodine, 11:30189 (RA;US)

IODINE 127
Radioactive Waste Processing
Photochemical method for radioiodine abatement, 11:29311 (R;CA)

IODINE 129
Biological Accumulation
Iodine in terrestrial wildlife on the US Department of Energy's Handford site in south-central Washington, 11:30585 (J;NL)
Dose Rates
Calculation of dose rates from critical radionuclides in low-level radioactive waste disposal, 11:29444 (RA;US)
Leaching
Leach resistance of iodine compounds in Portland cement, 11:29425 (J;US)
Radioactive Waste Processing
Photochemical method for radioiodine abatement, 11:29311 (R;CA)
Radioecological Concentration
Iodine in terrestrial wildlife on the US Department of Energy's Handford site in south-central Washington, 11:30585 (J;NL)
Uptake
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)

IODINE 131
Radioactive Waste Processing
Photochemical method for radioiodine abatement, 11:29311 (R;CA)
Radioecological Concentration
Iodine in terrestrial wildlife on the US Department of Energy's Handford site in south-central Washington, 11:30585 (J;NL)

IODINE COMPOUNDS
See also IODIDES
Stability
Leach resistance of iodine compounds in Portland cement, 11:29425 (J;US)

IODINE IODIDES
See IODINE

IODOX PROCESS
Consolidated Fuel Reprocessing Program. Progress report, October 1-December 31, 1985, 11:29296 (R;US)

ION BEAM FUSION REACTORS
Commercialization
ICF reactor economics: identifying the high leverage design features, 11:31231 (J;US)
Cost Benefit Analysis
ICF reactor economics: identifying the high leverage design features, 11:31231 (J;US)
Design
ICF reactor economics: identifying the high leverage design features, 11:31231 (J;US)
Energy Accounting
ICF reactor economics: identifying the high leverage design features, 11:31231 (J;US)
Inertial Confinement
ICF reactor economics: identifying the high leverage design features, 11:31231 (J;US)

ION BEAM TARGETS
Implosions
Effect of nonuniform implosion of target on fusion parameters, 11:31072 (RA;JP)
Equation of state for fuel and target implosion, 11:31071 (RA;JP)
Simulation of LIB target implosion, 11:31073 (RA;JP)
Nonuniform Irradiation
Effect of nonuniform implosion of target on fusion parameters, 11:31072 (RA;JP)

ION BEAM TYPE REACTORS

ION BEAMS
See also DEUTERON BEAMS
HYDROGEN 1 MINUS BEAMS
LITHIUM 6 BEAMS
Beam Dynamics
Transverse electric fields inferred from electron losses and ion beam dynamics in a Magnetically Insulated Diode, 11:31019 (BA;US)
Scattering
Transverse electric fields inferred from electron losses and ion beam dynamics in a Magnetically Insulated Diode, 11:31019 (BA;US)

ION CLUSTERS
See ION PAIRS

ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING

ION DETECTION
Drift Chambers
New focal plane detector for the magnet spectrometer Big Karl, 11:30480 (J;NL)
Plastic Scintillation Detectors
Plastic scintillator response to relativistic nuclei, Z<=28, 11:30484 (J;NL)
ION EXCHANGE
Optimization
Radwaste ion-exchange optimization, 11:29392 (RA;US)
ION EXCHANGE CHROMATOGRAPHY
Resins
Selectivity variations in anion chromatography, 11:30184 (D;US)
ION EXCHANGE MEMBRANES
See MEMBRANES
ION PAIRS
Structural Chemical Analysis
Structure and dynamics of olefin radical cation aggregates. Time-resolved fluorescence detected magnetic resonance, 11:30301 (J;US)
ION SOURCES
Beam Monitoring
An alpha particle diagnostic beam line system to generate an intense Li^{0} beam with an ORNL SITEX source, 11:31200 (J;US)
Beam Optics
An alpha particle diagnostic beam line system to generate an intense Li^{0} beam with an ORNL SITEX source, 11:31200 (J;US)
Design
Single-ring magnetic cusp low gas pressure ion source, 11:30668 (P;US)
Electrodes
Cesium transpiration through a negative-ion forming electrode, 11:31266 (BA;US)
Erosion
Cesium transpiration through a negative-ion forming electrode, 11:31266 (BA;US)
Optical Pumping
Review of optically pumped polarized ion sources, 11:30418 (R;CA)
Status of the optically pumped polarized H^{-} ion source at TRIUMF, 11:30416 (R;CA)
Reviews
Liquid metal field emission thrusters and ion sources: a review. Final report, 11:30032 (R;GB)
ION TEMPERATURE
Doppler Broadening
A photon-counting detector for doppler width ion temperature measurements, 11:31016 (BA;US)
Photoelectron Counting
A photon-counting detector for doppler width ion temperature measurements, 11:31016 (BA;US)
Plasma Diagnostics
A photon-counting detector for doppler width ion temperature measurements, 11:31016 (BA;US)
ION THRUSTERS
Reviews
Liquid metal field emission thrusters and ion sources: a review. Final report, 11:30032 (R;GB)
IONIZATION CALORIMETERS
See SHOWER COUNTERS
IONOSPHERE
Plasma Instability
BUARO PSD vs height, 11:30808 (R;US)
Probes
BUARO PSD vs height, 11:30808 (R;US)
IONS (ATOMIC)
See ATOMIC IONS
IOWA
Dolomite
Geochemistry and origin of regional dolomites. Final report, July 15, 1983-July 14, 1985, 11:30758 (R;US)
IRON
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Fracture Properties
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Hydrogen Embrittlement
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Neutron Transport
Transmission of fast neutrons through an iron sphere, 11:31091 (J;US)
Permeability
Summary abstract: reduction of tritium permeation through iron using aluminum ion implantation, 11:30113 (J;US)
Physical Radiation Effects
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys (Candidate window materials for SIN beam stop), 11:30099 (R;US)
Stress Corrosion
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Sulfidation
Microstructures and growth rates of FeS on pure and not-so-pure iron, 11:30227 (J;US)
IRON 54 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
IRON 56 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Neon 20 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
IRON 57 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
IRON 59
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
IRON ALLOYS
See also HASTELLOYS
INCONEL 600
INCONEL 625
IRON BASE ALLOYS
VANSTAR 7
Fracture Properties
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Hydridation
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)
Physical Radiation Effects
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
IRON BASE ALLOYS
See also STEELS
Corrosion Resistance
Research on erosion and corrosion of cobalt-free materials, 11:30093 (R;FR;In German)
Heat Treatments
Maraging superalloys and heat treatment processes, 11:30107 (P;US)

Materials Testing
FY 1984 and FY 1985 geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:29639 (R;US)
Microstructure
Maraging superalloys and heat treatment processes, 11:30107 (P;US)

IRON COMPLEXES
Carbonylation
Selective transformation of carbonyl ligands to organic molecules. Progress report, September 1, 1983-August 31, 1986, 11:30236 (R;US)
Cations
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Electron Transfer
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Photochemical Reactions
Photoreduction of benzophenone by amino acids, aminopolycarboxylic acids and their metal complexes: a laser-flash-photolysis study, 11:30296 (J;GB)
Radicals
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Raman Effect
Surface Raman scattering and electrochemistry of iron protoporphyrin IX at a polycrystalline silver electrode, 11:30282 (J;US)
Synthesis
Selective transformation of carbonyl ligands to organic molecules. Progress report, September 1, 1983-August 31, 1986, 11:30236 (R;US)
Voltametry
Surface Raman scattering and electrochemistry of iron protoporphyrin IX at a polycrystalline silver electrode, 11:30282 (J;US)

IRON COMPOUNDS
See also IRON FLUORIDES
IRON OXIDES
IRON SULFIDES
Chemical Radiation Effects
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:30306 (J;US)
Nutritional Deficiency
Membrane development in the cyanobacterium, Anacystis nidulans, during recovery from iron starvation, 11:30671 (J;US)

IRON FLUORIDES
Curie Point
Ferrimagnetism in $MnFeF_5.2H_2O$, 11:30219 (J;US)
Ferrimagnetism
Ferrimagnetism in $MnFeF_5.2H_2O$, 11:30219 (J;US)
Magnetic Susceptibility
Ferrimagnetism in $MnFeF_5.2H_2O$, 11:30219 (J;US)
Phase Transformations
Ferrimagnetism in $MnFeF_5.2H_2O$, 11:30219 (J;US)

IRON ISOTOPES
See also IRON 59
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)

IRON OXIDES
Catalytic Effects
Crystallite size effect in the selective oxidation of butene to butadiene on iron oxide. 1. Moessbauer, X-ray, and magnetization characterization of the catalysts, 11:30229 (J;US)
In situ study of the hydrogenation of diphenyl ether in the presence of pyrrhotite and H_2S, 11:30257 (J;US)
Corrosion
Sulfur diffusion in oxide grain boundaries, 11:30117 (J;GB)
Electrochemical Corrosion
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Oxidation
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Photochemistry
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Radiolysis
Enhancement of neutralization reaction in colloidal ferric hydrous oxide, 11:30305 (J;GB)

IRON SULFIDES
Crystal Defects
Accuracy of the linear gradient approximation for diffusion-controlled growth of iron sulfide, 11:30142 (J;US)
Crystal Growth
Microstructures and growth rates of FeS on pure and not-so-pure iron, 11:30227 (J;US)
Microstructure
Microstructures and growth rates of FeS on pure and not-so-pure iron, 11:30227 (J;US)
Scaling
Accuracy of the linear gradient approximation for diffusion-controlled growth of iron sulfide, 11:30142 (J;US)

IRON-FREE SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

IRON-NICKEL BATTERIES
Electrodes
Post-test analyses of Na/S cells and aqueous batteries, 11:29898 (RA;US)

IRRADIATION DEVICES
Characterization of the National Low-Temperature Neutron Irradiation Facility, 11:29818 (R;US)

IRRADIATION RIGS
See IRRADIATION DEVICES

ISOLATED LOCATIONS
See REMOTE AREAS

ISOMERS
Only for geometrical isomers and stereoisomers in chemistry; see also ISOMERIC NUCLEI and FISSION ISOMERS.
Structural Chemical Analysis
Identifying alkylbenzene isomers with chemical ionization-proton exchange mass spectrometry, 11:30268 (J;US)

ISOTOPE ANALYSIS (QUANTITATIVE)
See ISOTOPE RATIO

ISOTOPE COMPOSITION (QUANTITATIVE)
See ISOTOPE RATIO

ISOTOPE DATING
Cyclotrons
Low energy cyclotron for radiocarbon dating, 11:30410 (R;US)

ISOTOPE RATIO
Seasonal Variations
Stable-carbon isotopic composition of maple sap and foliage, 11:30631 (J;US)

ISOTOPES

JAMAICA
Energy Supplies
Jamaica - energy situation 1984, 11:29923 (R;DE;In German)
JAPAN
Electric Power Industry
Coal power plant in Japan, especially in EPDC's case with advanced combustion and cleaning technique, 11:29678 (R;SE)
Fossil-Fuel Power Plants
Coal power plant in Japan, especially in EPDC's case with advanced combustion and cleaning technique, 11:29678 (R;SE)
Imports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
PWR Type Reactors
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Technology Transfer
Information flow from Japan to US researchers in applied and basic energy research fields, 11:29919 (J;US)
JET MODEL
Reviews
Jet fragmentation, 11:30875 (R;GB)
JET REACTORS
See JET TOKAMAK
JET TOKAMAK
ICR Heating
Material and electromagnetic properties of Faraday shields for ion cyclotron heating antennas, 11:31191 (J;US)
Limiters
Thermomechanical testing of beryllium for limiters in ISX-B and jet, 11:31238 (J;US)

K

KAOLIN
Thermal Conductivity
Thermal properties of clay-based buffer materials for a nuclear fuel waste disposal vault, 11:30147 (R;CA)
KAON MINUS-PROTON INTERACTIONS
Scattering Amplitudes
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^- p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
Scattering Lengths
Constant scattering length fits to low energy Kp interactions, 11:30844 (R;GB)
Strong Interactions
Constant scattering length fits to low energy Kp interactions, 11:30844 (R;GB)
Total Cross Sections
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
KAON-NUCLEON INTERACTIONS
Partial Waves
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1983-April 30, 1984, 11:30854 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1982-April 30, 1983, 11:30853 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1980-April 30, 1981, 11:30852 (R;US)
Partial wave analysis of π-N, NN, and KN scattering below 2 GeV. Progress report, June 1, 1979-May 31, 1980, 11:30851 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1984-April 30, 1985, 11:30855 (R;US)
Partial wave analyses of hadron scattering below 2 GeV. Progress report, May 1, 1985-April 30, 1986, 11:30856 (R;US)
KAONS
Particle Production
K-meson production by nu/sub μ/-deuterium reactions near threshold: implications for nucleon-decay searches, 11:30824 (R;US)
KARLSRUHE NUCLEAR RESEARCH CENTER
See KERNFORSCHUNGSZENTRUM KARLSRUHE
KEK INTERS. STORAGE ACCELERATOR
See TRISTAN STORAGE RINGS
KERNFORSCHUNGSZENTRUM KARLSRUHE
Personnel Monitoring
Results of incorporation monitoring by excretion analyses performed at the Karlsruhe Nuclear Research Center during the years 1979 until 1984, 11:30694 (R;DE;In German)
KETONES
See also ACETONE
ACETOPHENONE
BENZOPHENONE
Pyrolysis
Measurement of the dipole moment of a peroxyl radical by microwave dielectric absorption, 11:30274 (J;US)
KIDNEYS
Contamination
Cadmium retention in the kidneys of chicks as influenced by phytate in the feed, 11:30718 (R;DE;In German)
KINASES
See PHOSPHOTRANSFERASES
KINASES (PHOSPHOTRANSFERASES)
See PHOSPHOTRANSFERASES
KOREA (SOUTH)
See REPUBLIC OF KOREA
KRYPTON
Fission Products
Effects of time and other variables on fission product release rates, 11:29748 (R;US)
Thermal Diffusion
Mound activities in chemical and physical research: July-December 1985, 11:30196 (R;US)
KRYPTON 86 REACTIONS
Compound-Nucleus Reactions
Study of transitional Erbium nuclei (N=86) at very high spin. Highlight of dipolar transitions and medium lifetimes in the continuum, 11:30909 (R;FR;In French)
KRYPTON COMPOUNDS
See also KRYPTON FLUORIDES
Photoionization
Predissociation and ionization of excited KrXe observed using resonantly enhanced multiphoton ionization-photoelectron spectroscopy, 11:30293 (J;NL)
KRYPTON FLUORIDE LASERS
Commercialization
Megajoule-class single-pulse KrF laser test facility as a logical step toward inertial fusion commercialization, 11:31229 (J;US)
Design
Design optimization of single-main-amplifier KrF laser-fusion systems, 11:31230 (J;US)
Scaling of KrF lasers for inertial confinement fusion, 11:31092 (J;US)

Performance
Scaling of KrF lasers for inertial confinement fusion, 11:31092 (J;US)
Pulse Amplifiers
Design optimization of single-main-amplifier KrF laser-fusion systems, 11:31230 (J;US)
Scaling Laws
Scaling of KrF lasers for inertial confinement fusion, 11:31092 (J;US)
Test Facilities
Megajoule-class single-pulse KrF laser test facility as a logical step toward inertial fusion commercialization, 11:31229 (J;US)
KRYPTON FLUORIDES
Pyrolysis
Mechanism of thermal decomposition of krypton difluoride, 11:30233 (TJ;US)
KRYPTONATES
See KRYPTON COMPOUNDS
KUWAIT
Energy Supplies
Kuwait - energy situation 1984, 11:29929 (R;DE;In German)

L

LA REINA REACTOR
See RESEARCH REACTORS
LAKE ONTARIO
Monitoring
Using aquatic simulation models for impact assessment: evaluation of monitoring programs, 11:30614 (RA;US)
LAKES
Limnology
Control of productivity and population characteristics in aquatic communities. Progress report, 1 September 1982-31 August 1983, 11:30594 (R;US)
LAMBS
See SHEEP
LAND APPLICATION
See GROUND DISPOSAL
LAND POLLUTION
Meetings
Perspectives on nonpoint source pollution - proceedings of a national conference, 11:29188 (R;US)
LAND RECLAMATION
Financing
Coal industry perspectives on nonpoint source pollution, 11:29191 (RA;US)
Pollution Abatement
Trends in post-mining land uses - are we doing our children justice?, 11:29190 (RA;US)
Recommendations
Trends in post-mining land uses - are we doing our children justice?, 11:29190 (RA;US)
Regulations
Coal industry perspectives on nonpoint source pollution, 11:29191 (RA;US)
LAND USE
Economic Analysis
Land use model with a constant-utility spatially variant wage, 11:30592 (J;US)
LANGMUIR OSCILLATIONS
See PLASMA WAVES
LANTHANUM
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM COMPOUNDS
Crystal-Phase Transformations
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Formation Free Energy
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Specific Heat
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Stability
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
LARGE COIL PROGRAM
Superconducting Magnets
Experience with operation of a large magnet system in the international fusion superconducting magnet test facility, 11:31170 (J;US)
Partial-array test results in IFSMTF, 11:31171 (J;US)
LASER FUSION REACTORS
See also CASCADE REACTORS
Breeding Blankets
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)
Commercialization
KrF laser cost/performance model for ICF commercial applications, 11:31227 (J;US)
Computerized Simulation
KrF laser cost/performance model for ICF commercial applications, 11:31227 (J;US)
Coolants
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)
Design
The Pulse Star inertial confinement fusion reactor, 11:31223 (J;US)
Inertial Confinement
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)
KrF laser cost/performance model for ICF commercial applications, 11:31227 (J;US)
The Pulse Star inertial confinement fusion reactor, 11:31223 (J;US)
Krypton Fluoride Lasers
Design optimization of single-main-amplifier KrF laser-fusion systems, 11:31230 (J;US)
KrF laser cost/performance model for ICF commercial applications, 11:31227 (J;US)
Megajoule-class single-pulse KrF laser test facility as a logical step toward inertial fusion commercialization, 11:31229 (J;US)
Performance
KrF laser cost/performance model for ICF commercial applications, 11:31227 (J;US)
Thermonuclear Reactor Cooling Systems
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)
LASER IMPLOSIONS
Proton Spectra
Analysis of doublet proton spectra from laser implosion experiments, 11:31256 (J;US)
LASER ISOTOPE SEPARATION
Production of a Raman laser at 16 μm, 11:29290 (R;FR;In French)
LASER RADIATION
Beam Optics
Scattering apodizer for laser beams, 11:30366 (P;US)
Beam Shaping
Scattering apodizer for laser beams, 11:30366 (P;US)
Diffraction
Scattering apodizer for laser beams, 11:30366 (P;US)
Scattering
Scattering apodizer for laser beams, 11:30366 (P;US)
LASER-PRODUCED PLASMA
Reviews
High energy laser plasma accelerators, 11:31093 (J;GB)

X-Ray Sources
Dynamical aspects of the picosecond x-ray generation from laser-produced plasmas, 11:30373 (BA;US)
X-Ray Spectra
Experimental and simulation studies on soft-X-ray emission from 0.53 micron-laser irradiated solid targets, 11:30374 (BA;US)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
X-RAY LASERS
Amplification
Q-switched raman laser system, 11:30367 (P;US)
Brillouin Effect
Q-switched raman laser system, 11:30367 (P;US)
Design
Q-switched raman laser system, 11:30367 (P;US)
Q-Switching
Q-switched raman laser system, 11:30367 (P;US)
Raman Effect
Q-switched raman laser system, 11:30367 (P;US)

LATE RADIATION EFFECTS
See DELAYED RADIATION EFFECTS

LATENT HEAT STORAGE
Materials
Inorganic compounds for passive solar energy storage. Solid-state dehydration materials and high specific heat materials. Progress report, 11:29612 (R;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LATTICES (REACTOR)
See REACTOR LATTICES

LAUNDRIES
Inventories
Hanford regulated laundry: inventory control and production improvement study, 11:30344 (R;US)
Productivity
Hanford regulated laundry: inventory control and production improvement study, 11:30344 (R;US)

LAURIC ACID
See DODECANOIC ACID

LAWRENCE BERKELEY LABORATORY
Research Programs
Brine injection studies, 11:29912 (RA;US)
Geothermal reservoir technology, 11:29614 (RA;US)

LAWRENCE LIVERMORE LABORATORY
Education
Training and development and education at Lawrence Livermore National Laboratory, 11:31273 (R;US)
Training
Training and development and education at Lawrence Livermore National Laboratory, 11:31273 (R;US)

LEACHATES
Chemical Composition
Study of the conditions of formation and emission of trace element pollutants from the combustion of coal in industrial fires, 11:29199 (R;XE)
Gas Chromatography
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Liquid Column Chromatography
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

LEACHING
Simulation
Hydrothermal flow-through apparatus to simulate leaching of nuclear waste forms under quasi-dynamic conditions, 11:29431 (R;CA)

LEAD
Casting
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Ecological Concentration
Collection and analysis of trace metals in continental precipitation at forested sites in the Southeastern United States, 11:30524 (R;US)
Environmental Transport
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)
Heat Transfer
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
Neon 20 Reactions
Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions, 11:30906 (R;JP)
Root Absorption
Transfer soil to plant (Lolium multiflorum) of cobalt, chromium, and lead, 11:30719 (R;DE;In German)

LEAD 208
Giant Resonance
Spin excitations in ^{208}Pb, 11:30923 (BA;US)
Spin
Spin excitations in ^{208}Pb, 11:30923 (BA;US)

LEAD ALLOYS
See also LEAD BASE ALLOYS
Corrosive Effects
Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li, 11:31038 (RA;US)
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Fluid-Structure Interactions
Safety considerations of lithium lead alloy as a fusion reactor breeding material, 11:31239 (J;US)

LEAD BASE ALLOYS
Neutron Flux
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)
Radioactivation
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)

LEAD METHOD
See ISOTOPE DATING

LEAD SELENIDES
Optical Properties
Enhanced photoredox chemistry in quantized semiconductor colloids, 11:30289 (J;US)

LEAD-ACID BATTERIES
Charges
Innovative on-board instrumentation for EV battery characterization, 11:30055 (RA;US)
Design
Multiple constant power discharge tester, 11:29897 (RA;US)
Electrical Faults
Fundamental studies of utility requirement for secondary batteries - lead-acid batteries, 11:29673 (RA;US)
Electrodes
Post-test analyses of Na/S cells and aqueous batteries, 11:29898 (RA;US)
Maintenance
Battery monitoring and integrity testing of large lead-acid storage batteries, 11:29895 (RA;US)
Performance
Fundamental studies of utility requirement for secondary batteries - lead-acid batteries, 11:29673 (RA;US)
Quality test of lead accumulators, especially of maintenance-free, sealed lead batteries with immobilized electrolyte, 11:29891 (RA;US)
Rebirth of the lead-acid battery - meeting the electric vehicle challenges of the 1980s, 11:30066 (BA;GB)
Performance Testing
Accelerated life cycle test advanced lead-acid cells at elevated temperature, 11:29943 (RA;US)
Battery storage test facility for load frequency control and instantaneous reserve, 11:29672 (RA;US)

Design, electric vehicle simulation program and duty cycle for a computer controlled bench test of lead-acid batteries, 11:30057 (RA;US)
Innovative on-board instrumentation for EV battery characterization, 11:30055 (RA;US)
Multiple constant power discharge tester, 11:29897 (RA;US)
Overview of Australian lead/acid battery test programs, 11:29879 (RA;US)
Overview of battery testing in the UK, 11:29882 (RA;US)
Performance testing of advanced lead-acid batteries for electric vehicles, 11:30053 (RA;US)
Test and data reduction algorithm for the evaluation of lead-acid battery packs, 11:30052 (RA;US)
Testing of batteries in Germany, 11:29881 (RA;US)
Technology Assessment
Rebirth of the lead-acid battery - meeting the electric vehicle challenges of the 1980s, 11:30066 (BA;GB)
Testing
Battery monitoring and integrity testing of large lead-acid storage batteries, 11:29895 (RA;US)

LEASING
Government Policies
Economic assessment of effects of royalties, severance taxes, and diligent development requirements on coal production, prices, and consumer costs. Draft final report, 11:29228 (R;US)

LEAVES
Histology
Effects of quantum flux density of photosynthesis and chloroplast ultrastructure in tissue-cultured plantlets and seedlings of Liquidambar styraciflua L. towards improved acclimatization and field survival, 11:30679 (J;US)
Physiology
Relationship between stress-induced ABA and proline accumulations and ABA-induced proline accumulation in excised barley leaves, 11:30675 (J;US)

LEP STORAGE RINGS
European Large Electron-Positron storage rings.
Fastbus System
The FASTBUS Segment Extension as a crate coupling concept, 11:30463 (J;US)
Particle Identification
Some aspects of the physics at LEP with the Delphi detector, 11:30873 (R;FR)
Research Programs
Some aspects of the physics at LEP with the Delphi detector, 11:30873 (R;FR)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

LEPTONS
See also HEAVY LEPTONS
NEUTRINOS
Mass Formulae
Mass hierarchies of quarks and leptons in a supersymmetric SP(2N) subcolor theory, 11:30864 (R;JP)
Particle Identification
How to search for new particles at anti pp colliders, 11:30847 (BA;US)
Particle Structure
New particle searches at e^+e machines, 11:30838 (R;FR)

LEUCINE
Chemical Preparation
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)

LIBRARIES
On-Line Systems
Computing Services Software Library, 11:31293 (R;US)

LICHENS
Comparative Evaluations
Retention of simulated fallout particles by lichens and mosses, 11:30587 (J;US)

LI-DRIFTED SI DETECTORS
Fabrication
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)
Performance
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)

LIGHT
See VISIBLE RADIATION

LIGHTING SYSTEMS
Design
Improvement of the energy economy of industrial lightning, 11:30025 (R;FI;In Finnish)
Energy Conservation
Improvement of the energy economy of industrial lightning, 11:30025 (R;FI;In Finnish)

LIGNITE
Ash Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Biodegradation
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Chemical Composition
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Sulfur Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)

LIMESTONE
Corrosion
Roughening, recession, and chemical alteration of marble and limestone sample surfaces during atmospheric exposure in the eastern United States, 11:30526 (R;US)
Weathering
Roughening, recession, and chemical alteration of marble and limestone sample surfaces during atmospheric exposure in the eastern United States, 11:30526 (R;US)

LIMITERS
See also PUMPED LIMITERS
Comparative Evaluations
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)
Cooling Systems
Evaluation of cooling channel configurations for actively cooled limiters, 11:31081 (R;US)
Performance
Sputtering performance of a pumped limiter for an ignition tokamak, 11:31090 (J;US)

LINERS
Metallography
Metallographic examination of EPICOR-II liners from Three Mile Island, 11:29362 (RA;US)

LIPOPROTEINS
Receptors
Effect of preferential insertion of LDL receptors near coated pits, 11:30636 (J;US)

LIQUEFIED GASES
See also LIQUEFIED PETROLEUM GASES
Leaks
Liquid to gas leak ratios with liquid nitrogen and liquid helium, 11:31190 (J;US)

LIQUEFIED PETROLEUM GASES
Hazards
Liquefied gases risk assessment. Part 1: LPG land transportation and storage safety. Part 2: Potential hazards of low-temperature LPG in contact with warmer liquids, e.g. water, 11:29243 (R;DE;In German)

LIQUID ASPHALT
See PETROLEUM RESIDUES

LIQUID COLUMN CHROMATOGRAPHY
Identification of nonvolatile coal derived products via chromatography coupled with on-line FTIR detection. Quarterly progress report, September 1-November 30, 1985, 11:29183 (R;US)
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)

LIQUID CRYSTALS
Nuclear Magnetic Resonance
Proton and deuterium NMR experiments in zero field, 11:30814 (R;US)
LIQUID EFFLUENTS
See LIQUID WASTES
LIQUID METAL COOLANT
See LIQUID METALS
LIQUID METAL COOLED REACTORS
See also LMFBR TYPE REACTORS
Fuel Assemblies
Mechanically attached load pad for liquid metal nuclear reactor fuel assemblies, 11:29782 (P;US)
LIQUID METAL TEST FACILITIES
See TEST FACILITIES
LIQUID METALS
Control
MHD flow control as a design approach for self-cooled liquid-metal blankets of magnetic confinement fusion reactors, 11:31112 (J;US)
Corrosive Effects
Liquid-metal corrosion, 11:31098 (J;US)
Ion Emission
Liquid metal field emission thrusters and ion sources: a review. Final report, 11:30032 (R;GB)
Liquid Flow
MHD flow control as a design approach for self-cooled liquid-metal blankets of magnetic confinement fusion reactors, 11:31112 (J;US)
Magnetohydrodynamics
Experimental facility for studying MHD effects in liquid metal cooled blankets, 11:31110 (J;US)
Magnetohydrodynamic considerations for the design of self-cooled liquid-metal fusion reactor blankets, 11:31111 (J;US)
MHD flow control as a design approach for self-cooled liquid-metal blankets of magnetic confinement fusion reactors, 11:31112 (J;US)
LIQUID WASTES
See also SPENT LIQUORS
WASTE WATER
Minimization
Liquid radwaste minimization efforts at Duke Power Company, 11:29367 (RA;US)
LIQUIDS
See also COAL LIQUIDS
LIQUID CRYSTALS
LIQUID METALS
Fragmentation
Fragmentation of suddenly heated liquids in ICF reactors, 11:31189 (J;US)
Heating
Fragmentation of suddenly heated liquids in ICF reactors, 11:31189 (J;US)
LITEK LAMP
See FLUORESCENT LAMPS
LITHIUM
Breeding Ratio
Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples, 11:31204 (J;US)
Corrosive Effects
Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium, 11:31037 (RA;US)
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Environmental effects on properties of structural alloys in flowing lithium, 11:31039 (RA;US)
Crystal Doping
Electron spin echo studies of donor-doped poly(p-phenylene) and its oligomers, 11:30272 (J;GB)
Materials Testing
Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples, 11:31204 (J;US)
LITHIUM 6 BEAMS
Beam Production
An alpha particle diagnostic beam line system to generate an intense Li^{0} beam with an ORNL SITEX source, 11:31200 (J;US)
LITHIUM 6 TARGET
Neutron Reactions
Evaluation of neutron nuclear data of ^{6}Li for JENDL-3, 11:30901 (R;JP)
Photoproduction
Search of prompt electrons in the NA14 photoproduction experiment at the CERN, 11:30836 (R;FR;In French)
LITHIUM 7 TARGET
Neutron Reactions
Evaluation of neutron nuclear data of ^{7}Li for JENDL-3, 11:30902 (R;JP)
Neutron nuclear data of ^{7}Ni adopted in JENDL-2, 11:30899 (R;JP)
LITHIUM ALLOYS
Corrosive Effects
Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li, 11:31038 (RA;US)
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Fluid-Structure Interactions
Safety considerations of lithium lead alloy as a fusion reactor breeding material, 11:31239 (J;US)
Materials Testing
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Neutron Flux
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)
Physical Radiation Effects
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Radioactivation
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)
LITHIUM BROMIDES
Thermodynamic Properties
Thermodynamic properties state equations of pure methanol and methanol-LiBr . $ZnBr_2$ solutions used in vapor absorption refrigeration and air-conditioning cycle, 11:29595 (RA;US)
LITHIUM COMPLEXES
Comparative Evaluations
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
Molecular Structure
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
Surface Properties
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
LITHIUM COMPOUNDS
See also LITHIUM OXIDES
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
LITHIUM OXIDES
Breeding Ratio
Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples, 11:31204 (J;US)
Thermochemical comparison of the effectiveness of protium purging of fusion breeders, 11:31142 (J;US)
Chemical Reactions
Compatibility of Li_2O in a flowing helium environment, 11:31040 (RA;US)

Materials Testing
Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples, 11:31204 (J;US)
Mechanical Properties
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Physical Radiation Effects
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Porosity
Tritium breeding material : *o* $LiAlO_2$, 11:31160 (J;US)
Reviews
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiAlO_2$ solid breeders with and without irradiation effects, 11:31255 (J;US)

LITHIUM-SULFUR BATTERIES
Performance Testing
Advanced secondary battery development and testing: a Canadian perspective, 11:29880 (RA;US)

LIXIVIATION
See LEACHING

LMFBR TYPE REACTORS
Alloy Nuclear Fuels
Gas-bubble growth mechanisms in the analysis of metal fuel swelling, 11:30082 (R;US)
Fire Hazards
Local transport of vertically- and horizontally-emitted sodium oxide aerosols, 11:29778 (R;US)
Primary Coolant Circuits
TRIO a general computer code for reactor 3-D flows analysis. Application to a LMFBR hot plenum, 11:30376 (R;FR)
Reactor Components
Elasto-plastic benchmark calculations. Step 1: verification of the numerical accuracy of the computer programs, 11:31278 (R;FR)
Reactor Operation
Model for LMFBR core transient analysis in real-time, 11:29779 (R;US)
Steam Generators
Ten years of sodium cooled steam generator tests on the C.G.V.S. Synthesis of the results obtained on these equipments and operation experiments of an industrial size test facility, 11:29780 (R;FR;In French)

LOCA
See LOSS OF COOLANT

LOCAL GALAXY
See MILKY WAY

LOCAL GOVERNMENT
Taxes
Local economic impacts associated with pure taxable capacity changes, 11:29790 (J;US)
Local taxation and the consequences of revenue distribution patterns, 11:30622 (J;NL)

LOCAL GROUP
See GALAXIES

LOFT REACTOR
Reactor Operation
Influence of LOFT PWR transient simulations on thermal-hydraulic aspects of commercial PWR safety, 11:29869 (J;US)
Research Programs
Influence of LOFT PWR transient simulations on thermal-hydraulic aspects of commercial PWR safety, 11:29869 (J;US)

LONG VALLEY
Calderas
Workshop on hydrologic and geochemical monitoring in the Long Valley Caldera: proceedings, 11:30747 (R;US)

LONG-LENS SPECTROMETERS
See MAGNETIC LENS SPECTROMETERS

LOS ALAMOS
Radioactive Waste Management
Distribution of plutonium and americium beneath a 33-year-old liquid waste disposal site, 11:30618 (J;US)

LOSS OF COOLANT
Computerized Simulation
Simulation of FIST tests using TRAC-BD1/MOD1, 11:29827 (R;US)
Core Flooding Systems
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Heat Transfer
Comparison of TRAC-PF1/MOD1 to a no-failure UPI test in the Cylindrical Core Test Facility, 11:29844 (R;US)
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Heat transfer to a dispersed two phase flow and detailed quench front velocity research, 11:29836 (R;FR)
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)
Simulation of FIST tests using TRAC-BD1/MOD1, 11:29827 (R;US)
Study of two-dimensional effects in the core of a light water reactor during the ECC'S phase following a loss of coolant accident, 11:29837 (R;FR)
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Hydraulics
Comparison of TRAC-PF1/MOD1 to a no-failure UPI test in the Cylindrical Core Test Facility, 11:29844 (R;US)
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)
Simulation of FIST tests using TRAC-BD1/MOD1, 11:29827 (R;US)
Study of two-dimensional effects in the core of a light water reactor during the ECC'S phase following a loss of coolant accident, 11:29837 (R;FR)
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Rewetting
Heat transfer to a dispersed two phase flow and detailed quench front velocity research, 11:29836 (R;FR)
Study of rewetting and quench phenomena by single pin out-of-pile experiments, with special emphasis on the effect of pin composition, 11:30379 (R;FR)
Test Facilities
Comparison of TRAC-PF1/MOD1 to a no-failure UPI test in the Cylindrical Core Test Facility, 11:29844 (R;US)

LOSS OF FLUID TEST REACTOR
See LOFT REACTOR

LOWER HYBRID HEATING
Efficiency
Top-versus-side launch of lower hybrid waves in PLT, 11:30990 (J;AT)
Harmonics
Mode conversion of lower hybrid waves at high ion cyclotron harmonics. Appendix F, 11:30963 (R;US)
Numerical Solution
Numerical modeling of lower hybrid heating and current drive, 11:30979 (R;US)

LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING

LOW-LEVEL RADIOACTIVE WASTES
Combustion
Commercial regional incinerator facility for treatment of low-level radioactive waste, 11:29385 (RA;US)
Comparison between mobile VR services and central VR service facility for dry active waste, 11:29386 (RA;US)
Mobile incineration services at Commonwealth Edison's nuclear stations, 11:29381 (RA;US)
Compacting
Comparison between mobile VR services and central VR service facility for dry active waste, 11:29386 (RA;US)
DAW volume reduction (VR) using the newly developed 20 MN (2200 tons) SUPERPACK: a new generation of supercompactor equipment, 11:29382 (RA;US)

Operating experience of a mobile waste shredding system, 11:29347 (RA;US)
Operating experience with a dry active waste shredder/compactor at a nuclear power plant, 11:29384 (RA;US)
Volume reduction of dry active waste: the mobile service option, 11:29383 (RA;US)

Containers
Experiences in development, qualification, and use of concrete high-integrity containers in commercial disposal of radioactive wastes, 11:29359 (RA;US)

Decontamination
Recycle operations as a methodology for radioactive waste volume reduction, 11:29344 (RA;US)

Evaporation
Operational experience of the Palisades volume reduction system: the first 12 months, 11:29387 (RA;US)

Fluidized-Bed Combustion
Aeroject fluidized bed volume reduction system operation and licensing, 11:29390 (RA;US)

Geochemistry
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)

Ground Disposal
Remedial waste management practices resulting in the decline of airborne plutonium adjacent to a liquid waste disposal ditch at the Hanford site, 11:29435 (RA;US)
Subsurface moisture regimes and tracer movement under two types of trench-cap designs for shallow land burial sites, 11:29403 (R;US)
Technology development for the design of waste repositories at arid sites: field studies of biointrusion and capillary barriers, 11:29404 (R;US)

Grouting
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)

Marine Disposal
Comparison of land and ocean disposal alternatives for bulk wastes containing naturally occurring radionuclides, 11:29339 (RA;US)

Meetings
Proceedings of the seventh annual participants' information meeting. DOE Low-Level Waste Management Program, 11:29399 (R;US)
Waste Management '85: Waste Isolation in the US - Technical Programs and Public Education. Volume 2. Waste policies and programs, low-level waste, 11:29317 (R;US)

Minimization
Solid waste minimization at Duke Power Company, 11:29366 (RA;US)

Nuclear Waste Policy Acts
Public Law 99-240: an act to amend the low-Level Radioactive Waste Policy Amendments Act of 1985. Introduced in the Senate and House of Representatives of the United States of America in Congress assembled, Ninety-Ninth Congress, January 15, 1986, 11:29419 (B;US)

Packaging
Integration of interim storage and the permanent disposal of low-level radioactive waste, 11:29336 (RA;US)

Pelletizing
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)

Political Aspects
Institutional and technical issues in the management of low-level mixed wastes, 11:29329 (RA;US)

Quantitative Chemical Analysis
Analytical techniques for the in-situ quantification of low-level waste, 11:30177 (RA;US)

Radioactive Waste Disposal
California's response to the Low-Level Radioactive Waste Policy Act of 1980: policy and progress, 11:29321 (RA;US)
Development of the Central Waste Disposal Facility, 11:29341 (RA;US)
Estimating waste disposal quantities from raw waste samples, 11:29395 (RA;US)
Fifteen years of radioactive waste management at Ontario Hydro, 11:29372 (RA;US)
Geology of the host formation for the new hydraulic fracturing facility at Oak Ridge National Laboratory, 11:29375 (RA;US)
Integration of interim storage and the permanent disposal of low-level radioactive waste, 11:29336 (RA;US)
Monitoring of surface deformation and microseismicity applied to radioactive waste disposal through hydraulic fracturing at Oak Ridge National Laboratory, 11:29376 (RA;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)
Penn State continuing education program on low-level radioactive waste disposal and management: lessons learned, 11:29318 (RA;US)
Recent hydrofracture operations at Oak Ridge National Laboratory, 11:29374 (RA;US)
Regulatory framework for hazardous mixed wastes, 11:29328 (RA;US)
Selection and evaluation of potential very low level wastes (VLLW) from nuclear power plants, 11:29364 (RA;US)
Texas goes it alone: political and legal considerations, 11:29320 (RA;US)
Through the regulatory hoop, 11:29322 (RA;US)
Transition from storage to permanent disposal of low- and intermediate-level wastes at the Chalk River Nuclear Laboratories, 11:29324 (RA;US)

Radioactive Waste Facilities
Comparison of low-level radioactive waste management alternatives, 11:29335 (RA;US)
Local government participation in the siting of a low-level radioactive waste disposal facility: the Texas experience, 11:29319 (RA;US)
Low-level volume reduction services facility, 11:29348 (RA;US)

Radioactive Waste Management
Institutional and technical issues in the management of low-level mixed wastes, 11:29329 (RA;US)
Proceedings of the seventh annual participants' information meeting. DOE Low-Level Waste Management Program, 11:29399 (R;US)
Strategy and need: DOE's hazardous waste program, 11:29333 (RA;US)
Waste Management '85: Waste Isolation in the US - Technical Programs and Public Education. Volume 2. Waste policies and programs, low-level waste, 11:29317 (R;US)

Radioactive Waste Processing
Advanced cement solidification process, 11:29352 (RA;US)
Comparison between mobile VR services and central VR service facility for dry active waste, 11:29386 (RA;US)
DAW volume reduction (VR) using the newly developed 20 MN (2200 tons) SUPERPACK: a new generation of supercompactor equipment, 11:29382 (RA;US)
Durasil ion exchangers: experience at Arkansas Nuclear One, 11:29351 (RA;US)
Fifteen years of radioactive waste management at Ontario Hydro, 11:29372 (RA;US)
Liquid radwaste processing, operational experience utilizing Duratek Mobile Process System (MPS), 11:29391 (RA;US)
Mobile liquid VR system: a cost effective alternative, 11:29349 (RA;US)
Operating experience with a dry active waste shredder/compactor at a nuclear power plant, 11:29384 (RA;US)
Operational experiences of non-precoated type filters (super fine filter) in PWR and BWR nuclear power plants, 11:29812 (RA;US)
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)
Radwaste ion-exchange optimization, 11:29392 (RA;US)
SETH 200: new mobile unit for spent ion-exchange resins embedding in polymers, 11:29343 (RA;US)
Stabilizing solidification I: a method of immobilization of radioactive waste involving volume reduction, 11:29345 (RA;US)

Testing and operation of a transportable volume reduction unit, 11:29363 (RA;US)
Transport, installation, and testing of a transportable volume reduction and bitumen solidification system, 11:29388 (RA;US)
Vitrokele compositions: novel, high affinity, metal selective and regenerable media for the removal of radioactive metals from aqueous nuclear waste streams, 11:29357 (RA;US)
Volume reduction through dry active waste segregation, 11:29350 (RA;US)
Volume reduction of dry active waste: the mobile service option, 11:29383 (RA;US)
Radioactive Waste Storage
Extended storage of low-level radioactive waste: potential problem areas, 11:30079 (RA;US)
Modification of an existing radwaste facility to provide onsite low level waste storage, 11:29368 (RA;US)
Radioactivity
Segregation of low-level dry active waste, 11:29365 (RA;US)
Radiochemical Analysis
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)
Regulations
Through the regulatory hoop, 11:29322 (RA;US)
Sampling
Solving sampling problems, 11:29371 (RA;US)
Solidification
Advanced cement solidification process, 11:29352 (RA;US)
Cementation of radioactive wastes in the Federal Republic of Germany, 11:29377 (RA;US)
Design, manufacturing and commissioning of mobile unit for EDF (Dow Chemical process), 11:29358 (RA;US)
Design of a modular radwaste facility, 11:29355 (RA;US)
Industrial demonstration plant for granulation of simulated radioactive and toxic wastes, 11:29356 (RA;US)
Operational and long-term performance assessment for Hanford grout, 11:29379 (RA;US)
Operational experience of the Palisades volume reduction system: the first 12 months, 11:29387 (RA;US)
Overview of the applications of cement-based immobilization technologies developed at US DOE facilities, 11:29373 (RA;US)
Recent experiences with cement solidification systems, 11:29378 (RA;US)
Stabilizing solidification II: fundamental test of the waste solidification process utilizing hydrothermal reaction, 11:29346 (RA;US)
Transport, installation, and testing of a transportable volume reduction and bitumen solidification system, 11:29388 (RA;US)
Underground Disposal
Application of organic tracers in characterizing the Greater Confinement Disposal Test at the Nevada Test Site, 11:29340 (RA;US)
Comparison of land and ocean disposal alternatives for bulk wastes containing naturally occurring radionuclides, 11:29339 (RA;US)
Considerations for creating a free-standing monolith, 11:29338 (RA;US)
Greater-confinement disposal of radioactive wastes, 11:29337 (RA;US)
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)
Modularized system for disposal of low-level radioactive waste, 11:29342 (RA;US)
Segregation of low-level dry active waste, 11:29365 (RA;US)
Subsidence and settlement and their effect on shallow land burial, 11:29326 (RA;US)
Volume
Estimating waste disposal quantities from raw waste samples, 11:29395 (RA;US)
Water Removal
Dewatering of bean and powdered resin at Three Mile Island Unit 1, 11:29370 (RA;US)
Radwaste drying: an engineered system for powdered and granular media, 11:29353 (RA;US)

Microwave Heating
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Thermal Diffusion
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Toxicity
Cytotoxicity from coupled redox cycling of autoxidizing xenobiotics and metals: a selective critical review and commentary on work-in-progress, 11:30727 (J;IL)
METAMORPHIC ROCKS
See also GNEISSES
MARBLE
Radionuclide Migration
Scientific basis for nuclear waste management IX, 11:29420 (B;US)
METEORITES
Environmental Impacts
Impact theory of mass extinctions and the invertebrate fossil record, 11:30573 (J;US)
METHANE
Adsorption
Separation of a five-component gas mixture by pressure swing adsorption, 11:30183 (J;US)
Biosynthesis
Attempt of the biogas development and utilization. The introduction of the community biogas digesters and biogas distribution to each family in an agricultural research institute, 11:29468 (RA;DE)
Biogas technology for water pumping in Botswana, 11:29464 (RA;DE)
Critical evaluation of anaerobic fermentation of waste products 'a management study', 11:29484 (R;FR)
Development of biogas technology in Ethiopia, 11:29471 (RA;DE)
Electrical control of a cogeneration set in parallel mains operation or in stand-by operation, 11:29480 (RA;DE)
FAL-biogas R/D project, 11:29482 (RA;DE)
Implementation of biogas strategy in livestock disciplines in Thailand, 11:29475 (RA;DE)
India's experiment with community biogas plants. Case study, 11:29500 (RA;DE)
Multiple utilization of the biomass, 11:29466 (RA;DE)
Pilot experiment for cooperative community biogas facilities in rural Egypt indicated social failure, 11:29470 (RA;DE)
Possibilities and limits of community biogas plants in the frame work of biogas propagation strategy in Viet Nam, 11:29477 (RA;DE)
Potential and development of biogas technology in Burundi: Options and constraints, 11:29465 (RA;DE;In French)
Primary approach to the engineering of centralized biogas supply system in Shanghai outskirts, 11:29467 (RA;DE)
Variants of biogas supply for the fictitious village of 'Rima', South East Asia, (threshold country). Case study, 11:29463 (RA;DE)
Chemical Explosions
Gas explosion characterization, wave propagation (small-scale experiments). Vol. 1, 11:30509 (R;FR)
Government Policies
Promotion of biogas in rural Thailand by the Population and Community Development Association (PDA), 11:29476 (RA;DE)
Oxidation
Chemical kinetics of hydrocarbon oxidation in gaseous detonations, 11:29489 (J;US)
Pyrolysis
Biomass thermochemical conversion program. 1985 annual report, 11:29486 (R;US)
Research Programs
FAL-biogas R/D project, 11:29482 (RA;DE)
Uses
Attempt of the biogas development and utilization. The introduction of the community biogas digesters and biogas distribution to each family in an agricultural research institute, 11:29468 (RA;DE)
Biogas technology for water pumping in Botswana, 11:29464 (RA;DE)
Electrical control of a cogeneration set in parallel mains operation or in stand-by operation, 11:29480 (RA;DE)
Implementation of biogas strategy in livestock disciplines in Thailand, 11:29475 (RA;DE)
India's experiment with community biogas plants. Case study, 11:29500 (RA;DE)
Multiple utilization of the biomass, 11:29466 (RA;DE)
Possibilities and limits of community biogas plants in the frame work of biogas propagation strategy in Viet Nam, 11:29477 (RA;DE)
Potential and development of biogas technology in Burundi: Options and constraints, 11:29465 (RA;DE;In French)

Primary approach to the engineering of centralized biogas supply system in Shanghai outskirts, 11:29467 (RA;DE)
Variants of biogas supply for the fictitious village of 'Rima', South East Asia, (threshold country). Case study, 11:29463 (RA;DE)
Yields
Non-aceticlastic methanogenesis from acetate: acetate oxidation by a thermophilic syntrophic coculture, 11:29487 (J;DE)
METHANOGENIC BACTERIA
Growth
Non-aceticlastic methanogenesis from acetate: acetate oxidation by a thermophilic syntrophic coculture, 11:29487 (J;DE)
METHANOL
Oxidation
Chemical kinetics of hydrocarbon oxidation in gaseous detonations, 11:29489 (J;US)
Solvent Properties
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
Thermodynamic Properties
Thermodynamic properties state equations of pure methanol and methanol-LiBr . $ZnBr_2$ solutions used in vapor absorption refrigeration and air-conditioning cycle, 11:29595 (RA;US)
METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Corrosive Effects
The effect of alcohol fueling on diesel engine durability, 11:30046 (B;US)
Performance Testing
Research and development of alcohol fuel useage in spark-ignited engines, 11:30069 (R;US)
The effect of alcohol fueling on diesel engine durability, 11:30046 (B;US)
METHANOL PLANTS
Feasibility Studies
MINO feasibility study. Concluding report (Pilot plant for gasification of peat and wood), 11:29153 (R;SE)
METHYL ALCOHOL
See METHANOL
METHYL IODIDE
Photochemical Reactions
Photochemical method for radioiodine abatement, 11:29311 (R;CA)
METHYL METHACRYLATE
Absorption Spectroscopy
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
Isomers
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
METHYL PHENOLS

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Beam Dumps
Active beam dump module design for MFTF-B, 11:31206 (J;US)
Computerized Simulation
Modeling and optimization of a test-cell upgrade for MFTF-B operating in the high neutron wall loading mode, 11:31188 (J;US)
Plasma engineering models of tandem mirror devices with high-field test-cell inserts, 11:30996 (J;US)
Cryopumps
Cryopumping hydrogen isotope mixtures in MFTF-B with and without argon adsorbent, 11:31254 (J;US)
Design
Modeling and optimization of a test-cell upgrade for MFTF-B operating in the high neutron wall loading mode, 11:31188 (J;US)
Magnetic Fields
Magnet alignment in MFTF-B, 11:31261 (BA;US)
Neutral Atom Beam Injection
Design of vacuum systems for MFTF-B neutral beamlines, 11:31205 (J;US)
Performance
The Mirror Fusion Test Facility (MFTF-B)--status, 11:31118 (J;US)
Plasma Confinement
Plasma engineering models of tandem mirror devices with high-field test-cell inserts, 11:30996 (J;US)
Plasma Simulation
Modeling and optimization of a test-cell upgrade for MFTF-B operating in the high neutron wall loading mode, 11:31188 (J;US)
Shields
MFTF-α+T shield design, 11:31155 (J;US)
Vacuum Systems
Design of vacuum systems for MFTF-B neutral beamlines, 11:31205 (J;US)
Wall Loading
Modeling and optimization of a test-cell upgrade for MFTF-B operating in the high neutron wall loading mode, 11:31188 (J;US)
MHD GENERATORS
Anodes
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Cathodes
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Electrical Faults
Distribution of electric fault currents in MHD faraday generators, 11:31267 (BA;US)
MICROBIAL PROCESSES
See BIOCONVERSION
MICROCOSMS
Uses
Use of aquatic microcosms for hazard identification, 11:30611 (RA;US)
MICRO-SCALE HYDROELECTRIC POWER PLANTS
Demonstration Programs
Microhydropower development in the United States: a demonstration project, 11:29492 (BA;CA)
MICROWAVE RADIATION

MIRRORS
Design
Extreme ultraviolet multilayer reflectors, 11:30341 (R;US)
Fabrication
Extreme ultraviolet multilayer reflectors, 11:30341 (R;US)
Mathematical Models
Spectral and parameter estimation problems arising in the metrology of high performance mirror surfaces, 11:30955 (R;US)
Protective Coatings
Thin film coatings for improved alpha/epi, 11:29542 (RA;US)
MIRRORS (MAGNETIC)
See MAGNETIC MIRRORS
MISGURNUS
See FISHES
MISSISSIPPI
Salt Deposits
Evaluation of the structure and stratigraphy over Richton Dome, Mississippi, 11:30738 (R;US)
MISSOURI
Dolomite
Geochemistry and origin of regional dolomites. Final report, July 15, 1983-July 14, 1985, 11:30758 (R;US)
MITES
Population Dynamics
Long-term ecological study in the Oak Ridge area. III. The oribatid mite fauna in pine litter, 11:30577 (J;US)
MIXED OXIDE FUELS
Uranium dioxide mixed with other oxides.
Mass Spectroscopy
High temperature mass spectrometry study on fast-neutrons-nuclear-reactor irradiated fuel, 11:29806 (R;FR)
MIXERS
Design
Design of a mixing system for simulated high-level nuclear waste melter feed slurries, 11:29410 (R;US)
Performance Testing
Design of a mixing system for simulated high-level nuclear waste melter feed slurries, 11:29410 (R;US)
MIXING
Not for CONFIGURATION MIXING.
Mathematical Models
Modeling of convective mixing downstream of separately heated annuli, 11:30378 (R;US)
MOBILE REACTORS
Designed to be movable while in operation.
See also SPACE POWER REACTORS
Design
Design, manufacturing and commissioning of mobile unit for EDF (Dow Chemical process), 11:29358 (RA;US)
MOBILITY
Not for material movement; see also TRANSPORT.
Control
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)

MODIFICATIONS
Cost
Great Plains Coal Gasification Plant start-up and modification report, 11:29154 (R;US)
Economics
Cost-effectiveness studies as part of an ALARA program, 11:29830 (R;US)
MOLDS (CASTING)
See CASTING MOLDS
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULES
See also POLYATOMIC MOLECULES
Dynamics
Dynamical studies of molecular systems. Final progress report, February 1, 1985-January 31, 1986, 11:30194 (R;US)
Spectra
Exact thermal rotational spectrum of a two-dimensional rigid rotor obtained using Gaussian wave packet dynamics, 11:30817 (J;US)

MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Catalyst Supports
Integrated current collector and catalyst support, 11:29984 (P;US)
Design
Electrolyte reservoir for carbonate fuel cells, 11:29985 (P;US)
Integrated current collector and catalyst support, 11:29984 (P;US)
Electrodes
Electrolyte reservoir for carbonate fuel cells, 11:29985 (P;US)
Integrated current collector and catalyst support, 11:29984 (P;US)
Electrolytes
Coated powder for electrolyte matrix for carbonate fuel cell, 11:29986 (P;US)
Electrolyte reservoir for carbonate fuel cells, 11:29985 (P;US)
Erosion
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Fabrication
Coated powder for electrolyte matrix for carbonate fuel cell, 11:29986 (P;US)
Performance
The role of heat transfer in molten carbonate fuel cell performance, 11:29987 (B;US)
Research Programs
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Thermal Conduction
The role of heat transfer in molten carbonate fuel cell performance, 11:29987 (B;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Corrosive Effects
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
MOLYBDENUM
Activation Analysis
Certification of carbon and nitrogen in molybdenum (BCR No. 23), 11:30178 (R;FR)
Calibration Standards
Certification of carbon and nitrogen in molybdenum (BCR No. 23), 11:30178 (R;FR)
Catalytic Effects
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
MOLYBDENUM 92 TARGET
Neon 20 Reactions
X detection in heavy ion induced reactions. Application to the lifetime measurement of a compound nucleus, 11:30912 (R;FR;In French)
MOLYBDENUM ALLOYS
See also HASTELLOYS
INCONEL 625
STAINLESS STEEL-316
Materials Testing
Development of ferritic steels for reduced activation: the US program, 11:30081 (R;US)
Physical Radiation Effects
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys, 11:30083 (R;US)
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)
MOLYBDENUM COMPLEXES
Chemical Preparation
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-Cl)Mo(CO)(PF_2NHCH_3), 11:30231 (J;US)
Crystal Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-Cl)Mo(CO)(PF_2NHCH_3), 11:30231 (J;US)
Decomposition
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Electronic Structure
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
Excited States
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
Molecular Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_3Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-Cl)Mo(CO)(PF_2NHCH_3), 11:30231 (J;US)
Normal-Mode Analysis
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
Oxidation
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Radiolysis
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
Reduction
Pulse-radiolysis study of mixed-valence Mo/sup IV,V/ complexes of EDTA, L-cysteine, and oxalate, 11:30303 (J;US)
MONITORED RETRIEVABLE STORAGE
Cooling Systems
Temperature history for canistered fuel lag storage areas during the loss of cooling air at the receiving and handling building of the MRS Facility, 11:29302 (R;US)
Design
Staff evaluation of US Department of Energy proposal for monitored retrievable storage, 11:29300 (R;US)
Evaluation
Staff evaluation of US Department of Energy proposal for monitored retrievable storage, 11:29300 (R;US)
Heat Transfer
Temperature history for canistered fuel lag storage areas during the loss of cooling air at the receiving and handling building of the MRS Facility, 11:29302 (R;US)
Storage Facilities
Simulation of the MRS receiving and handling facility, 11:29423 (BA;US)
MONITORS
See also RADIATION MONITORS
Design
High resolution in situ ultrasonic corrosion monitor, 11:29807 (P;US)

Portable monitor for solar radiation that accumulates irradiance histograms for 32 leaf-mounted sensors, 11:30505 (J;NL)
Meetings
Review of the OECD specialist meeting on continuous monitoring techniques for assuring coolant circuit integrity, 11:29870 (J;US)
MONITORS (RADIATION)
See RADIATION MONITORS
MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS
MONOCARBOXYLIC ACIDS
See also ABSCISIC ACID
DODECANOIC ACID
FORMIC ACID
HEXADECANOIC ACID
OCTADECANOIC ACID
Labelling
Synthesis and biological evaluation of (E)-19-iodo-3,3-dimethyl-18-nonadecenoic acid, a new dimethyl-branched long-chain fatty acid to evaluate regional myocardial fatty acid uptake, 11:30661 (R;US)
Subcellular Distribution
Synthesis and biological evaluation of (E)-19-iodo-3,3-dimethyl-18-nonadecenoic acid, a new dimethyl-branched long-chain fatty acid to evaluate regional myocardial fatty acid uptake, 11:30661 (R;US)
Tissue Distribution
Synthesis and biological evaluation of (E)-19-iodo-3,3-dimethyl-18-nonadecenoic acid, a new dimethyl-branched long-chain fatty acid to evaluate regional myocardial fatty acid uptake, 11:30661 (R;US)
MONOCHROMATORS
Design
Pulsed-neutron monochromator, 11:30492 (P;US)
MONOCLONAL ANTIBODIES
Cross-Linking
Test of a theory relating to the cross-linking of IgE antibody on the surface of human basophils, 11:30626 (J;US)
MONOCRYSTALS
See also WHISKERS
Crystal Growth
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
Mechanical Properties
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
Structural Chemical Analysis
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
MONOPOLES
See also MAGNETIC MONOPOLES
Introduction to monopole-fermion dynamics, 11:30867 (RA;JP)
Meetings
Proceedings of the workshop on 'monopoles and proton decay', 11:30822 (R;JP)
Stability
Stability of SU(2) monopole in the presence of chiral fermions analysed on computers, 11:30858 (R;XA)
MONOSACCHARIDES
Labelling
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 11:30652 (R;US)
Tissue Distribution
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 11:30652 (R;US)
MONTANA

Sheep
Ural-Tweed bighorn sheep - wildlife mitigation project. Annual report, 1 September 1984-31 December 1985, 11:30590 (R;US)
MORBIDITY
See DISEASE INCIDENCE
MORTALITY
Mathematical Models
Thyroid effects, 11:30695 (RA;US)
MOS TRANSISTORS
Metal Oxide Silicon transistors.
Physical Radiation Effects
Activation energies of recovery of the oxide charge created by ionizing pulse, energies being taken related to room temperature during irradiation and related to process oxidation temperature, 11:30150 (R;FR;In French)
MOSSES
Comparative Evaluations
Retention of simulated fallout particles by lichens and mosses, 11:30587 (J;US)
MOUNTAINS
See also YUCCA MOUNTAIN
Orogenesis
Structure and evolution of the Horse Heaven Hills in South-Central Washington, 11:29414 (R;US)
MULE DEER
See DEER
MULTI-CHANNEL ANALYZERS
Performance Testing
Performance report for Stanford/SLAC Multi-Channel Sample-and-Hold Device, 11:30457 (J;US)
MULTIPROCESSORS
See ARRAY PROCESSORS
MULTIVARIATE ANALYSIS
Zero models and pole models for multivariable systems, 11:30960 (R;US)
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
Anodes
Charge division using carbon filaments for obtaining coordinate information from detection of single electrons, 11:30478 (J;US)
Efficiency
Mesh chambers for positron emission tomography, 11:30666 (J;US)
Filaments
Charge division using carbon filaments for obtaining coordinate information from detection of single electrons, 11:30478 (J;US)
Performance
Properties of a barium fluoride-TMAE-multiwire proportional chamber detector using a large single crystal, 11:30451 (J;US)
Spatial Resolution
Mesh chambers for positron emission tomography, 11:30666 (J;US)
Time Resolution
Mesh chambers for positron emission tomography, 11:30666 (J;US)

MX DEVICES
See MFTF DEVICES
MYOCARDIUM
Single Photon Emission Computed Tomography
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1985, 11:30663 (R;US)

N

NAI DETECTORS
Performance
Examination of the role of detection systems in quantitation and image quality in PET, 11:30439 (J;US)
Highly segmented NaI(Tl) detector with vacuum photodiode readout for measuring electromagnetic showers at the CERN ISR, 11:30485 (J;NL)
NAPHTHA
Boiling point range 0-204°C.
Inventories
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
NAPHTHALENE
Hydrogenation
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Phosphorescence
Effect of high pressure on critical concentration energy transport in isotopically mixed naphthalene crystals, 11:30255 (J;US)
Solvent Properties
Phase behavior of coal fluids: data for correlation development. Report for the period: November 1, 1985-January 31, 1986, 11:29176 (R;US)
NAPHTHOLS
Chemical Preparation
Synthesis, rapid resolution, and determination of absolute configuration of racemic 2,2'-binaphthyldiyl crown ethers and analogues via β-cyclodextrin complexation, 11:30260 (J;US)
Chemical Reactions
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986, 11:29182 (R;US)
Configuration
Synthesis, rapid resolution, and determination of absolute configuration of racemic 2,2'-binaphthyldiyl crown ethers and analogues via β-cyclodextrin complexation, 11:30260 (J;US)
Synthesis
Synthesis of oxygen-18 enriched phenol and naphthol from $^{18}O_2$, 11:30278 (J;GB)
NAPHTHOLS-ALPHA
See NAPHTHOLS
NAPHTHOLS-BETA
See NAPHTHOLS
NATIONAL DEFENSE

Decision Making
Simple ballistic-missile-defense model to help decision makers, 11:30517 (J;US)
Planning
Simple ballistic-missile-defense model to help decision makers, 11:30517 (J;US)
NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY
NATURAL GAS
Environmental Effects
Ecological benefits of natural gas. A choice of illustrative papers, 11:30542 (R;DE;In German)
NATURAL GAS DEPOSITS
Seismic Surveys
Acoustic velocity measurements in materials using a regenerative method, 11:29232 (P;US)
NATURAL GAS INDUSTRY
Energy Consumption
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume IA. Appendices with 1975 data. Final report, 11:29946 (R;US)
Field Production Equipment
Costs and indices for domestic oil and gas field equipment and production operations, 1985, 11:29245 (R;US)
Offshore Operations
Offshore oil and gas. A bibliography, 11:29230 (R;GB)
NEGATIVE IONS
See ANIONS
NEODYMIUM
Isotope Ratio
Removal of isobaric interferences by resonance ionization mass spectrometry, 11:30188 (J;US)
NEODYMIUM LASERS
Design
Efficient generation of tunable radiation below 100 nm in krypton, 11:30370 (BA;US)
Extreme Ultraviolet Radiation
Efficient generation of tunable radiation below 100 nm in krypton, 11:30370 (BA;US)
NEON
Radiolysis
Excitation of aromatic hydrocarbons in electron beam irradiated rare gas-hydrocarbon mixtures, 11:30250 (J;US)
NEON 20 REACTIONS
Angular Correlation
Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions, 11:30906 (R;JP)
Charge-Exchange Reactions
Excitation of the Δ resonance in relativistic heavy ion charge exchange reactions, 11:30905 (RA;US)
Coincidence Spectrometry
Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions, 11:30906 (R;JP)
Compound-Nucleus Reactions
X detection in heavy ion induced reactions. Application to the lifetime measurement of a compound nucleus, 11:30912 (R;FR;In French)
Quasi-Elastic Scattering
Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions, 11:30906 (R;JP)
Total Cross Sections
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
NEOPLASMS
Neutron Therapy
Single-ring magnetic cusp low gas pressure ion source, 11:30668 (P;US)
NEPAL
Biomass Conversion Plants
Socio-economic impacts of community biogas plants in Nepal, 11:29474 (RA;DE)

NEPTUNIUM
Adsorption
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Radiochemistry
Radiochemistry of uranium, neptunium and plutonium: an updating, 11:30311 (R;US)
NETHERLANDS
Service Sector
Electricity consumption in the tertiary sector (The Netherlands), 11:29952 (RA;US)
NETWORKS (COMPUTER)
See COMPUTER NETWORKS
NEUTRAL BEAM SOURCES
Computerized Control Systems
Expert system to control a fusion energy experiment, 11:31084 (R;US)
NEUTRINO DETECTION
Background Noise
Reactor antineutrino background at Gran Sasso, 11:30424 (R;FR)
NEUTRINO OSCILLATION
Neutrino oscillation, 11:30828 (RA;JP)
NEUTRINOS
See also ELECTRON NEUTRINOS
Rest Mass
Massive neutrinos in particle physics and astrophysics, 11:30872 (R;US)
NEUTRON ABSORBERS
Detection
Method and apparatus for determining the content and distribution of a thermal neutron absorbing material in an object, 11:30479 (P;US)
NEUTRON ACTIVATION ANALYSIS
See NEUTRON REACTIONS
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON DETECTION
Computerized Simulation
Using last event estimator for detection calculations, 11:30945 (R;FR)
Plastic Scintillation Detectors
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)
Polarimeters
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)
NEUTRON DETECTORS
See also SELF-POWERED NEUTRON DETECTORS
Design
Method and apparatus for determining the content and distribution of a thermal neutron absorbing material in an object, 11:30479 (P;US)
NEUTRON DIFFUSION EQUATION
Asymptotic Solutions
Asymptotic time dependent neutron transport in multidimensional systems, 11:30944 (R;EG)
Numerical Solution
Geometry-independent approach to coarse-mesh neutron diffusion calculations, 11:29793 (R;US)
NEUTRON DOSIMETRY
Calibration Standards
Effective threshold cross sections for sulphur and indium fast neutron reactions, 11:30493 (J;GB)
Proportional Counters
A new type of REM measuring instrument, 11:30440 (J;US)
Tissue-Equivalent Detectors
A new type of REM measuring instrument, 11:30440 (J;US)
NEUTRON FLUX DENSITY
See FLUX DENSITY
NEUTRON REACTIONS
Charge Exchange
Future possibilities for (n,p) studies at intermediate energies, 11:30941 (BA;US)
Cross Sections
Evaluation of neutron nuclear data of ^{7}Li for JENDL-3, 11:30902 (R;JP)
Evaluation of neutron nuclear data of ^{6}Li for JENDL-3, 11:30901 (R;JP)
Evaluation of neutron nuclear data of ^{9}Be for JENDL-3, 11:30903 (R;JP)
Neutron nuclear data of ^{9}Be adopted in JENDL-2, 11:30900 (R;JP)
Neutron nuclear data of ^{7}Ni adopted in JENDL-2, 11:30899 (R;JP)
Giant Resonance
Future possibilities for (n,p) studies at intermediate energies, 11:30941 (BA;US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Design
Single-ring magnetic cusp low gas pressure ion source, 11:30668 (P;US)
NEUTRON SPECTROMETERS
Performance
Improved constant-Q spectrometer for pulsed neutron sources, 11:30486 (J;NL)
Pulsed Neutron Techniques
Improved constant-Q spectrometer for pulsed neutron sources, 11:30486 (J;NL)
NEUTRON-DEFICIENT ISOTOPES
Nuclear Structure
Nuclear structure studies far from the line of beta stability, 11:30930 (R;US)
NEUTRON-GAMMA LOGGING
Response Functions
Simulated borehole for ore depth evaluation by neutron capture gamma-ray technique using Pu/Be neutron source, 11:30507 (R;EG)
NEUTRON-RICH ISOTOPES
Nuclear Structure
Nuclear structure studies far from the line of beta stability, 11:30930 (R;US)
NEUTRONS

NICKEL
Catalytic Effects
Coal liquefaction study under the nonisothermal reaction temperature. Quarterly progress report, January-March 1986, 11:29162 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Environmental Transport
Division of Biogeochemical Ecology FY-1985 highlights, 11:30760 (RA;US)
Fracture Properties
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Hydrogen Embrittlement
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Stress Corrosion
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
Surface Properties
Dynamics of dissociative adsorption of hydrogen on Ni(100), 11:30216 (J;US)
Tissue Distribution
Electrothermal atomic absorption spectrophotometry of nickel in tissue homogenates, 11:30654 (J;US)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:30729 (J;NL)
NICKEL 58
Isotope Separation
Selective heating and separation of isotopes in a metallic plasma, 11:31012 (BA;US)
NICKEL ALLOYS
See also HASTELLOYS
MARAGING STEELS
NICKEL BASE ALLOYS
NICKEL STEELS
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)
NICKEL BASE ALLOYS
Corrosion Resistance
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)
Materials Testing
FY 1984 and FY 1985 geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:29639 (R;US)
Oxidation
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)
Physical Radiation Effects
Radiation-induced segregation in light-ion bombarded Ni-8% Si, 11:30088 (R;US)
Protective Coatings
High temperature oxidation and hot corrosion of nickel and cobalt based superalloys, 11:30102 (R;CA)
NICKEL BORIDES
Crystal Growth
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
Mechanical Properties
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
Structural Chemical Analysis
Crystal growth and properties of trinickel boride, Ni_3B, 11:30140 (J;NL)
NICKEL CHLORIDES
Biological Effects
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:30729 (J;NL)
NICKEL COMPLEXES
Catalytic Effects
Mechanistic investigation of carbon-carbon bond formation in the reduction of alkyl halides by organonickel complexes in aqueous solution (R'X (R' = CH_3, C_2H_5, 1-C $_3H_7$, 2-C_3H_7, and $PhCH_2$; X = Cl, Br, I) $RNi(tmc)^+$ (R = C_2H_5, C_3H_7, and CH_3-c-C_6H_9; tmc = (1R,4R,8S,11S)-1,4,8,11-tetramethyl-1,4,8,11-tetraazacyclotetradecane)), 11:30247 (J;US)
Oxidation
Kinetics and mechanism of the alkylnickel formation in one-electron reductions of alkyl halides and hydroperoxides by a macrocyclic nickel(I) complex (Ni(IR, 4R 8S, 11S - tmc)$^+$; tmc = 1,4,8,11-tetramethyl-1,4,8,11-tetraazacyclotetradecane; and R = CH_3, C_2H_5, C_3H_7, or $CH_3CH(CH_2)_3$ CH_3 + c - $C_6H_9CH_3$), 11:30246 (J;US)
Photochemical Reactions
Photoreduction of benzophenone by amino acids, aminopolycarboxylic acids and their metal complexes: a laser-flash-photolysis study, 11:30296 (J;GB)
NICKEL COMPOUNDS
See also NICKEL BORIDES
NICKEL CHLORIDES
NICKEL OXIDES
Chemical Radiation Effects
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:30306 (J;US)
Polymerization
Raman spectroscopy of polymers of metal protoporphyrin free acids on metal electrodes, 11:30283 (J;US)
NICKEL OXIDES
Impurities
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
NICKEL STEELS
Fracture Properties
Application of the key curve and multi-specimen techniques to dynamic J-R Curve testing of alloy steel, 11:30104 (R;US)
Optimization
Design of tough ferritic steels for cryogenic use, 11:30100 (R;US)
NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES
NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
NIOBIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
NIOBIUM 95
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 625
Creep
Verification tests of a high-temperature transverse creep model for Zr-2.5 wt % Nb pressure tubes, 11:30070 (R;CA)

Phase Transformations
Model for growth of beta-phase particles in zirconium-2.5 wt% niobium, 11:30119 (R;CA)
Stability
Thermal aging effects in refractory metal alloys, 11:29786 (R;US)
NIOBIUM COMPOUNDS
See also NIOBATES
NIOBIUM OXIDES
Crystal-Phase Transformations
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Formation Free Energy
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Specific Heat
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Stability
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
NIOBIUM OXIDES
Crystal Structure
Partial structure-field map for $A^{3+}B^{5+}O_4$ compounds, 11:30135 (J;NL)
NITRATES
See also PETN
PLUTONIUM NITRATES
URANYL NITRATES
Diffusion
Transport of nitrate from a large cement based waste form, 11:29436 (R;US)
Fluorescence
Kinetic study of reactions important in aromatic hydrocarbon combustion. Final report, August 1, 1982-July 31, 1985, 11:30234 (R;US)
Pyrolysis
Fourier transform infrared spectroscopic study of the thermal stability of peroxyacetyl nitrate, 11:30256 (J;US)
Solubility
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)
Thermodynamic Properties
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)
NITRIC ACID
Ecological Concentration
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
NITRIC OXIDE
NO.
Absorption Spectroscopy
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
Air Pollution Monitoring
Nitric oxide (NO) emissions from combustion of retorted oil shale, 11:29282 (BA;US)
Chemisorption
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
Desorption
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
Emission
Nitric oxide (NO) emissions from combustion of retorted oil shale, 11:29282 (BA;US)
Normal-Mode Analysis
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
NITRO COMPOUNDS
See also NITROBENZENE
NITROMETHANE
Decomposition
Photooxidation of 2,4-dinitrotoluene in aqueous solution in the presence of hydrogen peroxide, 11:30612 (J;US)
Water Chemistry
Photooxidation of 2,4-dinitrotoluene in aqueous solution in the presence of hydrogen peroxide, 11:30612 (J;US)
NITROBENZENE
Infrared Spectra
Identification of nonvolatile coal derived products via chromatography coupled with on-line FTIR detection. Quarterly progress report, September 1-November 30, 1985, 11:29183 (R;US)
Liquid Column Chromatography
Identification of nonvolatile coal derived products via chromatography coupled with on-line FTIR detection. Quarterly progress report, September 1-November 30, 1985, 11:29183 (R;US)
NITROGEN
Activation Analysis
Certification of carbon and nitrogen in molybdenum (BCR No. 23), 11:30178 (R;FR)
Adsorption
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Adsorption Isotherms
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Chemical Explosions
Gas explosion characterization, wave propagation (small-scale experiments). Vol. 1, 11:30509 (R;FR)
Gas explosion characterization, wave propagation (half-scale experiments). Vol. 2, 11:30510 (R;FR)
Combustion Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems. Quarterly report No. 3, 11:29187 (R;US)
Metabolism
Influence of shade on the growth and nitrogen assimilation of developing fruits on bell pepper, 11:30656 (J;US)
Nitrogen regeneration by the subtropical marine copepod Eucalanus pileatus, 11:30657 (J;GB)
NITROGEN 13
Radiochemistry
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
NITROGEN 16
Beta Decay
0^- to 0^+ beta decay in A = 16, 11:30904 (BA;US)
NITROGEN COMPOUNDS
See also NITRATES
NITROGEN OXIDES
Chemical Reactions
Theoretical studies of the energetics and mechanisms of chemical reactions: abstraction reactions, 11:30206 (J;US)
Molecular Structure
Ab initio molecular orbital calculation and semiempirical analysis of the vibrational frequencies and force constants of ONF and FON, 11:30211 (J;US)
Normal-Mode Analysis
Ab initio molecular orbital calculation and semiempirical analysis of the vibrational frequencies and force constants of ONF and FON, 11:30211 (J;US)
NITROGEN DIOXIDE
NO_2.
Oxidation
Kinetics of one-electron transfer reactions involving ClO_2 and NO_2, 11:30204 (J;US)
NITROGEN IONS
Recombination
Automatic measurement of characteristic quantities of nuclear plasma, 11:30968 (R;FR;In French)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES

NITROGEN DIOXIDE
Air Pollution
Forecasting future industrial SO_2 and NO/sub x/ emissions, 11:30551 (J;US)
NO/sub x/ control efforts increase, 11:30624 (RA;US)

Air Pollution Abatement
Atmospheric FBC and CFB: the European approach, 11:29222 (R;SE)
Control
Kinetics of nitrogen and sulfur reactions in combustion systems. Quarterly report No. 3, 11:29187 (R;US)
Emission
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Environmental Transport
Assessing environmental effects of oil-fuelled energy systems, 11:30527 (R;IT)
Pollution Regulations
An overview of international NO/sub x/ control regulations, 11:29229 (R;GB)
Reduction
Flue gas desulphurization and NO/sub x/ reduction, 11:29196 (R;SE)
Removal
Flue gas desulphurization and NO/sub x/ reduction, 11:29196 (R;SE)
NITROMETHANE
Chemical Reaction Yield
Production of the nitromethane aci ion by UV irradiation: its effect on detonation sensitivity, 11:30515 (J;US)
Photolysis
Production of the nitromethane aci ion by UV irradiation: its effect on detonation sensitivity, 11:30515 (J;US)
Reaction Intermediates
Production of the nitromethane aci ion by UV irradiation: its effect on detonation sensitivity, 11:30515 (J;US)
NITROSO COMPOUNDS
Binding Energy
Comparison of thionitrosyl and nitrosyl bonding in dicarbonyl(eta^5-cyclopentadienyl)chromium complexes by gas-phase ultraviolet and x-ray photoelectron spectroscopy, 11:30266 (J;US)
Genetic Effects
Saturation of repair, 11:30722 (BA;US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NMR SPECTRA
Data Analysis
Solid state NMR methods for coal science. Progress report, October 1-December 31, 1985, 11:29177 (R;US)
NMR SPECTROMETERS
Optimization
Solid state NMR methods for coal science. Progress report, October 1-December 31, 1985, 11:29177 (R;US)
NONLEPTONIC DECAY

SPENT FUELS
Burnup
Department of Energy extended burnup data base. Final report, 11:29749 (R;US)
Fission Product Release
Design and final safety analysis report for vertical fission product release apparatus in hot Cell B, Building 4501, 11:29855 (R;US)
Effects of time and other variables on fission product release rates, 11:29748 (R;US)
NUCLEAR INSURANCE
Government Policies
Price-Anderson Act Amendments Act of 1985. Hearing before the Subcommittee on Energy Research and Development of the Committee on Energy and Natural Resources, United States Senate, Ninety-Ninth Congress, First Session on S. 1225, June 25, 1985, 11:29874 (B;US)
NUCLEAR MAGNETIC RESONANCE
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
NUCLEAR MATERIALS MANAGEMENT
Accounting
Review of NRTMA statistical tests, 11:29451 (R;GB)
NUCLEAR MEDICINE
Research Programs
Fiscal year 1986 DOE budget authorization: environmental research and development. Hearings before the Subcommittee on Natural Resources, Agriculture Research and Environment of the Committee on Science and Technology, US House of Representatives, Ninety-Ninth Congress, First Session, March 20, 26, 1985, No. 38, 11:30670 (B;US)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Evaluated Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Experimental Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Historical Aspects
Reflection of the classical age in the intermediate energy physics, 11:30934 (R;JP)
Research Programs
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Theoretical Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
NUCLEAR POWER PLANTS
Compressed Gases
Safety implications associated with in-plant pressurized gas storage and distribution systems, 11:29872 (J;US)
Computer Codes
Analysis of the certification process of computer programs used in a nuclear power plant, using the management systems approach, 11:29846 (R;US)
Construction
Nuclear regulation. Oversight of quality assurance at nuclear power plants needs improvement, 11:29787 (R;US)
Control Systems
Advanced German Operator Support Systems, 11:29871 (J;US)
Cost
Historical plant cost and annual production expenses for selected electric plants, 1984, 11:29944 (R;US)
Diesel Engines
Review of issues related to improving nuclear power plant diesel generator reliability, 11:29803 (R;US)
Economic Impact
Local economic impacts associated with pure taxable capacity changes, 11:29790 (J;US)
Electrical Equipment
Taking qualification requirements into account at the different levels of engineering. Nuclear qualification of electrical equipments, 11:29799 (R;FR;In French)
Emergency Plans
Report to the NRC on guidance for preparing scenarios for emergency preparedness exercises at nuclear generating stations. Draft report for comment, 11:29851 (R;US)
Energy Conversion
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Engineered Safety Systems
Nuclear plant aging research program activities, 11:29833 (R;US)
Environmental Impacts
Stochastic models for predicting environmental impact in aquatic ecosystems, 11:30615 (RA;US)
Using aquatic simulation models for impact assessment: evaluation of monitoring programs, 11:30614 (RA;US)
Equipment
Qualification testing evaluation (QTE) program, FIN A-1051, Case 0686. Bimonthly status report, February-March 1986, 11:29797 (R;US)
Filters
Operational experiences of non-precoated type filters (super fine filter) in PWR and BWR nuclear power plants, 11:29812 (RA;US)
Fuel Assemblies
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume I. Equations and numerics, 11:29800 (R;US)
Human Factors
Application of SLIM-MAUD: a test of an interactive computer-based method for organizing expert assessment of human performance and reliability. Volume 1. Main report, 11:29853 (R;US)
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)
Human Factors Engineering
Nuclear Regulatory Commission Human Factors Program Plan. Revision 2, 11:29848 (R;US)
In-Service Inspection
Human reliability impact on inservice inspection. Review and analysis of human performance in nondestructive testing (emphasizing ultrasonics). Volume 2, 11:29792 (R;US)
Liquid Wastes
Liquid radwaste minimization efforts at Duke Power Company, 11:29367 (RA;US)
Mass
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Modifications
Handbook for quick cost estimates. A method for developing quick approximate estimates of costs for generic actions for nuclear power plants, 11:29788 (R;US)
Operating Cost
Historical plant cost and annual production expenses for selected electric plants, 1984, 11:29944 (R;US)
Personnel
TSORT - an automated tool for allocating tasks to training strategies, 11:29791 (R;US)
Power Generation
Licensed operating reactors. Status summary report, data as of February 28, 1986. Volume 10, No. 3, 11:29789 (R;US)
Pressure Vessels
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)

Quality Assurance
Nuclear regulation. Oversight of quality assurance at nuclear power plants needs improvement, 11:29787 (R;US)
Radioactive Waste Facilities
Mobile solidification system interface design considerations, 11:29369 (RA;US)
Modification of an existing radwaste facility to provide onsite low level waste storage, 11:29368 (RA;US)
Project management of radwaste retrofits, 11:29810 (RA;US)
Radioactive Waste Processing
Radwaste ion-exchange optimization, 11:29392 (RA;US)
Reactor Control Systems
State and data techniques for control of discontinuous systems, 11:29809 (R;US)
Reactor Cooling Systems
Review of the OECD specialist meeting on continuous monitoring techniques for assuring coolant circuit integrity, 11:29870 (J;US)
Reactor Instrumentation
Qualification testing evaluation (QTE) program, FIN A-1051, Case 0686. Bimonthly status report, February-March 1986, 11:29797 (R;US)
Reactor Maintenance
Recommendations to the NRC on human engineering guidelines for nuclear power plant maintainability, 11:29852 (R;US)
Reactor Materials
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
Reactor Operation
Investigation of the contributors to wrong unit or wrong train events, 11:29849 (R;US)
Licensed operating reactors. Status summary report, data as of February 28, 1986. Volume 10, No. 3, 11:29789 (R;US)
Reactor Operators
Advanced German Operator Support Systems, 11:29871 (J;US)
Reactor Protection Systems
Seismic and dynamic qualification of safety related electrical and mechanical equipment, 11:29850 (R;US)
Reactor Safety
Nuclear Safety: technical progress review, April-June 1986. Volume 27, No. 2 , 11:29866 (R;US)
Regulations
Handbook for quick cost estimates. A method for developing quick approximate estimates of costs for generic actions for nuclear power plants, 11:29788 (R;US)
Reliability
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Research Programs
D.E.R. 84 panorama E.D.F. progress report, 11:29746 (R;FR;In French)
Safety
Safety implications associated with in-plant pressurized gas storage and distribution systems, 11:29872 (J;US)
Solid Wastes
Solid waste minimization at Duke Power Company, 11:29366 (RA;US)
Valves
Evaluation of the Motor-Operated Valve Analysis and Test System (MOVATS) to detect degradation, incorrect adjustments, and other abnormalities in motor-operated valves, 11:29802 (R;US)

Chemical Preparation
New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-$(ET)_2X$ salts (X = ICl_2 and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)
Crystal Structure
New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-$(ET)_2X$ salts (X = ICl_2 and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)
Electron Spin Resonance
New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-$(ET)_2X$ salts (X = ICl_2 and

$BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Electronic Structure

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Reduction

Kinetics and mechanism of the alkylnickel formation in one-electron reductions of alkyl halides and hydroperoxides by a macrocyclic nickel(I) complex, 11:30246 (J;US)

Mechanistic investigation of carbon-carbon bond formation in the reduction of alkyl halides by organonickel complexes in aqueous solution (R'X (R' = CH_3, C_2H_5, 1-C $_3H_7$, 2-C_3H_7, and $PhCH_2$; X = Cl, Br, I) $RNi(tmc)^+$ (R = C_2H_5, C_3H_7, and CH_2-c-C_6H_9; tmc = (1R,4R,8S,11S)-1,4,8,11-tetramethyl-1,4,8,11-tetraazacyclotetradecane)), 11:30247 (J;US)

X-Ray Diffraction

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

ORGANIC CHLORINE COMPOUNDS

METHYLENE CHLORIDE

Cations

Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)

Chemical Preparation

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Chemical Reactions

Infrared multiphoton absorption and reaction of 2-chloro-1,1,1-trifluoroethane, 11:30264 (J;US)

Crystal Structure

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Dissociation

Infrared multiphoton absorption and reaction of 2-chloro-1,1,1-trifluoroethane, 11:30264 (J;US)

Electron Spin Resonance

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Electron Transfer

Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)

Electronic Structure

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Energy Absorption

Infrared multiphoton absorption and reaction of 2-chloro-1,1,1-trifluoroethane, 11:30264 (J;US)

Oxidation

Flash photolysis of 1,3-dichlorotetrafluoroacetone in the presence of oxygen. Kinetics and mechanism of the oxidation of the chlorodifluoromethyl radicals, 11:30286 (J;US)

Photolysis

Flash photolysis of 1,3-dichlorotetrafluoroacetone in the presence of oxygen. Kinetics and mechanism of the oxidation of the chlorodifluoromethyl radicals, 11:30286 (J;US)

Radicals

Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)

Reduction

Kinetics and mechanism of the alkylnickel formation in one-electron reductions of alkyl halides and hydroperoxides by a macrocyclic nickel(I) complex, 11:30246 (J;US)

Mechanistic investigation of carbon-carbon bond formation in the reduction of alkyl halides by organonickel complexes in aqueous solution (R'X (R' = CH_3, C_2H_5, 1-C $_3H_7$, 2-C_3H_7, and $PhCH_2$; X = Cl, Br, I) $RNi(tmc)^+$ (R = C_2H_5, C_3H_7, and CH_2-c-C_6H_9; tmc = (1R,4R,8S,11S)-1,4,8,11-tetramethyl-1,4,8,11-tetraazacyclotetradecane)), 11:30247 (J;US)

X-Ray Diffraction

New cation-anion interaction motifs, electronic band structure, and electrical behavior in β-(ET)^{2}X salts (X = $ICl_2\pi$ and $BrICl^-$) (β-bis(ethylenedithio)tetrathiafulvalene), 11:30245 (J;US)

Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Economic Policy
Development potential and policies in the South Arabian countries Yemen Arab Republic, People's Democratic Republic of Yemen, Sultanate of Oman, 11:29938 (R;DE)
Energy Policy
Kuwait - energy situation 1984, 11:29929 (R;DE;In German)
Market
Petroleum marketing monthly, February 1986, 11:29246 (R;US)
Metabolism
Microbial biosurfactant - physiology, biochemistry, and applications, 11:29247 (J;US)
Phase Diagrams
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Phase Studies
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
Pour Point
Experience in switching to heavier fuel oils, 11:29240 (RA;US)
Production
Kuwait - energy situation 1984, 11:29929 (R;DE;In German)
Viscosity
Experience in switching to heavier fuel oils, 11:29240 (RA;US)
PETROLEUM COKE
See COKE
PETROLEUM PRODUCTS
PETROLEUM DEPOSITS
Exploration
Organic geochemistry of continental margin and deep ocean sediments. Final report, 11:29231 (R;US)
Seismic Surveys
Acoustic velocity measurements in materials using a regenerative method, 11:29232 (P;US)
PETROLEUM INDUSTRY
Energy Consumption
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume IA. Appendices with 1975 data. Final report, 11:29946 (R;US)
Industrial sector end use. Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume I. Summary of 1976 results. Final report, 11:29947 (R;US)
Industrial Sector Energy Consumption Data Base (ECDB) for 1975 and 1976. Volume II. Part 2. Documentation of results. Final report, 11:29980 (R;US)
Field Production Equipment
Costs and indices for domestic oil and gas field equipment and production operations, 1985, 11:29245 (R;US)
Financial Data
Development of financial statements for the domestic petroleum industry, 1977, 11:29244 (R;US)
Offshore Operations
Offshore oil and gas. A bibliography, 11:29230 (R;GB)
PETROLEUM PRODUCTS
See also DIESEL FUELS
FUEL OILS
LIQUEFIED PETROLEUM GASES
Gasification
Synthetic fuel gas from petroleum coke-performance in an industrial gasifier, 11:29238 (BA;US)
PETROLEUM RESIDUES
B.P. over 1100°F, 593°C; includes oil residues, residua.
Combustion Properties
Residual fuel oil markets: the source of changes in resid quality, 11:29237 (RA;US)
Refining
Residual fuel oil markets: the source of changes in resid quality, 11:29237 (RA;US)
Uses
Residual fuel oil markets: the source of changes in resid quality, 11:29237 (RA;US)
PETROLEUM STOCKS
See INVENTORIES
PETROSIX PROCESS
Update on the American Syn-Crude/Indiana Shale Oil Project, 11:29272 (BA;US)
PETT
See POSITRON COMPUTED TOMOGRAPHY
PETTEN HIGH FLUX REACTOR
See HFR REACTOR
PHASE CHANGE MATERIALS
Use with the specific phase change material (e.g. calcium chloride) when known.
Research Programs
Inorganic compounds for passive solar energy storage. Solid-state dehydration materials and high specific heat materials. Progress report, 11:29612 (R;US)
PHASE TRANSFORMATIONS
Phi4-Field Theory
About the obtention of static critical behaviours from the renormalization group techniques of field theory, 11:30879 (R;FR;In French)
PHENANTHROLINES
Chemical Reaction Kinetics
Kinetics and mechanisms of electron transfer between blue copper proteins and electronically excited chromium and ruthenium polypyridine complexes, 11:30292 (J;US)
PHENOL
Inventories
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Synthesis
Synthesis of oxygen-18 enriched phenol and naphthol from $^{18}O_2$, 11:30278 (J;GB)
PHENOLS
See also CRESOLS
NAPHTHOLS
PHENOL
Chemical Preparation
In situ study of the hydrogenation of diphenyl ether in the presence of pyrrhotite and H_2S, 11:30257 (J;US)
PHENYLAMINE
See ANILINE
PHOSPHATE ROCKS
Chemical Analysis
Use of arsenazo-III for the determination of uranium in phosphate materials. Study of interfering elements, 11:30180 (RA;BR;In Portuguese)
Materials Handling
Air pollution control: maintenance cost savings from the washing, patching and reuse of bags used in fabric filters, 11:30406 (RA;US)

PHOSPHINES
Chemical Preparation
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_2Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-$Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Crystal Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_2Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-$Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Molecular Structure
Metal complexes of fluorophosphines. 13. Reaction of fac-$(CH_3CN)_3Mo(CO)_3$ with (methylamino)bis(difluorophosphine). X-ray crystal structure analysis of a novel binuclear molybdenum fluorophosphine carbonyl complex with a bridging chlorine atom: $(CO)_2Mo[^+$-$CH_3N(PF_2)_2]_2(\mu$-$PF_2)(\mu$-$Cl)Mo(CO)(PF_2NHCH_3)$, 11:30231 (J;US)
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
PHOSPHODIESTERASES
Code number 3.1.4.
Enzyme Activity
Enzymatic assay for calmodulins based on plant NAD kinase activity, 11:30640 (J;US)
PHOSPHORESCENCE
Pressure Dependence
Effect of high pressure on critical concentration energy transport in isotopically mixed naphthalene crystals, 11:30255 (J;US)
PHOSPHORIC ACID
Ion Exchange
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Solvent Properties
Equilibrium and kinetic studies of the reductive stripping of uranium from DEPA-TOPO reagent into aqueous phosphoric acid, 11:29424 (J;NL)
PHOSPHORUS 32
Tracer Techniques
Periphyton production and grazing rates in a stream measured with a ^{32}P material balance method, 11:30606 (J;DK)
PHOSPHORUS COMPLEXES
Chemical Preparation
Synthesis and X-ray structure of $(C_5Me_5)_2Th(\mu$-$PPh_2)_2Pt(PMe_3)$: a complex with a thorium-platinum bond, 11:30316 (J;US)
Crystal Structure
Synthesis and X-ray structure of $(C_5Me_5)_2Th(\mu$-$PPh_2)_2Pt(PMe_3)$: a complex with a thorium-platinum bond, 11:30316 (J;US)
PHOSPHORUS OXIDES
Adsorption
Ion-exchange properties of activated carbon filled with hydrous Zr(IV) and Zr(IV)-P(V) oxides, 11:30174 (J;NL)
PHOSPHORYLASES
See PHOSPHOTRANSFERASES
PHOSPHOTRANSFERASES
(Code numbers 2.7.1 to 2.7.6 and 2.7.8 to 2.7.9)
Biosynthesis
Synthesis and uptake of cytoplasmically synthesized pyruvate, Pi dikinase polypeptide by chloroplasts, 11:30629 (J;US)
Enzyme Activity
Enzymatic assay for calmodulins based on plant NAD kinase activity, 11:30640 (J;US)
Histochemical technique: a general method for quantitative enzyme assays of single cell extracts with a time resolution of seconds and a reading precision of femtomoles, 11:30634 (J;US)
Purification
Enzymatic assay for calmodulins based on plant NAD kinase activity, 11:30640 (J;US)
Radioimmunoassay
Pyruvate, Pi dikinase in bundle sheath strands as well as in mesophyll cells in maize leaves, 11:30669 (J;US)
Uptake
Synthesis and uptake of cytoplasmically synthesized pyruvate, Pi dikinase polypeptide by chloroplasts, 11:30629 (J;US)
PHOTOCHROMIC MATERIALS
Chemical Preparation
Method for the preparation of photochromic insulating crystals, 11:30171 (P;US)
Fabrication
Method for the preparation of photochromic insulating crystals, 11:30171 (P;US)
PHOTOMAGNETIC EFFECT
See VISIBLE RADIATION
PHOTOMAGNETOELECTRIC EFFECT

PHOTON TRANSPORT
Computer Codes
Diffusion approximation for modeling of 3-D radiation distributions, 11:30948 (R;US)
PHOTONS
Detection
ASP: a search for single photon events at PEP, 11:30846 (R;US)
Structure Functions
Measurement of the $F_2sup(\gamma)$ photon structure function at LEP, 11:30874 (R;FR)
PHOTOPRODUCTION
Prompt Electrons
Search of prompt electrons in the NA14 photoproduction experiment at the CERN, 11:30836 (R;FR;In French)
PHOTOSYNTHESIS
Biological Pathways
Reduced apparent photorespiration by the C_3-C_4 intermediate species, Moricandia arvensis and Panicum milioides, 11:30633 (J;US)
Potentiometry
Potentiometric titration of Photosystem II fluorescence decay kinetics in spinach chloroplasts, 11:30642 (J;NL)
Thermodynamics
Photosynthetic water splitting. Annual report, March 1, 1985-February 28, 1986, 11:29546 (R;US)
PHOTOSYNTHETIC MEMBRANES
Chemical Properties
[Mesityl]bacteriorhodopsin. The properties of an analogue of the purple membrane containing [mesityl]retinal as the chromophore, 11:30637 (J;GB)
Emission Spectra
Membrane development in the cyanobacterium, Anacystis nidulans, during recovery from iron starvation, 11:30671 (J;US)

Mass Spectroscopy
Depletion of photosystem 2 extrinsic proteins. I. Effects of O_2 and N_2 flash yields and steady state O_2 evolution, 11:29502 (R;US)

PHOTOSYNTHETIC REACTION CENTERS
Biochemical Reaction Kinetics
Depletion of photosystem 2 extrinsic proteins. I. Effects of O_2 and N_2 flash yields and steady state O_2 evolution, 11:29502 (R;US)

PHOTOVOLTAIC POWER PLANTS
Economic Analysis
Cell efficiency and module cost goals to achieve economic photovoltaic central power systems in the United States, 11:29563 (BA;US)
Meetings
Space photovoltaic research and technology 1985: high efficiency, space environment, and array technology, 11:29516 (R;US)
Sensitivity Analysis
Sensitivity analysis of central station flat-plate photovolaic systems and implications for National Photovoltaics Program planning, 11:29559 (R;US)

PHOTOVOLTAIC POWER SUPPLIES
Design
Block V module development and test results, 11:29554 (BA;US)
Field Tests
Photovoltaic array thermal behavior, 11:29562 (BA;US)
Performance Testing
Block V module development and test results, 11:29554 (BA;US)
Power Demand
Power requirements for commercial communications spacecraft, 11:29561 (RA;US)
Temperature Measurement
Photovoltaic array thermal behavior, 11:29562 (BA;US)

PHYSICAL METALLURGY
Research Programs
Chemistry research resource. Progress report, March 1986, 11:30175 (R;US)

PHYSICAL RADIATION EFFECTS
Simulation
Effect of helium on the tensile properties of several vanadium alloys, 11:31058 (RA;US)

PHYTOCHROMES
See also CHLOROPHYLL
Conformational Changes
ESR and ENDOR of bacteriopheophytin a radicals. Implications for bacteriochlorophylls in vivo, 11:30625 (J;US)
Electronic Structure
ESR and ENDOR of bacteriopheophytin a radicals. Implications for bacteriochlorophylls in vivo, 11:30625 (J;US)

PICEANCE CREEK BASIN
Geochemical Surveys
Fluorine in Colorado oil shale, 11:29276 (BA;US)
Geologic Surveys
Detailed lithologic, rock quality, and hydrologic data from four drill holes in the Central Piceance Creek Basin, Rio Blanco County, Colorado, 11:29258 (BA;US)
Hydrogeologic characterization of the Colony Shale Oil Project Area, 11:29256 (BA;US)
Hydrology
Detailed lithologic, rock quality, and hydrologic data from four drill holes in the Central Piceance Creek Basin, Rio Blanco County, Colorado, 11:29258 (BA;US)
Hydrogeologic characterization of the Colony Shale Oil Project Area, 11:29256 (BA;US)
Lithology
Detailed lithologic, rock quality, and hydrologic data from four drill holes in the Central Piceance Creek Basin, Rio Blanco County, Colorado, 11:29258 (BA;US)
Oil Shale Deposits
Detailed lithologic, rock quality, and hydrologic data from four drill holes in the Central Piceance Creek Basin, Rio Blanco County, Colorado, 11:29258 (BA;US)
Dust and preasure generated during commercial oil shale mine blasting, 11:29260 (BA;US)
Fluorine in Colorado oil shale, 11:29276 (BA;US)
Hydrogeologic characterization of the Colony Shale Oil Project Area, 11:29256 (BA;US)
Saline dissolution collapse in the Piceance Creek Basin, 11:29259 (BA;US)
Sedimentary Rocks
Elastic and viscoelastic model of the stress history of sedimentary rocks, 11:30754 (R;US)

PICOLINIC ACID
Leaching
Release of organic reagents from solidified decontamination wastes, 11:29433 (RA;US)

PIGE ANALYSIS
See PROTON REACTIONS

PIGMENT CELLS
See ANIMAL CELLS

PINACOL
Energy Transfer
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Isomerization
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Oxidation
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)
Photolysis
Photoinduced electron transfer C-C bond cleavage reactions; oxidations and isomerizations, 11:30298 (J;CA)

PINS (FUEL)
See FUEL PINS

PION MINUS-PROTON INTERACTIONS
Pion electroproduction at threshold in the inverse channel: $\pi p \rightarrow ne^+e$. Determination method of the longitudinal multipole Lsub(0+)sup(π) at small transfer. Preparation of the experiment, 11:30842 (R;FR;In French)

PION PLUS REACTIONS
Scattering Amplitudes
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
Total Cross Sections
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)

PION PLUS-PROTON INTERACTIONS
Baryonium
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
Scattering Amplitudes
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)
Total Cross Sections
High accuracy measurement of the total cross section and of the real part of the scattering amplitude $\pi^+ p$ from 2 to 14 GeV/c, 11:30841 (R;FR;In French)

PION REACTIONS
See also PION PLUS REACTIONS
Giant Resonance
Can we learn about the spin flip giant dipole resonances with pions?, 11:30940 (BA;US)
Inelastic Scattering
Spin excitations in pion inelastic scattering, 11:30939 (BA;US)
N*Resonances
Evidence for Δ-h components from pion reactions, 11:30938 (BA;US)
Spin Flip
Can we learn about the spin flip giant dipole resonances with pions?, 11:30940 (BA;US)

PION-NUCLEON INTERACTIONS
Partial Waves
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1983-April 30, 1984, 11:30854 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1982-April 30, 1983, 11:30853 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1980-April 30, 1981, 11:30852 (R;US)
Partial wave analysis of π-N, NN, and KN scattering below 2 GeV. Progress report, June 1, 1979-May 31, 1980, 11:30851 (R;US)
Partial wave analyses of scattering below 2 GeV. Progress report, May 1, 1984-April 30, 1985, 11:30855 (R;US)
Partial wave analyses of hadron scattering below 2 GeV. Progress report, May 1, 1985-April 30, 1986, 11:30856 (R;US)

PIONS
See also PIONS MINUS
Photoproduction
Pion photoproduction in nuclei, 11:30892 (R;FR)
Spin
Spin excitations in pion inelastic scattering, 11:30939 (BA;US)

PIONS MINUS
Electroproduction
Pion electroproduction at threshold in the inverse channel: $\pi p \rightarrow ne^+e$. Determination method of the longitudinal multipole Lsub(0+)sup(π) at small transfer. Preparation of the experiment, 11:30842 (R;FR;In French)

PIPELINE QUALITY GAS
See HIGH BTU GAS

PIPELINES
Environmental Impacts
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)

PIPES
Crack Propagation
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)

PLANT CELLS
Biological Adaptation
Abscisic acid accelerates adaptation of cultured tobacco cells to salt, 11:30645 (J;US)
Proteins associated with adaptation of cultured tobacco cells to NaCl, 11:30644 (J;US)
Cytochemistry
Histochemical technique: a general method for quantitative enzyme assays of single cell extracts with a time resolution of seconds and a reading precision of femtomoles, 11:30634 (J;US)

PLANTS

PLASMA
See also COLD PLASMA
COLLISIONAL PLASMA
COLLISIONLESS PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
SOLID-STATE PLASMA
Boltzmann-Vlasov Equation
Theory of the plasma edge: recycling sheaths, 11:31010 (BA;US)
Boundary Conditions
Theory of the plasma edge: recycling sheaths, 11:31010 (BA;US)
Boundary Layers
A new concept for pumping the edge plasma, 11:31237 (J;US)
Distribution Functions
Electron energy distributions and excitation rates in high-frequency argon discharges, 11:30977 (R;FR)
Modifications
Modification of a commercially available ICP for application to radioactive analyses, 11:30506 (J;US)
Proton Beams
Automatic measurement of characteristic quantities of nuclear plasma, 11:30968 (R;FR;In French)
Pumping
A new concept for pumping the edge plasma, 11:31237 (J;US)
Radiations
Model for electron cooling by radiation losses in plasmas: application to soft x-ray laser development, 11:31078 (R;US)

PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Magnetic Surfaces
Numerical determination of the magnetic field line Hamiltonian, 11:31079 (R;US)
Research Programs
Strategic framework for the magnetic fusion energy program, 11:31009 (J;US)

PLASMA DIAGNOSTICS
Calorimeters
Characterization of the TFTR plasma edge by Langmuir-calorimeter probes, 11:30980 (R;US)
Carbon Dioxide Lasers
Effects of alpha particles on the scattering function in CO_2 laser scattering, 11:30991 (J;AT)
Design
Low activation diagnostic equipment design studies, 11:31002 (J;US)
Feedback
TFTR plasma feedback systems, 11:31004 (J;US)
HgI2 Semiconductor Detectors
X-ray spectra for 10 keV less than h v less than 100 keV from the Alcator C tokamak, 11:31017 (BA;US)
Holography
S3T working group. Report 1: group aims (Time-space spectral signature), 11:30976 (R;FR;In French)
Ion Beams
Cw dye laser system for Li beam spectroscopy in a tokamak, 11:30972 (R;US)
Plasma density and poloidal field measurements on text using an injected lithium beam, 11:30971 (R;US)
Langmuir Probe
Characterization of the TFTR plasma edge by Langmuir-calorimeter probes, 11:30980 (R;US)
Magnet Coils
Note on the Mirnov signal analysis in tokamaks, 11:30992 (J;AT)
Parallel Processing
Two parallel formulations of particle-in-cell models, 11:31291 (BA;US)
Performance
Tokamak plasma density fluctuation studies using a multichannel scattering apparatus, 11:31015 (BA;US)
Physical Radiation Effects
Bremsstrahlung shielding analysis of the particle beam fusion accelerator PBFA II, 11:31220 (J;US)
Low activation diagnostic equipment design studies, 11:31002 (J;US)
Shielding analysis for the horizontal x-ray imaging system on the TFTR, 11:31001 (J;US)
Radiation Protection
Bremsstrahlung shielding analysis of the particle beam fusion accelerator PBFA II, 11:31220 (J;US)

Radioactivation
Low activation diagnostic equipment design studies, 11:31002 (J;US)
Shielding
Low activation diagnostic equipment design studies, 11:31002 (J;US)
Shielding analysis for the horizontal x-ray imaging system on the TFTR, 11:31001 (J;US)
X-Ray Spectrometers
X-ray spectra for 10 keV less than h v less than 100 keV from the Alcator C tokamak, 11:31017 (BA;US)
Zeeman Effect
Current profile diagnostic development on text using the Zeeman effect, 11:31014 (BA;US)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DISRUPTION
Plasma Simulation
Simulating the effects of plasma disruption with A 1 MA current pulse in a coaxial test fixture, 11:31006 (J;US)

PLASMA HEATING
See also HIGH-FREQUENCY HEATING
Research Programs
Strategic framework for the magnetic fusion energy program, 11:31009 (J;US)

PLASMA MACROINSTABILITIES
Computer Calculations
Finite-beta global MHD stabilities for circular and highly-elongated tokamaks with and without poloidal divertors, 11:30970 (R;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA SIMULATION
Boundary Conditions
Question of consistent boundary conditions when simulating reversed field pinch dynamics. Revision 1, 11:30986 (R;US)
Multi-Parameter Analysis
Real-time evaluation of electron and current density profile parameters on TEXTOR, 11:30973 (R;DE)

PLASMA SWITCHES
Feasibility Studies
Theoretical modeling of the plasma opening switch, 11:31020 (BA;US)
Mathematical Models
Theoretical modeling of the plasma opening switch, 11:31020 (BA;US)
Performance
Scaling experiments on plasma opening switches for inductive energy storage applications, 11:31265 (BA;US)
Scaling Laws
Scaling experiments on plasma opening switches for inductive energy storage applications, 11:31265 (BA;US)

PLASMA WAVES
Excitation
Electric and magnetic excitation of ICRF waves: eigenmodes and wave packets, 11:31023 (BA;US)

PLASMONS
Radiative Decay
Radiative decay of surface plasmons on nonspherical silver particles, 11:30115 (BA;US)

PLASTIC PROPERTIES
See PLASTICITY

PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS

PLASTIC SCINTILLATION DETECTORS
Performance
Segmented position-sensitive plastic phoswich detector, 11:30482 (J;NL)
Response Functions
Plastic scintillator response to relativistic nuclei, Z<=28, 11:30484 (J;NL)
Time-of-Flight Method
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)

PLASTICITY
Computerized Simulation
Elasto-plastic benchmark calculations. Step 1: verification of the numerical accuracy of the computer programs (LMFBR components), 11:31278 (R;FR)

PLASTICIZERS
Mineralogy
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)

PLASTICS
See also POLYSTYRENE
Sealing Materials
Sealing biogas plants with flexible plastic covers. Experiences gained with a German digester, 11:29478 (RA;DE)

PLASTOQUINONE
Biochemistry
Fermentative metabolism of Chlamydomonas reinhardtii. II. Role of plastoquinone, 11:30653 (J;US)

PLATING SOLUTIONS

PLATINUM 196
Nuclear Electric Moments
Quadrupole moment of ^{196}Pt - a crucial test of nuclear models, 11:30919 (R;AU)
Quadrupole Moments
Quadrupole moment of ^{196}Pt - a crucial test of nuclear models, 11:30919 (R;AU)

PLATINUM COMPLEXES
Chemical Preparation
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)
Chemical Reactions
Formation and reactivity of metal-ligand bonds: platinum(I) dimers and cobalt and chromium alkyls, 11:30222 (D;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Current-Drive Heating
Top-versus-side launch of lower hybrid waves in PLT, 11:30990 (J;AT)
Lower Hybrid Heating
Top-versus-side launch of lower hybrid waves in PLT, 11:30990 (J;AT)

PLUMES
Diffusion
Contribution to the study of radioactive and heavy jets discharged in the presence of a cross-stream, 11:30560 (R;FR;In French)
Opacity
Microcomputer programs for precipitator performance estimates, 11:29696 (RA;US)
Power plant plume opacity control, 11:29704 (RA;US)
Prediction of plume opacity from stationary sources, 11:30528 (RA;US)

PLUTONIUM
Adsorption
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Isotope Ratio
Removal of isobaric interferences by resonance ionization mass spectrometry, 11:30188 (J;US)
Particle Resuspension
Remedial waste management practices resulting in the decline of airborne plutonium adjacent to a liquid waste disposal ditch at the Hanford site, 11:29435 (RA;US)
Partition
Acid-split flowsheets for uranium-plutonium partitioning without a reductant, 11:29293 (R;US)
Personnel Monitoring
Results of incorporation monitoring by excretion analyses performed at the Karlsruhe Nuclear Research Center during the years 1979 until 1984, 11:30694 (R;DE;In German)

Radiochemistry
Radiochemistry of uranium, neptunium and plutonium: an updating, 11:30311 (R;US)
Radioecological Concentration
Distribution of plutonium and americium beneath a 33-year-old liquid waste disposal site, 11:30618 (J;US)
Recovery
Waste Systems progress report, March 1984-February 1985, 11:29413 (R;US)
Reduction
Reduction of plutonium(IV) using photochemically generated uranium(IV), 11:30313 (R;US)
Work Functions
Mound activities in chemical and physical research: July-December 1985, 11:30196 (R;US)

PLUTONIUM 238
Leaching
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)

PLUTONIUM 239
Ecological Concentration
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Environmental Transport
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Leaching
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)

PLUTONIUM 240
Ecological Concentration
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Environmental Transport
Plutonium and radiocesium in the water column of the Hudson River Estuary, 11:30619 (J;US)
Half-Life
Excitation function and half-life for the fission isomer sup(240m) Pu from the ^{238}U(α, 2n) sup(240m) Pu reaction, 11:30928 (R;BR)
Leaching
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)

PLUTONIUM NITRATES
Biological Effects
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)

PLUTONIUM OXIDES
Biological Effects
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNL
See BATTELLE PACIFIC NORTHWEST LABORATORIES

POINT CONTACTS
See ELECTRIC CONTACTS

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAND
Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Seasonal Thermal Energy Storage
STES newsletter: a quarterly review of seasonal thermal energy storage, 11:29988 (J;US)

POLARIMETERS
Time-of-Flight Method
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)

POLARIZED BEAMS
Beam Production
Collisonal pumping for the production of intense spin-polarized neutral BEAMS: target considerations, 11:31219 (J;US)

POLARIZED TARGETS
Nuclear Magnetic Resonance
TRIUMF polarized deuteron target NMR system, 11:30417 (R;CA)

POLLUTION ABATEMENT
Use this term for itmes that involve the prevention of pollutants at the source.
Research Programs
Federal Environmental Office annual report 1984, 11:29906 (R;DE;In German)

POLLUTION CONTROL EQUIPMENT
See also BAGHOUSES
ELECTROSTATIC PRECIPITATORS
SCRUBBERS
Design
Technical manual on hood capture systems to control process fugitive particulate emissions, 11:29728 (RA;US)
Evaluation
Evaluation of chemical stabilizers and windscreens for wind erosion control of uranium mill tailings, 11:30557 (RA;US)
Feasibility Studies
Feasibility of using parameter monitoring as an aid in determining continuing compliance of particulate control devices, 11:29741 (RA;US)
Manuals
Technical manual on hood capture systems to control process fugitive particulate emissions, 11:29728 (RA;US)
Performance
Impact of proposed acid rain legislation on power plant particulate control equipment, 11:29692 (RA;US)
Performance Testing
Evaluation of an air curtain secondary hooding system, 11:30531 (RA;US)
Evaluation of street sweeping as a means of controlling urban particulate, 11:30534 (RA;US)
Pilot demonstration of air curtain control of buoyant fugitive emissions, 11:30529 (RA;US)

POLLUTION LAWS
Cost
Framework for resolving hazardous waste cleanup liability, 11:30593 (RA;US)

POLLUTION REGULATIONS
Regulations for nonradioactive pollution only; see also CONTAMINATION REGULATIONS.
An overview of international NO/sub x/ control regulations, 11:29229 (R;GB)
Compliance
Management of active and abandoned hazardous sites under federal statutes, 11:29331 (RA;US)

POLLUTION (THERMAL)
See THERMAL POLLUTION

POLOIDAL DIVERTORS
See POLOIDAL FIELD DIVERTORS

POLOIDAL FIELD DIVERTORS
Comparative Evaluations
A comparison study of toroidal-field divertors for a Compact Reversed-Field Pinch Reactor, 11:31176 (J;US)
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)
Design
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)
Feasibility Studies
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)

POLONIUM
Activity Levels
Polonium aspects associated with the use of lead-lithium blankets in fusion applications, 11:31221 (J;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)

POLYACRYLONITRILE
See ORGANIC POLYMERS

POLYATOMIC MOLECULES
Eigenstates
Exact eigenfunctions and eigenvalues of a two-dimensional rigid rotor obtained using Gaussian wave packet dynamics, 11:30816 (J;US)
POLYCARBONATES
Absorption Spectroscopy
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
Isomers
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
POLYCRYSTALS
Nuclear Magnetic Resonance
Proton and deuterium NMR experiments in zero field, 11:30814 (R;US)
Oxidation
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
Photochemistry
Diffusion controlled and transient photocurrents of photo-oxidation reactions at polycrystalline α-Fe_2O_3, 11:30295 (J;US)
POLYCYCLIC AROMATIC AMINES
DNA Adducts
Environmental carcinogens in human target tissues in culture. Progress report, 11:30715 (R;US)
Metabolic Activation
Environmental carcinogens in human target tissues in culture. Progress report, 11:30715 (R;US)
Mutagenesis
Pacific Northwest Laboratory annual report for 1985 to the DOE Office of Energy Research. Part 1. Biomedical sciences, 11:30696 (R;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
POLYENES
See also DIENES
Radiolysis
Transient phenomena in the pulse radiolysis of retinyl polyenes. 4. Environmental effects on absorption maximum of retinal radical anion, 11:30302 (J;US)
POLYETHERS
See POLYETHYLENE GLYCOLS
POLYETHYLENE GLYCOLS
Chemical Preparation
Synthesis, rapid resolution, and determination of absolute configuration of racemic 2,2′-binaphthyldiyl crown ethers and analogues via β-cyclodextrin complexation, 11:30260 (J;US)
Chemical Reactions
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986, 11:29182 (R;US)
Configuration
Synthesis, rapid resolution, and determination of absolute configuration of racemic 2,2′-binaphthyldiyl crown ethers and analogues via β-cyclodextrin complexation, 11:30260 (J;US)
POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS
POLYETHYLENES
Phase Transformations
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
Polymerization
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
Structural Chemical Analysis
Small-angle neutron-scattering study of alkyl polyoxyethylene sulfate micelles. Effect of the number of polyoxyethylene groups on n-dodecyl polyoxyethylene sulfate in D_2O/H_2O mixtures at 25°C, 11:30263 (J;US)
POLY(ISOBUTYLENE OXIDE)
See EPOXIDES
ORGANIC POLYMERS
POLYMER FLOODING
See WATERFLOODING
POLYMERS
See also ORGANIC POLYMERS
Absorption Spectroscopy
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
Chemical Preparation
Radiation-induced reactions of polymer radicals with ruthenium tris(bipyridyl)-OH adducts in aqueous solutions, 11:30252 (J;US)
Isomers
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
Mechanical Properties
Chemistry research resource. Progress report, March 1986, 11:30175 (R;US)
Radiolysis
Radiation-induced reactions of polymer radicals with ruthenium tris(bipyridyl)-OH adducts in aqueous solutions, 11:30252 (J;US)
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYPHENYLS
See also TERPHENYLS
Acoustic ESR
Electron spin echo studies of donor-doped poly(p-phenylene) and its oligomers, 11:30272 (J;GB)
POLYSTYRENE
Polymerization
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
Sorptive Properties
Adsorption and desorption of hydrocarbons at low concentrations. Progress report, 1 December 1984-30 November 1985, 11:30237 (R;US)
Vulcanization
Correlation networks in polymeric materials determined by small-angle neutron scattering, 11:30146 (J;US)
POLYSULFIDES

POLYTHIONIC ACIDS
See OXYGEN COMPOUNDS
POPULATION DYNAMICS
Mathematical Models
Need to test assumptions of models: the population biology of sessile invertebrates on coral reefs, 11:30602 (RA;US)
Use of a population model for estimating hazards: interpretation of low pH bioassay results with respect to Norwegian trout populations, 11:30598 (RA;US)
Use of time series methods for estimating hazard, 11:30599 (RA;US)
Statistical Models
Statistical approaches for quantitatively assessing ecological impacts and risks, 11:30600 (RA;US)
PORPHYRINS
See also CHLOROPHYLL
HEMOGLOBIN
Electron Transfer
Mutual orientation effects on electron transfer between porphyrins, 11:30240 (J;US)
Polymerization
Raman spectroscopy of polymers of metal protoporphyrin free acids on metal electrodes, 11:30283 (J;US)
Raman Effect
Surface Raman scattering and electrochemistry of iron protoporphyrin IX at a polycrystalline silver electrode, 11:30282 (J;US)

Voltametry
Surface Raman scattering and electrochemistry of iron protoporphyrin IX at a polycrystalline silver electrode, 11:30282 (J;US)
PORTABLE EQUIPMENT
To be used only if portability is unusual or is the significant aspect of the equipment.
Operation
Testing and operation of a transportable volume reduction unit, 11:29363 (RA;US)
Performance Testing
Testing and operation of a transportable volume reduction unit, 11:29363 (RA;US)
PORTLAND CEMENT
Radionuclide Migration
Leach resistance of iodine compounds in Portland cement, 11:29425 (J;US)
POSITION SENSITIVE DETECTORS
Construction
A silicon vertex detector for CDF, 11:30446 (J;US)
Design
A silicon vertex detector for CDF, 11:30446 (J;US)
Feasibility tests of a high resolution sampling radial drift chamber, 11:30488 (J;NL)
Fabrication
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)
Silicon position sensitive detectors for the HELIOS (NA34) experiment, 11:30423 (R;US)
Feasibility Studies
Feasibility tests of a high resolution sampling radial drift chamber, 11:30488 (J;NL)
Performance
300-element silicon-lithium position-sensitive imaging detector for angiography, 11:30430 (J;US)
Segmented position-sensitive plastic phoswich detector, 11:30482 (J;NL)
Performance Testing
Detection of charged particles in amorphous silicon layers, 11:30428 (J;US)
Testing
Silicon position sensitive detectors for the HELIOS (NA34) experiment, 11:30423 (R;US)
POSITIVE IONS
See CATIONS
POSITRON COMPUTED TOMOGRAPHY
BGO Detectors
Examination of the role of detection systems in quantitation and image quality in PET, 11:30439 (J;US)
Multiwire Proportional Chambers
Mesh chambers for positron emission tomography, 11:30666 (J;US)
NaI Detectors
Examination of the role of detection systems in quantitation and image quality in PET, 11:30439 (J;US)
Time-of-Flight Method
System architecture for high speed reconstruction in Time-Of-Flight positron tomography, 11:30659 (R;FR)
POSTULATED PARTICLES
See also HEAVY LEPTONS
HIGGS BOSONS
MAGNETIC MONOPOLES
QUARKS
Supersymmetry
Composite quasi Nambu-Goldstone fermions, 11:30869 (RA;JP)
POTABLE WATER
See DRINKING WATER
POTASSIUM
Crystal Doping
Electron spin echo studies of donor-doped poly(p-phenylene) and its oligomers, 11:30272 (J;GB)
POTASSIUM CARBONATES
Corrosive Effects
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
POTASSIUM COMPOUNDS
See also POTASSIUM CARBONATES
POTASSIUM SULFATES
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
POTASSIUM SULFATES
Corrosive Effects
Electrochemical corrosion of iron-magnesium-aluminum spinel in molten potassium salts and coal slag, 11:29983 (J;US)
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
POTENTIAL (ELECTRIC)
See ELECTRIC POTENTIAL
POWDER RIVER BASIN
Air Quality
Uncertainties in predicting fugitive dust emissions and concentrations around western surface coal mines, 11:29201 (J;US)
Coal Mines
Uncertainties in predicting fugitive dust emissions and concentrations around western surface coal mines, 11:29201 (J;US)
POWER DEMAND
Forecasting
Annual outlook for US electric power, 1986, 11:29945 (R;US)
Forecasting electricity use in the service sector, 11:29974 (RA;US)
POWER GENERATION

Power Generation
Licensed operating reactors. Status summary report, data as of February 28, 1986. Volume 10, No. 3, 11:29789 (R;US)
Pressure Vessels
Exploratory studies of element interactions and composition dependencies in radiation sensitivity development, 11:30103 (R;US)
Reactor Materials
Exploratory studies of element interactions and composition dependencies in radiation sensitivity development, 11:30103 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report, data as of February 28, 1986. Volume 10, No. 3, 11:29789 (R;US)

POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES SPACECRAFT POWER SUPPLIES
Control Systems
Multivariable current control for electrically and magnetically coupled superconducting magnets, 11:31187 (J;US)
POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
Computerized Simulation
Spacecraft orbital power evaluation (SCOPE), 11:30396 (RA;FR)
Energy Balance
Spacecraft orbital power evaluation (SCOPE), 11:30396 (RA;FR)
PRASEODYMIUM OXIDES
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
PREAMPLIFIERS
Design
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
PREDICTION
See FORECASTING
PRENATAL IRRADIATION
Biological Radiation Effects
Axial skeleton malformations induced by 5 fluoro-2'-desoxycytidine (FCdR) and X-rays in mice of the breeding strains C57Bl/6JHanFfm, C57Bl/10JFfm, and in hamsters of the GHFfm breeding strain. A comparative evaluation considering gestation stages and dose-response-relationships, 11:30692 (R;DE;In German)
Teratogenesis
Axial skeleton malformations induced by 5 fluoro-2'-desoxycytidine (FCdR) and X-rays in mice of the breeding strains C57Bl/6JHanFfm, C57Bl/10JFfm, and in hamsters of the GHFfm breeding strain. A comparative evaluation considering gestation stages and dose-response-relationships, 11:30692 (R;DE;In German)
PRESSURE (VAPOR)
See VAPOR PRESSURE
PRESSURE VESSELS
Air
Simple blast model for structural design, 11:30513 (R;US)
Blast Effects
Simple blast model for structural design, 11:30513 (R;US)
Chromium-Molybdenum Steels
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Crack Propagation
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)
Cracks
Pressurized-thermal-shock experiments with thick vessels, 11:29796 (R;US)
Design
Historical summary of the heavy-section steel technology program and some related activities in light-water reactor pressure vessel safety research, 11:29859 (R;US)
Dosimetry
Light Water Reactor Pressure Vessel Surveillance Dosimetry Improvement Program. PSF Blind Test workshop minutes. Summary, 11:29750 (R;US)
Research Programs
Historical summary of the heavy-section steel technology program and some related activities in light-water reactor pressure vessel safety research, 11:29859 (R;US)
Testing
Historical summary of the heavy-section steel technology program and some related activities in light-water reactor pressure vessel safety research, 11:29859 (R;US)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRESTRESSED CONCRETE
Explosive Fracturing
Study of explosive demolition techniques for heavy reinforced and prestressed concrete structures, 11:29835 (R;FR)
PRICE-ANDERSON ACT
Amendments
Price-Anderson Act Amendments Act of 1985. Hearing before the Subcommittee on Energy Research and Development of the Committee on Energy and Natural Resources, United States Senate, Ninety-Ninth Congress, First Session on S. 1225, June 25, 1985, 11:29874 (B;US)
PRIMARY COOLANT CIRCUITS
Heat Transfer
Simulation of FIST tests using TRAC-BD1/MOD1, 11:29827 (R;US)
Hydraulics
Simulation of FIST tests using TRAC-BD1/MOD1, 11:29827 (R;US)
Incompressible Flow
TRIO a general computer code for reactor 3-D flows analysis. Application to a LMFBR hot plenum, 11:30376 (R;FR)
PRIMARY COSMIC RADIATION
See also COSMIC GAMMA BURSTS
Energy Spectra
Observation of ultra high energy cosmic rays($>=10^{10}$GeV), 11:30781 (RA;JP)
Magnetic Monopoles
Monopole annihilations and the knee in cosmic ray data, 11:30829 (RA;JP)
Mass Spectra
Observation of ultra high energy cosmic rays($>=10^{10}$GeV), 11:30781 (RA;JP)
PRINCETON LARGE TORUS
See PLT DEVICES
PRINTED CIRCUITS
Surface Cleaning
Determination of Cr(III) in chromic acid. Comparison of spectrophotometric and ion chromatographic methods, 11:30176 (R;US)
PROCESS SOLUTIONS
Purification
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Water Treatment
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION
PRODUCTION REACTORS
For the production of fissile materials only; see also IRRADIATION REACTORS.
Fire Hazards
Literature review of fire modelling techniques and related subjects, 11:29865 (R;GB)
PROJECTION SPARK CHAMBERS
Construction
The recent operational performance of the CERN Omega Ring Imaging Cerenkov Detector, 11:30450 (J;US)
Design
The recent operational performance of the CERN Omega Ring Imaging Cerenkov Detector, 11:30450 (J;US)
Performance
Performance of the field-shaping strips in the TOPAZ-TPC sector, 11:30453 (J;US)
Performance Testing
The recent operational performance of the CERN Omega Ring Imaging Cerenkov Detector, 11:30450 (J;US)

PROLINE
Uptake
Relationship between stress-induced ABA and proline accumulations and ABA-induced proline accumulation in excised barley leaves, 11:30675 (J;US)
PROPAGATION (WAVE)
See WAVE PROPAGATION
PROPANE
Adsorption
Adsorption and desorption of hydrocarbons at low concentrations. Progress report, 1 December 1984-30 November 1985, 11:30237 (R;US)
Combustion
Experimental investigation of the acceleration of deflagration in wake flow, 11:30323 (R;FR)
Oxidation
Chemical kinetics of propane oxidation in gaseous detonations, 11:29488 (J;US)
PROPANONE
See ACETONE
PROPELLANTS
Comparative Evaluations
Effects of wellbore liquids in propellant-based fracturing (M30 and M5), 11:29251 (R;US)
PROPENE
See PROPYLENE
PROPORTIONAL COUNTERS
See also MULTIWIRE PROPORTIONAL CHAMBERS
Computer-Aided Design
A new type of REM measuring instrument, 11:30440 (J;US)
Physical Radiation Effects
Position detection of 17-25 keV x-rays in krypton and xenon with a resolution of 18-50μm (FWHM), 11:30459 (J;US)
PROPYLENE
Hydrogenation
Supported f-element complexes: surface chemistry and catalysis. Final report, August 15, 1984-January 14, 1986, 11:30195 (R;US)
Pyrolysis
Direct determination of atom and radical concentrations in thermal reactions of hydrocarbons and other gases. Progress report, January 1-December 31, 1984, 11:30322 (R;US)
PROTACTINIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
PROTECTIVE COATINGS
Optical Properties
Thin film coatings for improved alpha/epi, 11:29542 (RA;US)
PROTEINS

PEPTIDES
PHYTOCHROMES
RHODOPSIN
Bioassay
Enzymatic assay for calmodulins based on plant NAD kinase activity, 11:30640 (J;US)
Biosynthesis
Proteins associated with adaptation of cultured tobacco cells to NaCl, 11:30644 (J;US)
Complexes
Analysis of photosynthetic antenna function in a mutant of Arabidopsis thaliana (L.) lacking trans-hexadecenoic acid, 11:30630 (J;US)
Molecular Structure
Cellular automata in cytoskeletal lattices, 11:30639 (J;NL)
Molecular Weight
Comparison of chromatographic characteristics of a series of homologous Bence-Jones proteins during size-exclusion chromatography by high-performance liquid chromatography and by Sephadex, 11:30635 (J;NL)
Purification
Comparison of chromatographic characteristics of a series of homologous Bence-Jones proteins during size-exclusion chromatography by high-performance liquid chromatography and by Sephadex, 11:30635 (J;NL)
PROTEOLIPIDS
See LIPOPROTEINS
PROTON DETECTION
Breakup Reactions
Segmented position-sensitive plastic phoswich detector, 11:30482 (J;NL)
Drift Chambers
New focal plane detector for the magnet spectrometer Big Karl, 11:30480 (J;NL)
Plastic Scintillation Detectors
Segmented position-sensitive plastic phoswich detector, 11:30482 (J;NL)
Position Sensitive Detectors
Segmented position-sensitive plastic phoswich detector, 11:30482 (J;NL)
PROTON REACTIONS
Charge-Exchange Reactions
Neutron polarimeter for (p, n) measurements at intermediate energies, 11:30487 (J;NL)
PROTON SPECTRA
Spectra Unfolding
Analysis of doublet proton spectra from laser implosion experiments, 11:31256 (J;US)
PROTON-ANTIPROTON INTERACTIONS
Particle Production
How to search for new particles at anti pp colliders, 11:30847 (BA;US)
Quantum Chromodynamics
QCD prediction for charmonium production in anti pp collisions, 11:30878 (BA;US)
PROTON-PROTON INTERACTIONS
Inclusive Interactions
Inclusive production of strange particles in 360 GeV/c PP interactions, 11:30825 (R;ES;In Spanish)
Particle Production
Inclusive production of strange particles in 360 GeV/c PP interactions, 11:30825 (R;ES;In Spanish)
PROTONS
See also COSMIC PROTONS
Decay
Proton decay in grand unified theories, 11:30868 (RA;JP)
Energy Losses
Analysis of doublet proton spectra from laser implosion experiments, 11:31256 (J;US)
Hadronic Particle Decay
Proton decay via d=5 gluino dressed graphs with flavour diagonal gluino couplings in supergravity models, 11:30859 (R;XA)
Interatomic Distances
Zero-field NMR of solid bis(μ-hydrido)decacarbonyltriosmium, 11:30203 (J;US)
Lifetime
Grand unification mass scale and proton life time in SO(10) model, 11:30883 (RA;JP)
Proton decay via d=5 gluino dressed graphs with flavour diagonal gluino couplings in supergravity models, 11:30859 (R;XA)
Meetings
Proceedings of the workshop on 'monopoles and proton decay', 11:30822 (R;JP)
Particle Decay
Proton decay: theory versus experiment, 11:30877 (R;AT)
Weak Particle Decay
Issues in monopole-catalyzed proton decay, 11:30870 (RA;JP)
Proton decay in supersymmetric models, 11:30871 (RA;JP)
PROTOPLASTS

PSI-3105 RESONANCES
Hadronic Particle Decay
DM2 results on hadronic and radiactive J/psi decays, 11:30837 (R;FR)
DM2 results on J/psi decays, 11:30839 (R;FR)
Selected results on J/psi hadronic decays from DM2 and Mark III, 11:30840 (R;FR)
Radiative Decay
DM2 results on hadronic and radiactive J/psi decays, 11:30837 (R;FR)
DM2 results on J/psi decays, 11:30839 (R;FR)

PUBLIC BUILDINGS
Energy Consumption
Electricity use in the public sector - a few examples from Denmark, 11:29962 (RA;US)
Power Demand
Electricity use in the public sector - a few examples from Denmark, 11:29962 (RA;US)
Space Heating
Analyzing the applicability of black coal in public buildings of the Ruhr District, 11:30012 (R;DE;In German)
PUBLIC UTILITIES
See also ELECTRIC UTILITIES
Planning
Utility perspective on commercial sector markets, 11:29970 (RA;US)
PULMONARY LAVAGE
See LUNGS
PULPS
See SLURRIES
PULSE DISCRIMINATORS
Design
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
PULSE GENERATORS
Electrical Insulation
Stripline insulation design analysis by partial discharge measurements, 11:29564 (R;US)
PULSE SHAPERS
Design
A surface mount amplifier-shaper-discriminator and preamplifier for the Fermilab CDF tracking chambers, 11:30471 (J;US)
Raman accumulator as fusion laser driver, 11:30504 (P;US)
PULSE STRETCHERS
See PULSE SHAPERS
PULSED FUSION REACTORS
Coolants
Fragmentation of suddenly heated liquids in ICF reactors, 11:31189 (J;US)
Design
Compact inertial confinement fusion multireactor concepts, 11:31224 (J;US)
Feasibility Studies
Compact inertial confinement fusion multireactor concepts, 11:31224 (J;US)
Inertial Confinement
Compact inertial confinement fusion multireactor concepts, 11:31224 (J;US)
Steam Turbines
Effects of pulsed operation on the lifetime of turbine rotors, 11:31253 (J;US)
PULVERIZED FUEL ASH
See FLY ASH
PUMPED LIMITERS
Design
A new concept for pumping the edge plasma, 11:31237 (J;US)
Engineering design of the ALT-II pump limiter for TEXTOR, 11:31251 (J;US)
Impurity control and vacuum pumping system design and analysis for next-generation tokamaks, 11:31153 (J;US)
Neutral pumping rates for a next step tokamak ignition device, 11:31235 (J;US)
Performance
Impurity control and vacuum pumping system design and analysis for next-generation tokamaks, 11:31153 (J;US)
Neutral pumping rates for a next step tokamak ignition device, 11:31235 (J;US)
Vacuum Pumps
Impurity control and vacuum pumping system design and analysis for next-generation tokamaks, 11:31153 (J;US)
PUMPS
Performance
Pulsatile fluidic pump demonstration and predictive model application, 11:29295 (R;US)
Seals
Shape memory alloy seals for geothermal applications, 11:29637 (R;US)
PUREX PROCESS
Flowsheets
Acid-split flowsheets for uranium-plutonium partitioning without a reductant, 11:29293 (R;US)
PURITY

Design and final safety analysis report for vertical fission product release apparatus in hot Cell B, Building 4501, 11:29855 (R;US)
Tellurium behavior in containment under light water reactor accident conditions, 11:29856 (R;US)
ECCS
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)
Studies on the effects of blockage upon LWR emergency core cooling systems. Vol. 1, 11:29840 (R;FR)
Studies on the effects of blockage upon LWR emergency core cooling systems. Vol. 2, 11:29841 (R;FR)
Fuel Assemblies
Field tests and examinations in cell of French fuel assemblies, 11:29758 (R;FR;In French)
FRAMATOME studies on high conversion water reactor concept, 11:29769 (R;FR)
Structural analysis of PWR fuel assemblies in LOCA and seismic conditions, 11:29770 (R;FR)
Fuel Cans
Welding of sule elements for nuclear reactors with solid state YAG laser using instrumentated testing equipments, 11:30075 (R;FR;In French)
Fuel Element Clusters
Experimental investigation of the effect of clad ballooning on the effectiveness of PWR emergency cooling, 11:29839 (R;FR)
In Core Instruments
In-core measurements with platinum self powered detectors in a French PWR, 11:29756 (R;FR)
Loss of Coolant
Analysis of zircaloy rewetting experiments and their implication for reactor fuel, 11:29838 (R;FR)
Comparison of TRAC-PF1/MOD1 to a no-failure UPI test in the Cylindrical Core Test Facility, 11:29844 (R;US)
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Heat transfer to a dispersed two phase flow and detailed quench front velocity research, 11:29836 (R;FR)
Study of two-dimensional effects in the core of a light water reactor during the ECC'S phase following a loss of coolant accident, 11:29837 (R;FR)
Materials Handling Equipment
Assessment of spent nuclear fuel shipping cask handling capabilities of commercial light water reactors, 11:29304 (R;US)
Mixed Oxide Fuels
Demonstration of spent-fuel measurement equipment at KWO Obrigheim facility, 11:29766 (R;FR)
Modifications
Cost-effectiveness studies as part of an ALARA program, 11:29830 (R;US)
Nuclear Fuels
Department of Energy extended burnup data base. Final report, 11:29749 (R;US)
Design and final safety analysis report for vertical fission product release apparatus in hot Cell B, Building 4501, 11:29855 (R;US)

Effects of time and other variables on fission product release rates, 11:29748 (R;US)
Pipes
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)
Pressure Vessels
Historical summary of the heavy-section steel technology program and some related activities in light-water reactor pressure vessel safety research, 11:29859 (R;US)
Light Water Reactor Pressure Vessel Surveillance Dosimetry Improvement Program. PSF Blind Test workshop minutes. Summary, 11:29750 (R;US)
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)
Radiation Doses
Cost-effectiveness studies as part of an ALARA program, 11:29830 (R;US)
Reactor Accidents
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)

Reactor Cooling Systems
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Reactor Cores
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Reactor Decommissioning
Intact decommissioning of nuclear power plants: a dose assessment, 11:29747 (R;US)
Reactor Internals
Maintenance and repair tools of the 900 MW PWR units in France, 11:29771 (R;FR;In French)
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)
Reactor Safety
Hydrogen:air:steam flammability limits and combustion characteristics at intermediate scale, 11:29861 (R;US)
Overview of Sandia's risk rebaselining/risk reduction analyses for NUREG-1150, 11:29862 (R;US)
Reactor Technology
FRAMATOME PWR technological development, 11:29767 (R;FR)
Regulations
Review of light water reactor regulatory requirements. Identification of regulatory requirements that may have marginal importance to risk. Volume 1, 11:29753 (R;US)
Research Programs
French study and research program on water cooled reactor safety, 11:29757 (R;FR;In French)
Risk Assessment
Overview of Sandia's risk rebaselining/risk reduction analyses for NUREG-1150, 11:29862 (R;US)
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)
Steam Generators
1984 Workshop on secondary-side stress corrosion cracking and intergranular corrosion of PWR steam generator tubing. Proceedings, 11:29765 (R;US)
Steam generator replacement, 11:29772 (R;FR)
Systems Analysis
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)
PYRANOMETERS
Calibration
Pyranometer comparison at INPE, Atibaia, in August 1983, 11:30497 (R;BR)
PYRENE
Chemical Preparation
Methoxybenzo[a]pyrene 4,5-oxides labeled with carbon-13: electronic effects in the NIH shift, 11:30259 (J;US)
Isomerization
Methoxybenzo[a]pyrene 4,5-oxides labeled with carbon-13: electronic effects in the NIH shift, 11:30259 (J;US)
Labelling
Methoxybenzo[a]pyrene 4,5-oxides labeled with carbon-13: electronic effects in the NIH shift, 11:30259 (J;US)
PYRHELIOMETERS
Calibration
Pyranometer comparison at INPE, Atibaia, in August 1983, 11:30497 (R;BR)
PYRIDINE
Solvent Properties
Effect of maceral properties on the comminution of coal. Technical progress report, January 1-March 31, 1986, 11:29204 (R;US)
2-PYRIDINECARBOXYLIC ACID
See PICOLINIC ACID
PYRIDINES
See also BIPYRIDINES
PYRIDINE
QUINOLINES
Chemical Reaction Kinetics
Kinetics and mechanisms of electron transfer between blue copper proteins and electronically excited chromium and ruthenium polypyridine complexes, 11:30292 (J;US)
Metabolism
In vivo studies of pyridine nucleotide metabolism in Escherichia coli and Saccharomyces cerevisiae by carbon-13 NMR spectroscopy, 11:30655 (J;US)
Photolysis
Laser flash photolytic determination of triplet yields via singlet oxygen generation, 11:30297 (J;CH)
Pyrolysis
Pyrolysis of model alkyl pyridine compounds, 11:29274 (BA;US)
PYROLYSIS
Yields
Production of a high-quality liquid fuel from coal by mild pyrolysis of coal-lime mixtures, 11:29158 (R;US)
2-PYRROLIDINECARBOXYLIC ACID
See PROLINE

Q

QUARK-ANTIQUARK INTERACTIONS
Potentials
SVZ, gluon condensate and potential models, 11:30876 (R;AT)
QUARKS
Fermi Statistics
Statistical principle and the quarks, 11:30863 (R;BR)
Mass Formulae
Mass hierarchies of quarks and leptons in a supersymmetric SP(2N) subcolor theory, 11:30864 (R;JP)
Particle Identification
How to search for new particles at anti pp colliders, 11:30847 (BA;US)
Particle Production
How to search for new particles at anti pp colliders, 11:30847 (BA;US)
QUASARS

Cosmic Ray Flux
Blazars, quasars and starbursts, 11:30800 (RA;GB)
QUASI-ELASTIC SCATTERING
Lectures
Heavy ion induced fusion/fission and barrier penetration. Lecture notes, 11:30929 (R;AU)
QUEENSLAND
Oil Shale Deposits
Pyrolysis of oil shale in supercritical toluene reaction mechanism and role of hydrogen, 11:29271 (BA;US)
QUINOLINES
Crystal Structure
Structure and spectral properties of a squarylium dye, 2,4-bis[(1-n-butyl-2(1H)-quinolylidene)methyl]-1,3-cyclobutadienediylium-1,3-diolate, 11:30241 (J;US)
Denitrification
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Hydrogenation
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 10 for the period January 1-March 31, 1986, 11:29159 (R;US)
Phase Studies
Enthalpy and phase behavior of coal derived liquid mixtures. Technical progress report, January-March 1986, 11:29178 (R;US)
Vapor Pressure
Enthalpy and phase behavior of coal derived liquid mixtures. Technical progress report, January-March 1986, 11:29178 (R;US)
Visible Spectra
Structure and spectral properties of a squarylium dye, 2,4-bis[(1-n-butyl-2(1H)-quinolylidene)methyl]-1,3-cyclobutadienediylium-1,3-diolate, 11:30241 (J;US)
QUINONES
Luminescence
Luminescence of 1,4-naphthoquinone and the vitamin K system in Shpolskii matrices at 4 K, 11:30275 (J;GB)
Photochemistry
Luminescence of 1,4-naphthoquinone and the vitamin K system in Shpolskii matrices at 4 K, 11:30275 (J;GB)

R

R CODES
Revision of Primary Standards Laboratory's methods to calculate water vapor pressures (ENHANC, RH, RHTAB), 11:31286 (R;US)
RABBITS
Contamination
Iodine in terrestrial wildlife on the US Department of Energy's Handford site in south-central Washington, 11:30585 (J;NL)
RACIAL GROUPS

RADIOACTIVE WASTE DISPOSAL
Computerized Simulation
Version of ORIGEN2 with automated sensitivity-calculation capability, 11:29398 (R;US)
Environmental Impacts
Canadian nuclear fuel waste management program, 11:29314 (R;CA)
Meetings
Scientific basis for nuclear waste management IX, 11:29420 (B;US)
Remote Handling Equipment
Development and use of a remote waste handling system for disposal of greater confinement wastes, 11:29327 (RA;US)
Research Programs
Canadian nuclear fuel waste management program, 11:29314 (R;CA)
Sealing Materials
Alternative sealing materials for radioactive waste longterm storage or disposal, 11:30153 (RA;US)
Site Selection
Geologic considerations in UMTRA Project alternate site selection process, 11:29325 (RA;US)
Waste Forms
Fuel characterization research for the Canadian Nuclear Fuel Waste Management Program, 11:29315 (R;CA)

RADIOACTIVE WASTE FACILITIES
See also WIPP
Modularized system for disposal of low-level radioactive waste, 11:29342 (RA;US)
Project management of radwaste retrofits, 11:29810 (RA;US)
Comparative Evaluations
Comparison of low-level radioactive waste management alternatives, 11:29335 (RA;US)
Computerized Simulation
Simulation of the MRS receiving and handling facility, 11:29423 (BA;US)
Design
Design of a modular radwaste facility, 11:29355 (RA;US)
Economics
Low-level volume reduction services facility, 11:29348 (RA;US)
Liquid Wastes
Estimates of secondary waste production from operations at a proespective geologic repository in tuff, 11:29393 (RA;US)
Modifications
Modification of an existing radwaste facility to provide onsite low level waste storage, 11:29368 (RA;US)
Operation
Operational procedures for receiving, packaging, emplacing, and retrieving high-level and transuranic waste in a geologic repository in tuff (NNWSI project), 11:29417 (R;US)
Performance
Operational experience of the Palisades volume reduction system: the first 12 months, 11:29387 (RA;US)
Regional Cooperation
Commercial regional incinerator facility for treatment of low-level radioactive waste, 11:29385 (RA;US)
Remedial Action
Modified hazard ranking system for sites with mixed radioactive and hazardous wastes. User manual, 11:29450 (R;US)
Remote Handling Equipment
Use of robotics for radioactive waste shipping and receiving, 11:29307 (R;US)
Site Characterization
Modified hazard ranking system for sites with mixed radioactive and hazardous wastes. User manual, 11:29450 (R;US)

Site Selection
Local government participation in the siting of a low-level radioactive waste disposal facility: the Texas experience, 11:29319 (RA;US)
Solid Wastes
Estimates of secondary waste production from operations at a proespective geologic repository in tuff, 11:29393 (RA;US)

RADIOACTIVE WASTE MANAGEMENT
Compact Commissions
Public Law 99-240: an act to amend the low-Level Radioactive Waste Policy Amendments Act of 1985. Introduced in the Senate and House of Representatives of the United States of America in Congress assembled, Ninety-Ninth Congress, January 15, 1986, 11:29419 (B;US)
Cost
New York State interim waste management cost evaluation, 11:29323 (RA;US)
Meetings
Scientific basis for Nuclear Waste Management VIII, 11:29428 (B;US)
Waste Management '85: Waste Isolation in the US - Technical Programs and Public Education. Volume 2. Waste policies and programs, low-level waste, 11:29317 (R;US)
Regional Cooperation
Public Law 99-240: an act to amend the low-Level Radioactive Waste Policy Amendments Act of 1985. Introduced in the Senate and House of Representatives of the United States of America in Congress assembled, Ninety-Ninth Congress, January 15, 1986, 11:29419 (B;US)

RADIOACTIVE WASTE PROCESSING
See also IODOX PROCESS
Equipment
Mobile liquid VR system: a cost effective alternative, 11:29349 (RA;US)
Ion Exchange
Development of sphene-based glass-ceramics for disposal of some Canadian wastes, 11:29427 (J;US)
Mobile Reactors
Design, manufacturing and commissioning of mobile unit for EDF (Dow Chemical process), 11:29358 (RA;US)
Personnel
Revised worker exposure estimates for TMI-2 radioactive waste processing and decontamination, 11:29442 (RA;US)
Portable Equipment
Mobile solidification system interface design considerations, 11:29369 (RA;US)
Testing and operation of a transportable volume reduction unit, 11:29363 (RA;US)
Research Programs
Waste Systems progress report, March 1984-February 1985, 11:29413 (R;US)

RADIOACTIVE WASTE STORAGE
See also MONITORED RETRIEVABLE STORAGE
Survey and assessment of radioactive waste management facilities in the United States. Section 2.5. Air-cooled vault storage facilities, 11:29299 (R;US)
Performance
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Risk Assessment
Geologic disposal of high-level radioactive wastes: Earth-science perspectives, 11:29401 (R;US)
Simulation
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Site Selection
Geologic disposal of high-level radioactive wastes: Earth-science perspectives, 11:29401 (R;US)
Underground Storage
Geologic disposal of high-level radioactive wastes: Earth-science perspectives, 11:29401 (R;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES

NEUTRON-RICH ISOTOPES
Radioecological Concentration
Radiation exposure rates and radionuclide concentrations in soil around the Argonne National Laboratory-West Site, 11:30581 (R;US)

RADIOMETERS
Configuration
Microwave limb sounder for stratospheric measurements, 11:30181 (R;US)

RADIONUCLIDE MIGRATION
In environment.
Waste management practices to control biological transport of radioactivity at the Hanford Site, 11:29434 (RA;US)
Computerized Simulation
Relevance of biotic pathways to the long-term regulation of nuclear waste disposal. Estimation of radiation dose to man

resulting from biotic transport: the BIOPORT/MAXI1 software package. Volume 5, 11:29446 (R;US)
Mathematical Models
Contribution to the study of radioactive and heavy jets discharged in the presence of a cross-stream, 11:30560 (R;FR;In French)
RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIONUCLIDES
See RADIOISOTOPES
RADIOSENSITIZERS
Teratogenesis
Axial skeleton malformations induced by 5 fluoro-2'-desoxycytidine (FCdR) and X-rays in mice of the breeding strains C57Bl/6JHanFfm, C57Bl/10JFfm, and in hamsters of the GHFfm breeding strain. A comparative evaluation considering gestation stages and dose-response-relationships, 11:30692 (R;DE;In German)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Electron Beams
Variations of dose distribution in high energy electron beams as a function of geometrical parameters of irradiation. Application to computer calculation, 11:30664 (R;FR;In French)
RADIOTHORIUM
See THORIUM 228
RADIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
RADIUM 226
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
RADIUM 228
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
RADON
Air Pollution Monitoring
Some measurements of the equilibrium factor for radon daughters in houses, 11:30556 (RA;US)
Radioecological Concentration
Preliminary radon testing results for the Residential Standards Demonstration Program. Program results No. 3, 11:29905 (R;US)
Some measurements of the equilibrium factor for radon daughters in houses, 11:30556 (RA;US)
RADON 210
Energy Levels
Short lived isomers in ^{211}Rn and ^{210}Rn, 11:30920 (R;AU)
Gyromagnetic Ratio
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
High Spin States
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
Isomeric Nuclei
Short lived isomers in ^{211}Rn and ^{210}Rn, 11:30920 (R;AU)
RADON 211
Energy Levels
Short lived isomers in ^{211}Rn and ^{210}Rn, 11:30920 (R;AU)
Gyromagnetic Ratio
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
High Spin States
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
Isomeric Nuclei
Short lived isomers in ^{211}Rn and ^{210}Rn, 11:30920 (R;AU)
RADON 212
Gyromagnetic Ratio
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
High Spin States
G-factors in ^{210}Rn and octupole coupling of core excited states in ^{210}Rn, ^{211}Rn and ^{212}Rn, 11:30921 (R;AU)
RAIL TRANSPORT
Computerized Simulation
U.S. Department of Energy transportation programs: computerized techniques, 11:29308 (BA;US)
RAILGUN ACCELERATORS
Design
Reconnection gun, 11:30352 (R;US)
Energy Recovery
Counterpulse railgun energy recovery circuit, 11:30400 (P;US)
Pulse Techniques
Counterpulse railgun energy recovery circuit, 11:30400 (P;US)
RAIN
See also ACID RAIN
Chemical Composition
Collection and analysis of trace metals in continental precipitation at forested sites in the Southeastern United States, 11:30524 (R;US)
RAMAN EFFECT
Molecular Models
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
Time Dependence
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
RAMAN SPECTROSCOPY
Prior to March 1983 this concept was indexed to RAMAN SPECTRA.
Light Scattering
Raman accumulator as fusion laser driver, 11:30504 (P;US)
RAMJET ENGINES
Supersonic Flow
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)
RARE EARTH COMPOUNDS
See also EUROPIUM COMPOUNDS
LANTHANUM COMPOUNDS
Crystal Structure
Partial structure-field map for $A^{3+}B^{5+}O_4$ compounds, 11:30135 (J;NL)
Solubility
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)
Thermodynamic Properties
Desolvation energies for rare-earth-metal perchlorate, chloride, and nitrate electrolytes from 0.1 m to saturation, 11:30218 (J;US)
RARE EARTH ISOTOPES
Moessbauer Effect
Rare-earth Moessbauer studies on chemical problems, 11:30228 (BA;US)
RAS AL KHAIMA
See UNITED ARAB EMIRATES
REACTION INTERMEDIATES
Adsorption
Surface-enhanced resonance Raman study of the photoreduction of methylviologen on a p-InP semiconductor electrode, 11:30285 (J;US)
REACTION PRODUCT TRANSPORT SYSTEMS
On-Line Measurement Systems
Stopped-flow technique for transit time measurement in a gas jet, 11:29804 (J;NL)

Time Measurement
Stopped-flow technique for transit time measurement in a gas jet, 11:29804 (J;NL)

REACTOR ACCIDENTS
See also LOSS OF COOLANT
ROD DROP ACCIDENTS
Fluid-Structure Interactions
Independent analysis of selected core-concrete interaction and fission product release experiments with CORCON-MOD2 and VANESA, 11:29829 (R;US)
Simulation
Analysis of zircaloy rewetting experiments and their implication for reactor fuel, 11:29838 (R;FR)

REACTOR COMPONENTS
See also BREEDING BLANKETS
FUEL ELEMENTS
REACTOR COOLING SYSTEMS
REACTOR CORES
REACTOR INTERNALS
Design
Elasto-plastic benchmark calculations. Step 1: verification of the numerical accuracy of the computer programs, 11:31278 (R;FR)

REACTOR CONTROL SYSTEMS
Design
Description of a research reactor control system using a programmable controller, 11:29817 (R;US)
State and data techniques for control of discontinuous systems, 11:29809 (R;US)
Testing
Description of a research reactor control system using a programmable controller, 11:29817 (R;US)

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
Heat Transfer
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Hydraulics
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)
TRAC-PF1/MOD1 analysis of a 200% cold-leg break in a US/Japanese PWR with four loops and 15 x 15 fuel, 11:29845 (R;US)
Monitoring
Review of the OECD specialist meeting on continuous monitoring techniques for assuring coolant circuit integrity, 11:29870 (J;US)

REACTOR CORES
See also COUPLED REACTOR CORES
Design
High flux research reactors based on particulate fuel, 11:29784 (R;US)
Fuel Elements
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Heat Transfer
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)
Hydraulics
Fluid-dynamic effects in the fuel element top nozzle area during refilling and reflooding, 11:29842 (R;FR)

REACTOR DISMANTLING
Explosive Fracturing
Study of explosive demolition techniques for heavy reinforced and prestressed concrete structures, 11:29835 (R;FR)
Feasibility Studies
Study of explosive demolition techniques for heavy reinforced and prestressed concrete structures, 11:29835 (R;FR)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS
Testing
Qualification testing evaluation (QTE) program, FIN A-1051, Case 0686. Bimonthly status report, February-March 1986, 11:29797 (R;US)

REACTOR INTERNALS
Crack Propagation
Proceedings of the second International Atomic Energy Agency specialists' meeting on subcritical crack growth. Sessions I and II. Volume 1, 11:29751 (R;US)
Second International Atomic Energy Agency Specialists' meeting on subcritical crack growth: proceedings. Sessions III and IV. Volume 2, 11:29752 (R;US)
Repair
Maintenance and repair tools of the 900 MW PWR units in France, 11:29771 (R;FR;In French)

REACTOR LATTICES
Multiplication Factors
HECTOR measurements on plutonium-uranium metal fuel, 11:29815 (R;GB)
Reactivity
HECTOR measurements on plutonium-uranium metal fuel, 11:29815 (R;GB)
Reactivity change measurements on plutonium uranium oxide fuel clusters in a plutonium uranium metal lattice in HECTOR, 11:29814 (R;GB)

REACTOR MAINTENANCE
Human Factors Engineering
Recommendations to the NRC on human engineering guidelines for nuclear power plant maintainability, 11:29852 (R;US)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS
Fracture Properties
Exploratory studies of element interactions and composition dependencies in radiation sensitivity development, 11:30103 (R;US)
Physical Radiation Effects
Exploratory studies of element interactions and composition dependencies in radiation sensitivity development, 11:30103 (R;US)

REACTOR OPERATION
Data Compilation
Licensed operating reactors. Status summary report, data as of February 28, 1986. Volume 10, No. 3, 11:29789 (R;US)
Human Factors
Investigation of the contributors to wrong unit or wrong train events, 11:29849 (R;US)
Transients
Model for LMFBR core transient analysis in real-time, 11:29779 (R;US)
Plant analyzer development for high-speed interactive simulation of BWR plant transients, 11:29828 (R;US)

REACTOR PROTECTION SYSTEMS
See also ECCS
Seismic Effects
Seismic and dynamic qualification of safety related electrical and mechanical equipment, 11:29850 (R;US)

REACTOR SAFETY
Evaluation
Scoping study of the potential effectiveness of an operational safety reliability program in addressing generic safety problems, 11:29860 (R;US)
Reliability
Comparison of three methods for calculating lower confidence limits on system reliability using binomial component data, 11:29876 (J;US)
Research Programs
French study and research program on water cooled reactor safety, 11:29757 (R;FR;In French)
Overview of Sandia's risk rebaselining/risk reduction analyses for NUREG-1150, 11:29862 (R;US)
Reactor safety research: visible demonstrations and credible computations, 11:29868 (J;US)

REACTOR SAFETY EXPERIMENTS
Loss of Coolant
Analysis of zircaloy rewetting experiments and their implication for reactor fuel, 11:29838 (R;FR)
REACTORS
See also LIQUID METAL COOLED REACTORS
MOBILE REACTORS
POWER REACTORS
PRODUCTION REACTORS
Environmental Effects
Division of Stress and Wildlife Ecology FY-1985 highlights, 11:30570 (RA;US)
READOUT SYSTEMS
Design
Design and performance of a CCD based readout for the DELPHI barrel electromagnetic calorimeter, 11:30467 (J;US)
Performance
Design and performance of a CCD based readout for the DELPHI barrel electromagnetic calorimeter, 11:30467 (J;US)
RECEPTORS
Distribution
Effect of preferential insertion of LDL receptors near coated pits, 11:30636 (J;US)
RECIPROCAL TRANSLOCATIONS

RESIDENCES
See HOUSES

RESIDENTIAL BUILDINGS
See also APARTMENT BUILDINGS
HOUSES
Air Infiltration
Description of ASHRAE's proposed data tightness standard, 11:30000 (R;US)
Attached Greenhouses
Thermal measurements in greenhouses attached to residential buildings. Climatic conditions - occupants - thermal comfort, 11:30013 (R;DE;In German)
Construction
Use of geoclimatic data for the determination of building characteristics in the north of the Venezuelan Republic, 11:29598 (RA;US)
Contamination
Some measurements of the equilibrium factor for radon daughters in houses, 11:30556 (RA;US)
Cooling Load
Integration of passive and active solar strategies in buildings, 11:29568 (RA;US)
Design
Traditional methods for energy conservation in dwelling units, 11:30006 (RA;US)
Energy Conservation
Energy conservation and its implication for architectural design and town planning in the hot-arid areas of Saudi Arabia and the US Gulf States, 11:29589 (RA;US)
Measured results of energy conservation retrofits in residential buildings, 11:30004 (R;US)
Traditional methods for energy conservation in dwelling units, 11:30006 (RA;US)
Ground Source Heat Pumps
Residential earth-coupled heat pump demonstration. Final report, 11:30014 (R;US)
Heating Load
Integration of passive and active solar strategies in buildings, 11:29568 (RA;US)
Orientation
Desirable orientation and proportion of courtyards for Riyadh region, 11:29580 (RA;US)
Influence of orientation on the internal thermal environment of residential buildings in Riyadh, 11:29578 (RA;US)
Passive Solar Cooling Systems
Desirable orientation and proportion of courtyards for Riyadh region, 11:29580 (RA;US)
Integration of passive and active solar strategies in buildings, 11:29568 (RA;US)
Passive cooling in Mexico, Mexico City, 11:29596 (RA;US)
Passive-hybrid cooling and load avoidance in very hot climates, 11:29584 (RA;US)
Use of geoclimatic data for the determination of building characteristics in the north of the Venezuelan Republic, 11:29598 (RA;US)
Passive Solar Heating Systems
Integration of passive and active solar strategies in buildings, 11:29568 (RA;US)
Washington State Solar Bank Program. A comprehensive 1984-85 program evaluation, 11:29605 (R;US)
Retrofitting
Measured results of energy conservation retrofits in residential buildings, 11:30004 (R;US)
Solar Architecture
Energy conservation and its implication for architectural design and town planning in the hot-arid areas of Saudi Arabia and the US Gulf States, 11:29589 (RA;US)
Solar Cooling Systems
Daily thermal storage for heating and cooling of buildings, 11:29590 (RA;US)
Influence of orientation on the internal thermal environment of residential buildings in Riyadh, 11:29578 (RA;US)
Solar energy policies and the role of human settlements planner, 11:29583 (RA;US)
Solar-powered, fuel-assisted Rankine cycle and cooling system: King Abdulaziz University cooling project, 11:29567 (RA;US)
Solarvilla - innovative concept of habitat using solar photovoltaic technology in energy self-sufficient housing for remote settlements throughout Saudi Arabia, 11:29514 (RA;US)
Solar Heating Systems
Daily thermal storage for heating and cooling of buildings, 11:29590 (RA;US)
Jordan's first solar-heated house, 11:29599 (RA;US)
Solar energy policies and the role of human settlements planner, 11:29583 (RA;US)
Solarvilla - innovative concept of habitat using solar photovoltaic technology in energy self-sufficient housing for remote settlements throughout Saudi Arabia, 11:29514 (RA;US)
Solar Water Heating
Solar water heating - recent trends, cost, and performance, 11:29592 (RA;US)
Standards
Description of ASHRAE's proposed data tightness standard, 11:30000 (R;US)
Thermal Comfort
Thermal measurements in greenhouses attached to residential buildings. Climatic conditions - occupants - thermal comfort, 11:30013 (R;DE;In German)
Weatherization
Report brief. Category: evaluation and modeling, 11:30015 (R;US)

RESIDUAL OILS
See PETROLEUM RESIDUES

RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES

RESINS
Deposition
Machine for applying a two component resin to a roadway surface, 11:30022 (P;US)
Radiolysis
Degradation of resins in EPICOR-II prefilters from Three Mile Island, 11:30154 (RA;US)
Water Removal
Dewatering of bean and powdered resin at Three Mile Island Unit 1, 11:29370 (RA;US)

RESISTANCE WELDING
Transformers
400 Hz welding transformer gun assembly evaluation. Final report, 11:30395 (R;US)

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONANCE SCATTERING
Molecular Models
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
Time Dependence
Detailed aspects of Raman scattering. Overtone and combination intensities and prescriptions for determining excited-state structure, 11:30815 (J;US)
RESPIRABLE DUSTS
See DUSTS
RESPIRATION
Biological Pathways
Reduced apparent photorespiration by the C_3-C_4 intermediate species, Moricandia arvensis and Panicum milioides, 11:30633 (J;US)
RESPIRATORS
Research Programs
Respiratory Protection Program. Programmatic description, 11:30737 (R;US)
RESPIRATORY EQUIPMENT
See RESPIRATORS
RETINOIC ACID
Photochemical Reactions
[Mesityl]bacteriorhodopsin. The properties of an analogue of the purple membrane containing [mesityl]retinal as the chromophore, 11:30637 (J;GB)
RETORTED SHALES
See SPENT SHALES
RETORTING
See also IN-SITU RETORTING
Gaseous Wastes
Shale oil aerosol removal using a Venturi scrubber environmental research on WRI's ten-ton oil shale retort, 11:29281 (BA;US)
RETORTS
Air Pollution Control
Processing in situ oil shale retort offgas with a Stretford plant at Geokinetics, 11:29280 (BA;US)
Computer-Aided Design
A new oil shale retort fluid beds exchanging solids but not gases, 11:29270 (BA;US)
Evaluation of blast designs for in situ oil shale retorting, 11:29262 (BA;US)
Design
Initial results of Green River Oil Shale Processing using the University of Utah's pilot scale bottom burning retort, 11:29269 (BA;US)
Results of mathematical modeling of oil shale retorting in an aboveground, external-combustion, moving-bed retort, 11:29268 (BA;US)
Heaters
Combustion heater for oil shale, 11:29265 (P;US)
Mathematical Models
Pressure loss in packed beds of low void fraction, 11:29267 (BA;US)
Results of mathematical modeling of oil shale retorting in an aboveground, external-combustion, moving-bed retort, 11:29268 (BA;US)
Performance Testing
Initial results of Green River Oil Shale Processing using the University of Utah's pilot scale bottom burning retort, 11:29269 (BA;US)
Permeability
A method for estimating permeability in oil shale retorts based on pressure and temperature measurements, 11:29266 (BA;US)
Uses
A new oil shale retort fluid beds exchanging solids but not gases, 11:29270 (BA;US)
REVERSE-FIELD PINCH
Plasma Confinement
Invited paper: confinement scaling, equilibrium, and stabilization studies in FRX-C, 11:31264 (BA;US)
Plasma Diagnostics
Thomson scattering measurements in the FRX-C device, 11:31263 (BA;US)
Plasma Simulation
Question of consistent boundary conditions when simulating reversed field pinch dynamics. Revision 1, 11:30986 (R;US)
Scaling Laws
Invited paper: confinement scaling, equilibrium, and stabilization studies in FRX-C, 11:31264 (BA;US)
Thomson Scattering
Thomson scattering measurements in the FRX-C device, 11:31263 (BA;US)
REVERTANTS
DNA Sequencing
Episomal DNA as a molecular probe of cytoplasmic male sterility in S Zea mays, 11:30650 (BA;US)
RF SYSTEMS
Cavity Resonators
Monochromatic radio frequency accelerating cavity, 11:30403 (P;US)
Materials Testing
Materials problems for highly irradiated ICRH Launchers in fusion reactors, 11:31195 (J;US)
Monochromatic Radiation
Monochromatic radio frequency accelerating cavity, 11:30403 (P;US)
RHENIUM
Electrochemistry
Manganese, technetium, and rhenium, 11:30221 (BA;US)
Thermodynamics
Manganese, technetium, and rhenium, 11:30221 (BA;US)
RHENIUM ALLOYS
Physical Radiation Effects
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys, 11:30083 (R;US)
RHODANATES
See THIOCYANATES
RHODANIDES
See THIOCYANATES
RHODIUM OXIDES
Sorptive Properties
FT-IR study of nitric oxide chemisorbed on Rh/Al_2O_3, 11:30214 (J;US)
RHODOPSIN
Photochemical Reactions
[Mesityl]bacteriorhodopsin. The properties of an analogue of the purple membrane containing [mesityl]retinal as the chromophore, 11:30637 (J;GB)
RIBULOSE DIPHOSPHATE CARBOXYLASE
Biochemical Reaction Kinetics
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis. Second annual report, 1 June 1985-31 May 1986, 11:29503 (R;US)
Enzyme Activity
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis. Second annual report, 1 June 1985-31 May 1986, 11:29503 (R;US)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RINGS (STORAGE)
See STORAGE RINGS
RISA
See ORGANIC IODINE COMPOUNDS
RISER CRACKING

RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Computerized Simulation
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)
Data Base Management
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)
Lectures
Science, technology, and society, 11:30735 (R;US)
Mathematical Models
Ecological risk analysis: prospects and problems, 11:30601 (RA;US)

Research Programs
Overview of Sandia's risk rebaselining/risk reduction analyses for NUREG-1150, 11:29862 (R;US)

RIVERS
See also COLUMBIA RIVER
Aeration
Costs of reservoir releases aeration, 11:29495 (R;US)

RIVETS
See FASTENERS

ROAD TRANSPORT
Computerized Simulation
U.S. Department of Energy transportation programs: computerized techniques, 11:29308 (BA;US)

ROBOTS
Use of robotics for radioactive waste shipping and receiving, 11:29307 (R;US)
Design
Kinematic modelling and graphic simulation of path planning for mobile vehicles, 11:30351 (R;US)
Research Programs
Kinematic modelling and graphic simulation of path planning for mobile vehicles, 11:30351 (R;US)

ROCK SALT
See SALT DEPOSITS

ROCKET ENGINES
Combustion Kinetics
Numerical simulation method for combustion in an oxyhydrogen rocket motor, 11:30281 (RA;JP)

ROCK-FLUID INTERACTIONS
Research Programs
Brine injection studies, 11:29912 (RA;US)
INEL injection research: physical model studies, 11:29911 (RA;US)

ROCKS
See also IGNEOUS ROCKS
METAMORPHIC ROCKS
SEDIMENTARY ROCKS
Fracture Mechanics
Analysis of triaxial testing using a fracture damage model, 11:30386 (R;US)
Mechanical Tests
Analysis of triaxial testing using a fracture damage model, 11:30386 (R;US)

ROCKY FLATS PLANT
Radioactive Waste Processing
Waste Systems progress report, March 1984-February 1985, 11:29413 (R;US)

ROD BUNDLES
Fluid Flow
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume II. User's manual, 11:29801 (R;US)
Heat Transfer
COMMIX-1B: a three-dimensional transient single-phase computer program for thermal hydraulic analysis of single and multicomponent systems. Volume II. User's manual, 11:29801 (R;US)

ROD DROP ACCIDENTS
Computerized Simulation
Effects of rod worth and drop speed on the BWR off-center rod drop accident, 11:29825 (R;US)

RODS (FUEL)
See FUEL RODS

ROTATION
Measuring Instruments
Accurate measurement of small rotations by modulating polarization. Final report, 11:30500 (R;US)

ROTORS
See also DARRIEUS ROTORS
TIPVANE ROTORS
Aerodynamics
Aerodynamic performance of a new LM 17.2 m rotor, 11:29660 (RA;DE)
Performance
Aerodynamic performance of a new LM 17.2 m rotor, 11:29660 (RA;DE)
Velocity
Resonance compensation of wind power plants with variable rotor speed, 11:29668 (R;SE;In Swedish)

RUBIDIUM
Catalytic Effects
Computed tomography of coals. Quarterly technical progress report No. 8, July 1-September 30, 1984, 11:29156 (R;US)

RUBIDIUM 82
Dosimetry
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1985, 11:30663 (R;US)

RUBIDIUM FLUORIDES
Chemical Preparation
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)
Infrared Spectra
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)
Vibrational States
Complexes of cesium and rubidium fluorides with bromine trifluoride, 11:30226 (J;CH)

RUNOFF
Liquid Flow
Inflow to a crack in playa deposits of Yucca Lake, Nevada Test Site, Nye County, Nevada, 11:30745 (R;US)

RURAL AREAS
Land Use
Land use model with a constant-utility spatially variant wage, 11:30592 (J;US)

RUSSELLVILLE-1 ARKANSAS REACTOR
See ARKANSAS-1 REACTOR

RUTHENIUM
Catalytic Effects
Kinetics of CO oxidation over Ru(0001), 11:30201 (J;US)
Radiolysis
Radiation-induced reactions of polymer radicals with ruthenium tris(bipyridyl)-OH adducts in aqueous solutions, 11:30252 (J;US)

RUTHENIUM COMPLEXES
Cations
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Chemical Reaction Kinetics
Kinetics and mechanisms of electron transfer between blue copper proteins and electronically excited chromium and ruthenium polypyridine complexes, 11:30292 (J;US)
Electron Transfer
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Excited States
Pyridinium quenchers of $Ru(bpy)_3^{2+}$ charge effects of the yield of electron transfer, 11:30291 (J;US)
Luminescence
Pyridinium quenchers of $Ru(bpy)_3^{2+}$ charge effects of the yield of electron transfer, 11:30291 (J;US)
Photolysis
Laser flash photolytic determination of triplet yields via singlet oxygen generation, 11:30297 (J;CH)
Radicals
Bonded vs. nonbonded electron transfers in molten salts: characterization and rates of formation of the radical cations and dications of phenoxazine and phenothiazine and behavior of the M(2,2'-bipyridine)$_3$/sup 2+/3+/ (M = Fe, Ru, Os) complexes in $SbCl_3$-rich media, 11:30244 (J;US)
Structural Chemical Analysis
Anorganic chemistry, 11:30191 (RA;ZA;In Afrikaans)
Structure chemistry, 11:30192 (RA;ZA;In Afrikaans)

S

S CODES
Design
Design review of the SYVAC Executive, November 1984-February 1985, 11:29440 (R;GB)
SAFETY (REACTOR)
See REACTOR SAFETY
SAFETY STANDARDS
Indexes
Cross-index to DOE-prescribed occupational safety codes and standards, 11:30736 (R;US)
SALAMANDERS
Populations
Addendum to the distribution of two herptiles in Idaho, 11:30571 (J;US)
SALINE ZONE
See OIL SHALES
PICEANCE CREEK BASIN
SALT CAVERNS
Creep
Comparison between predicted and measured south drift closures at the WIPP using a transient creep model for salt, 11:30752 (R;US)
Three dimensional modeling of the wedge pillar portion of the WIPP Geomechanical Evaluation (Room G) in situ experiment, 11:30755 (R;US)
Deformation
Early results from the thermal/structural in situ test series at the WIPP, 11:30751 (R;US)
SALT DEPOSITS
Dissolution
Saline dissolution collapse in the Piceance Creek Basin, 11:29259 (BA;US)
Geologic Structures
Evaluation of the structure and stratigraphy over Richton Dome, Mississippi, 11:30738 (R;US)
Hydraulic Conductivity
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
Hydraulic Fracturing
Experience with hydraulic fracturing tests for stress measurements in the WIPP, 11:30753 (R;US)
Hydrology
Saline dissolution collapse in the Piceance Creek Basin, 11:29259 (BA;US)
Permeability
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
Rock Mechanics
Three dimensional modeling of the wedge pillar portion of the WIPP Geomechanical Evaluation (Room G) in situ experiment, 11:30755 (R;US)
Rock-Fluid Interactions
Saline dissolution collapse in the Piceance Creek Basin, 11:29259 (BA;US)
Stratigraphy
Evaluation of the structure and stratigraphy over Richton Dome, Mississippi, 11:30738 (R;US)
Stresses
Experience with hydraulic fracturing tests for stress measurements in the WIPP, 11:30753 (R;US)
SAMARIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Isotope Ratio
Removal of isobaric interferences by resonance ionization mass spectrometry, 11:30188 (J;US)
SAMARIUM SULFIDES
Physical Radiation Effects
Pressure and irradiation effects on transport properties of samarium compounds with instable valence, 11:30155 (R;FR;In French)
Pressure Dependence
Pressure and irradiation effects on transport properties of samarium compounds with instable valence, 11:30155 (R;FR;In French)
Valence
Pressure and irradiation effects on transport properties of samarium compounds with instable valence, 11:30155 (R;FR;In French)
SANDIA LABORATORIES
Research Programs
Magma energy and geothermal permeability enhancement programs, 11:29641 (RA;US)
Sandia geothermal technology program: interactions with other DOE research and CSDP, 11:29910 (RA;US)
SANDSTONES
Bulk Density
In-situ dynamic moduli of Mesaverde rocks compared to static and dynamic laboratory moduli, 11:29250 (R;US)
Elasticity
In-situ dynamic moduli of Mesaverde rocks compared to static and dynamic laboratory moduli, 11:29250 (R;US)
Hydraulic Fracturing
Quasi-static and dynamic arbitrary fracture propagation in jointed rock, 11:29252 (R;US)
Shear Properties
In-situ dynamic moduli of Mesaverde rocks compared to static and dynamic laboratory moduli, 11:29250 (R;US)
Sonic Logging
In-situ dynamic moduli of Mesaverde rocks compared to static and dynamic laboratory moduli, 11:29250 (R;US)
Wave Propagation
In-situ dynamic moduli of Mesaverde rocks compared to static and dynamic laboratory moduli, 11:29250 (R;US)
SAUDI ARABIA
Climates
Bioclimatic indicators for determining passive and low energy hybrid systems - case study, Saudi Arabia, 11:29585 (RA;US)
Energy conservation and its implication for architectural design and town planning in the hot-arid areas of Saudi Arabia and the US Gulf States, 11:29589 (RA;US)
Insolation
Solar radiation on different oriented vertical surfaces: Riyadh case study, 11:29498 (RA;US)
Residential Buildings
Solarvilla - innovative concept of habitat using solar photovoltaic technology in energy self-sufficient housing for remote settlements throughout Saudi Arabia, 11:29514 (RA;US)
Weather
Climate of Riyadh and the passive response in traditional buildings, 11:30010 (RA;US)
SAVANNAH RIVER PLANT
Environmental Effects
Division of Wetlands Ecology FY-1985 highlights, 11:30569 (RA;US)
Research Programs
Division of Biogeochemical Ecology FY-1985 highlights, 11:30760 (RA;US)
Division of Wetlands Ecology FY-1985 highlights, 11:30569 (RA;US)
Division of Stress and Wildlife Ecology FY-1985 highlights, 11:30570 (RA;US)
SCANDIUM 46
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
SCANDIUM SULFIDES
Electronic Structure
Calculated electron density distributions in ScS and Sc_3S_4, 11:30205 (J;US)
SCANNING ELECTRON MICROSCOPY
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
SCANNING LIGHT MICROSCOPY
Reliability
Reliability of scanning laser acoustic microscopy for detecting internal voids in structural ceramics, 11:30122 (R;US)

SCATTERING
See also QUASI-ELASTIC SCATTERING
Diffraction Models
Diffractive hard scattering and the SSC, 11:30848 (R;US)
Jet Model
Diffractive hard scattering and the SSC, 11:30848 (R;US)

SOLID SCINTILLATION DETECTORS
Materials Testing
A cerium glass fiber-optic active target for high energy physics experiments, 11:30474 (J;US)
Properties of new scintillation glasses and scintillating fibers, 11:30473 (J;US)
Optical Fibers
A cerium glass fiber-optic active target for high energy physics experiments, 11:30474 (J;US)
Properties of new scintillation glasses and scintillating fibers, 11:30473 (J;US)
Optical Properties
Properties of new scintillation glasses and scintillating fibers, 11:30473 (J;US)
Photomultipliers
Tetrode photomultiplier base for high magnetic field environments, 11:30458 (J;US)
Pulse Generators
Fast timing light pulser for scintillation detectors, 11:30489 (J;NL)
Timing Circuits
Fast timing light pulser for scintillation detectors, 11:30489 (J;NL)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCINTILLATOR-PHOTODIODE DETECTORS
Design
A scintillator-photodiode position detector, 11:30460 (J;US)
Performance
Highly segmented NaI(Tl) detector with vacuum photodiode readout for measuring electromagnetic showers at the CERN ISR, 11:30485 (J;NL)
Photodiodes
A scintillator-photodiode position detector, 11:30460 (J;US)
Readout Systems
A scintillator-photodiode position detector, 11:30460 (J;US)
SCOTLAND
See UNITED KINGDOM
SCREWS
See FASTENERS
SCRUBBERS
Design
Shale oil aerosol removal using a Venturi scrubber environmental research on WRI's ten-ton oil shale retort, 11:29281 (BA;US)
SEA BED
Sediments
Geotechnical properties of fine-grained turbidite sequences: observations from the Nares Abyssal Plain, 11:30750 (R;US)
SEA DISPOSAL
See MARINE DISPOSAL
SEALING MATERIALS
Materials Testing
Alternative sealing materials for radioactive waste longterm storage or disposal, 11:30153 (RA;US)
Microwave Heating
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Thermal Diffusion
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
SEALS
Fabrication
Ceramic-glass-metal seal by microwave heating, 11:30128 (P;US)
Ceramic-glass-ceramic seal by microwave heating, 11:30129 (P;US)
Shape memory alloy seals for geothermal applications, 11:29637 (R;US)
SEASONAL THERMAL ENERGY STORAGE
Research Programs
STES newsletter: a quarterly review of seasonal thermal energy storage, 11:29988 (J;US)
Simulation
STES newsletter: a quarterly review of seasonal thermal energy storage, 11:29988 (J;US)
SEAWATER
Corrosive Effects
Investigations of the vibrational corrosion of structural steels in seawater, 11:30095 (R;DE;In German)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SEDIMENTARY ROCKS
See also PHOSPHATE ROCKS
SANDSTONES
SHALES
Physical Properties
Studies of froosh, the thermoregulating indigenous construction material of the Saudi Arabian Gulf Coast, 11:29579 (RA;US)
Stresses
Elastic and viscoelastic model of the stress history of sedimentary rocks, 11:30754 (R;US)
SEDIMENTS
Physical Properties
Geotechnical properties of fine-grained turbidite sequences: observations from the Nares Abyssal Plain, 11:30750 (R;US)
SEEDLINGS
Biological Adaptation
Effects of quantum flux density of photosynthesis and chloroplast ultrastructure in tissue-cultured plantlets and seedlings of Liquidambar styraciflua L. towards improved acclimatization and field survival, 11:30679 (J;US)
Photosensitivity
Blue and green light-induced phototropism in Arabidopsis thaliana and Lactuca sativa L. seedlings, 11:30683 (J;US)
Plant Growth
Ethylene and the growth of rice seedlings, 11:30676 (J;US)
SEISMIC DETECTION
Data Processing
Discrimination of NTS explosions and western United States earthquakes: data processing, 11:30518 (R;US)
SELENIUM
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
SELENIUM COMPOUNDS
Detection
Detection of organomercury, selenium and arsenic compounds by a capillary column gas chromatography-microwave plasma detector system, 11:30224 (J;GB)
SELF-POWERED NEUTRON DETECTORS
Performance Testing
In-core measurements with platinum self powered detectors in a French PWR, 11:29756 (R;FR)
SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY

SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Data Acquisition Systems
MARK II end cap calorimeter electronics, 11:30470 (J;US)
Performance report for Stanford/SLAC Multi-Channel Sample-and-Hold Device, 11:30457 (J;US)
Energy Resolution
Design and performance of a CCD based readout for the DELPHI barrel electromagnetic calorimeter, 11:30467 (J;US)
Multi-Channel Analyzers
Performance report for Stanford/SLAC Multi-Channel Sample-and-Hold Device, 11:30457 (J;US)
NaI Detectors
Highly segmented NaI(Tl) detector with vacuum photodiode readout for measuring electromagnetic showers at the CERN ISR, 11:30485 (J;NL)
Performance
Performance of the SLD Warm Iron Calorimeter pre-prototype, 11:30477 (J;US)
Performance Testing
SLD liquid argon calorimeter prototype test results, 11:30455 (J;US)
Readout Systems
Design and performance of a CCD based readout for the DELPHI barrel electromagnetic calorimeter, 11:30467 (J;US)
Scintillator-Photodiode Detectors
A scintillator-photodiode position detector, 11:30460 (J;US)
Highly segmented NaI(Tl) detector with vacuum photodiode readout for measuring electromagnetic showers at the CERN ISR, 11:30485 (J;NL)

SHREDDERS
Operation
Operating experience of a mobile waste shredding system, 11:29347 (RA;US)

SI SEMICONDUCTOR DETECTORS
See also LI-DRIFTED SI DETECTORS
Construction
A silicon vertex detector for CDF, 11:30446 (J;US)
Design
A silicon vertex detector for CDF, 11:30446 (J;US)
Detection of charged particles in amorphous silicon layers, 11:30425 (R;US)
Fabrication
Silicon position sensitive detectors for the HELIOS (NA34) experiment, 11:30423 (R;US)
Performance
Detection of charged particles in amorphous silicon layers, 11:30425 (R;US)
Performance Testing
Detection of charged particles in amorphous silicon layers, 11:30428 (J;US)
Testing
Silicon position sensitive detectors for the HELIOS (NA34) experiment, 11:30423 (R;US)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SIEGBAHN SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SILENE REACTOR
Research Programs
Research program and uses of the solution fueled reactor SILENE, 11:29816 (R;FR;In French)
Uses
Research program and uses of the solution fueled reactor SILENE, 11:29816 (R;FR;In French)

SILICA
Mineralogy
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)
Opacity
Transient absorption of light induced by radiation, 11:30160 (R;US)
Physical Radiation Effects
Transient absorption of light induced by radiation, 11:30160 (R;US)
Precipitation
Geothermal research at the Puna Facility. Technical report, 11:29642 (R;US)
Quantitative Chemical Analysis
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Surface Area
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)

SILICA GEL
Chemical Reactions
Guest molecules in coal. Sixth quarterly report, January 1, 1986-March 31, 1986 (Semicarbazide bonded silica gel), 11:29182 (R;US)
Sorptive Properties
Silica gel sorption properties under adiabatic conditions, 11:29604 (R;US)

SILICEOUS ROCK
See SANDSTONES

SILICIC ACID ESTERS
See ORGANIC SILICON COMPOUNDS

SILICON
Annealing
Development of laser-processed high-efficiency n+pp+ silicon solar cells, 11:29557 (BA;US)
Crystal Growth
Flat-Plate Solar Array Project (FSA) progress and plans, 11:29558 (BA;US)
Deposition
Effect of argon and hydrogen on deposition of silicon from tetrachlorosilane in cold plasmas, 11:30123 (R;US)
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Grain Boundaries
Polycrystalline silicon: Impurity incorporation and passivation, 11:29556 (BA;US)
Ion Implantation
Development of laser-processed high-efficiency n+pp+ silicon solar cells, 11:29557 (BA;US)

Passivation
Polycrystalline silicon: Impurity incorporation and passivation, 11:29556 (BA;US)

SILICON ALLOYS
Formation Free Enthalpy
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Lattice Parameters
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Order Parameters
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)
Physical Radiation Effects
Radiation-induced segregation in light-ion bombarded Ni-8% Si, 11:30088 (R;US)
Stability
Stability of ordered bulk and epitaxial semiconductor alloys, 11:30169 (J;US)

SILICON CARBIDES
Chemical Vapor Deposition
Simultaneous chemical vapor deposition of SiC-dispersed phase composites, 11:30131 (BA;US)
Fabrication
Chemical vapor infiltration of fiber-reinforced ceramic composites, 11:30143 (R;US)
Development of a continuous spinning process for producing silicon carbide - silicon nitride precursor fibers. Final report, 11:30121 (R;US)
Fracture Properties
Silicon carbide whisker reinforced ceramic composites and method for making same, 11:30126 (P;US)
Simultaneous chemical vapor deposition of SiC-dispersed phase composites, 11:30131 (BA;US)
Hot Pressing
Silicon carbide whisker reinforced ceramic composites and method for making same, 11:30126 (P;US)
Scanning Light Microscopy
Reliability of scanning laser acoustic microscopy for detecting internal voids in structural ceramics, 11:30122 (R;US)
Voids
Reliability of scanning laser acoustic microscopy for detecting internal voids in structural ceramics, 11:30122 (R;US)

SILICON CHLORIDES
Decomposition
Effect of argon and hydrogen on deposition of silicon from tetrachlorosilane in cold plasmas, 11:30123 (R;US)

SILICON COMPOUNDS
See also SILANES, SILOXANES and SILICONES.
See also SILICON CARBIDES
SILICON CHLORIDES
SILICON FLUORIDES
SILICON NITRIDES
SILICON OXIDES
Crystal Structure
Nuclear magnetic resonance studies of amorphous silicon hydrides: proton spin dynamics, 11:30223 (D;US)

SILICON FLUORIDES
Chemical Reactions
Infrared multiphoton absorption and reaction of 2-chloro-1,1,1-trifluoroethane, 11:30264 (J;US)

SILICON NITRIDES
Fabrication
Development of a continuous spinning process for producing silicon carbide - silicon nitride precursor fibers. Final report, 11:30121 (R;US)
Scanning Light Microscopy
Reliability of scanning laser acoustic microscopy for detecting internal voids in structural ceramics, 11:30122 (R;US)
Voids
Reliability of scanning laser acoustic microscopy for detecting internal voids in structural ceramics, 11:30122 (R;US)

SILICON OXIDES
See also SILICA
Breeding Ratio
Thermochemical comparison of the effectiveness of protium purging of fusion breeders, 11:31142 (J;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Annealing
Burst annealing of electron damage in silicon solar cells, 11:29529 (RA;US)
Computerized Simulation
High-efficiency silicon solar-cell design and practical barriers, 11:29504 (R;US)
Constraints
High-efficiency silicon solar-cell design and practical barriers, 11:29504 (R;US)
Design
High-efficiency silicon solar-cell design and practical barriers, 11:29504 (R;US)
Efficiency
GaAsP on GaP top solar cells, 11:29523 (RA;US)
Influence of design variables on radiation hardness of silicon MINP solar cells, 11:29531 (RA;US)
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)
Electric Potential
Further research on high open circuit voltage in silicon solar cells, 11:29518 (RA;US)
Fabrication
Development of laser-processed high-efficiency n+pp+ silicon solar cells, 11:29557 (BA;US)
Influence of design variables on radiation hardness of silicon MINP solar cells, 11:29531 (RA;US)
Photovoltaic concentrator research status, 11:29611 (BA;US)
Status of photovoltaics R & D at SERI, 11:29548 (BA;US)
Ion Implantation
Further research on high open circuit voltage in silicon solar cells, 11:29518 (RA;US)
Performance
Two years of on-orbit gallium arsenide performance from the LIPS solar cell panel experiment, 11:29537 (RA;US)
Performance Testing
Mechanically-stacked multijunction solar cells, 11:29555 (BA;US)
Physical Radiation Effects
Burst annealing of electron damage in silicon solar cells, 11:29529 (RA;US)
I-V-T analysis of radiation damage in high efficiency Si solar cells, 11:29530 (RA;US)
Radiation damage in high-resistivity silicon solar cells, 11:29532 (RA;US)
Space Environment Workshop, 11:29544 (RA;US)
Radiation Hardening
Influence of design variables on radiation hardness of silicon MINP solar cells, 11:29531 (RA;US)
Reflectivity
Optical effects of thin film adhesives in multijunction solar cells, 11:29549 (BA;US)
Research Programs
Cell research and technology workshop, 11:29543 (RA;US)
Overview of SERI's high efficiency solar cell research, 11:29517 (RA;US)

SILOXANES
Additives
Method for controlling the viscosity of siloxane oils, 11:29249 (P;US)
Viscosity
Method for controlling the viscosity of siloxane oils, 11:29249 (P;US)

SILVER
Auger Electron Spectroscopy
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Bonding
Method of bonding silver to glass and mirrors produced according to this method, 11:29610 (P;US)
Catalytic Effects
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)

Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Electron Diffraction
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Energy Beam Deposition
Method of bonding silver to glass and mirrors produced according to this method, 11:29610 (P;US)
Photoelectron Spectroscopy
Cs-promoted Ag(111): model studies of selective ethylene oxidation catalysts, 11:30213 (J;US)
Surface Properties
Surface-enhanced resonance Raman study of the photoreduction of methylviologen on a p-InP semiconductor electrode, 11:30285 (J;US)
Surfaces
Radiative decay of surface plasmons on nonspherical silver particles, 11:30115 (BA;US)
Vacuum Coating
Method of bonding silver to glass and mirrors produced according to this method, 11:29610 (P;US)

SILVER 110
Diffusion
Silver-tracer diffusion in Cu_2O, 11:30230 (J;GB)

SILVER ISOTOPES
See also SILVER 110
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Neon 20 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Oxygen 16 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)

SIMS
See MASS SPECTROSCOPY

SIN CYCLOTRON
Includes the 590 MeV ring cyclotron and the two injector cyclotrons.
Materials Testing
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys (Candidate window materials for SIN beam stop), 11:30099 (R;US)
Windows
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys (Candidate window materials for SIN beam stop), 11:30099 (R;US)

SINGAPORE
Building Codes
Analysis of energy conservation standards for Singapore office buildings, 11:30020 (J;GB)
Office Buildings
Analysis of energy conservation standards for Singapore office buildings, 11:29978 (RA;US)

SINGLE CRYSTALS
See MONOCRYSTALS

SISTER CHROMATID EXCHANGES
Biological Indicators
Use of cytogenetic endpoints in human lymphocytes as indicators of exposure to genotoxicants, 11:30721 (BA;US)

SKELETON
Congenital Malformations
Axial skeleton malformations induced by 5 fluoro-2'-desoxycytidine (FCdR) and X-rays in mice of the breeding strains C57Bl/6JHanFfm, C57Bl/10JFfm, and in hamsters of the GHFfm breeding strain. A comparative evaluation considering gestation stages and dose-response-relationships, 11:30692 (R;DE;In German)

SKYRMIONS
See SOLITONS

SLABS
Thicker than PLATES, primarily for use in shielding studies.
Design
Global methods for reinforced concrete slabs, 11:30151 (R;FR)

SLATIS-SIEGBAHN SPECTROMETERS
See MAGNETIC LENS SPECTROMETERS

SLC
See STANFORD LINEAR COLLIDER

SLC DETECTORS
Cherenkov Counters
Development of the Cerenkov Ring Imaging Detector for the SLD, 11:30449 (J;US)
Data Acquisition Systems
Overview of the data acquisition electronics system design for the SLAC linear collider detector (SLD), 11:30443 (J;US)
Design
Overview of the SLD, 11:30442 (J;US)
Drift Chambers
Analysis of digitized waveforms in a prototype of the SLD central drift chamber, 11:30452 (J;US)
Performance of the SLD Central Drift Chamber prototype, 11:30476 (J;US)
Waveform sampler CAMAC module, 11:30444 (J;US)
Fastbus System
The FASTBUS Segment Extension as a crate coupling concept, 11:30463 (J;US)
Shower Counters
Performance of the SLD Warm Iron Calorimeter pre-prototype, 11:30477 (J;US)
SLD liquid argon calorimeter prototype test results, 11:30455 (J;US)

SLD
See SLC DETECTORS

SLIP FLOW
Corrections
Slip correction measurements for aerosol particles of doublet and triangular triplet aggregates of spheres, 11:30821 (RA;US)

SLM
See SCANNING LIGHT MICROSCOPY

SLOT OVENS
See COKE OVENS

SLOW NEUTRONS
T Invariance
Tests of T-invariance with slow neutrons, 11:30947 (R;US)

SLUDGES
Chemical Composition
Analytical characterization of West Valley high-level waste sludge, 11:29396 (RA;US)
Fluidized-Bed Combustion
Possibilities of using sludge for energy purposes, 11:30027 (R;FI;In Finnish)
Materials Handling
Status of the waste removal system for the West Valley Demonstration Project, 11:29397 (RA;US)
Waste Processing
Possibilities of using sludge for energy purposes, 11:30027 (R;FI;In Finnish)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Slurry growth: the characterization of a unique phenomenon at the Hanford Site, 11:29394 (RA;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SMALL BUSINESSES
Contracts
General design of a technical assistance program to help DOE/prime contractor buyers in doing business with small disadvantaged businesses, 11:31272 (R;US)

SMECTITE
Hydrothermal Alteration
Effect of pH on the stability of smectite, 11:30148 (R;CA)

SMOKES
Environmental Impacts
Progress in developing the smoke source term for "nuclear winter" studies: major uncertainties, 11:30545 (R;US)

SNAKES
Populations
Addendum to the distribution of two herptiles in Idaho, 11:30571 (J;US)
SNG
See HIGH BTU GAS
SODA ASH
See SODIUM CARBONATES
SODIUM
Adsorption
Quantitative mineralogy and preliminary pore-water chemistry of candidate buffer and backfill materials for a nuclear fuel waste disposal vault, 11:29313 (R;CA)
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Separation Processes
Eluent and ligand effects in cation chromatography, 11:30185 (D;US)
SODIUM 22
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
SODIUM CARBONATES
Production
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
SODIUM CHLORIDES
Biological Effects
Proteins associated with adaptation of cultured tobacco cells to NaCl, 11:30644 (J;US)
Convection
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
Diffusion
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
Thermodynamic Properties
Large-scale fluctuations and the critical behavior of dilute NaCl in H_2O, 11:30197 (J;US)
SODIUM CITRATES
See SODIUM COMPOUNDS
SODIUM COMPLEXES
Comparative Evaluations
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
SODIUM COMPOUNDS
See also SODIUM CARBONATES
SODIUM CHLORIDES
SODIUM FLUORIDES
SODIUM OXIDES
SODIUM SILICATES
SODIUM SULFATES
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
SODIUM FLUORIDES
Neon 20 Reactions
Coplanarity of two-proton emissions in 400 MeV/nucleon Ne + NaF, Pb reactions, 11:30906 (R;JP)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM LAURYL SULFATES

SODIUM OXIDES
Aerosols
Local transport of vertically- and horizontally-emitted sodium oxide aerosols, 11:29778 (R;US)
SODIUM SILICATES
Compression Strength
Alternative sealing materials for radioactive waste longterm storage or disposal, 11:30153 (RA;US)
Microstructure
Alternative sealing materials for radioactive waste longterm storage or disposal, 11:30153 (RA;US)
Stability
Alternative sealing materials for radioactive waste longterm storage or disposal, 11:30153 (RA;US)
SODIUM SULFATES
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
SODIUM-SULFUR BATTERIES
Electrodes
Post-test analyses of Na/S cells and aqueous batteries, 11:29898 (RA;US)
Performance Testing
Accelerated life testing of sodium-sulfur cells, 11:30054 (RA;US)
Advanced secondary battery development and testing: a Canadian perspective, 11:29880 (RA;US)
In-test and post-test analyses of sodium-sulfur cells, 11:29899 (RA;US)
Overview of battery testing in the UK, 11:29882 (RA;US)
Overview of rechargeable battery testing in Japan, 11:29883 (RA;US)
Start-up test for NaS-traction-batteries, 11:29889 (RA;US)
Use of computer network to achieve testing flexibility, 11:29896 (RA;US)
Solid Electrolytes
Solid electrolyte for high energy density batteries, 11:29902 (R;US)
Temperature Control
Design of the thermal management systems for NaS-traction-batteries by using battery models, 11:30056 (RA;US)
SOILS
Compacting
Subsidence and settlement and their effect on shallow land burial, 11:29326 (RA;US)
Contamination
Use of the food-chain model FOOD III and the soil model SCEMR to assess irrigation as a biosphere pathway, 11:30579 (R;CA)
Deformation
Subsidence and settlement and their effect on shallow land burial, 11:29326 (RA;US)
Natural Radioactivity
Aerial radiological survey of the Feed Materials Production Center and surrounding area, Fernald, Ohio. Date of survey: April 1985, 11:30583 (R;US)
Radionuclide Migration
Application of organic tracers in characterizing the Greater Confinement Disposal Test at the Nevada Test Site, 11:29340 (RA;US)
Behavior of ^{137}Cs-tagged particles in a fescue meadow, 11:30701 (BA;XA)
Iodine in terrestrial wildlife on the US Department of Energy's Handford site in south-central Washington, 11:30585 (J;NL)
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Response Modifying Factors
Factors influencing pool fires on porous ground, 11:30544 (R;GB)
Sampling
Aerial radiological survey of the Feed Materials Production Center and surrounding area, Fernald, Ohio. Date of survey: April 1985, 11:30583 (R;US)
SOLAR BATTERIES

Performance
Jordan's first solar-heated house, 11:29599 (RA;US)
Performance and cost experience of active solar-heated buildings, 11:29571 (RA;US)
Planning
Solar energy policies and the role of human settlements planner, 11:29583 (RA;US)
Program Management
Solar Heat Technologies international program coordination support. Final report, 11:29565 (R;US)
Public Policy
Solar energy policies and the role of human settlements planner, 11:29583 (RA;US)
Research Programs
Overview of US solar building research, 11:29575 (RA;US)
Seasonal Thermal Energy Storage
Daily thermal storage for heating and cooling of buildings, 11:29590 (RA;US)
Technology Assessment
Solarvilla - innovative concept of habitat using solar photovoltaic technology in energy self-sufficient housing for remote settlements throughout Saudi Arabia, 11:29514 (RA;US)

SOLAR PROCESS HEAT
Cost Estimation
Value of solar thermal industrial process heat, 11:29601 (R;US)

SOLAR RADIATION
Monitoring
Portable monitor for solar radiation that accumulates irradiance histograms for 32 leaf-mounted sensors, 11:30505 (J;NL)

SOLAR REFLECTORS
Fabrication
Method of bonding silver to glass and mirrors produced according to this method, 11:29610 (P;US)

SOLAR SPACE HEATING
Appraisal
Active solar heating in the UK. Department of Energy R and D programme 1977-1984, 11:29566 (R;GB)

SOLAR WATER HEATERS
Cost
Solar water heating - recent trends, cost, and performance, 11:29592 (RA;US)
Fluid Flow
Flow in the circulation loop of a thermosyphon solar water heating system, 11:29569 (RA;US)
Performance
Solar water heating - recent trends, cost, and performance, 11:29592 (RA;US)
Research Programs
Overview of US solar building research, 11:29575 (RA;US)

SOLAR WATER HEATING
Use for solar domestic water heating; not for process hot water.
Appraisal
Active solar heating in the UK. Department of Energy R and D programme 1977-1984, 11:29566 (R;GB)

SOLAR X-RAY BURSTS
Emission Spectra
Excitation of the iron Kα feature in solar flares, 11:30788 (R;GB)

SOLID ELECTROLYTES
Corrosion
Solid electrolyte for high energy density batteries, 11:29902 (R;US)

SOLID SCINTILLATION DETECTORS
See also BGO DETECTORS
NAI DETECTORS
PLASTIC SCINTILLATION DETECTORS
Data Acquisition Systems
A real time data compactor (sparsifier) and 8 megabyte high speed FIFO for HEP, 11:30469 (J;US)
Physical Radiation Effects
Radiation damage test of barium fluoride scintillator, 11:30495 (J;NL)

SOLID WASTES
See also WOOD WASTES
Minimization
Solid waste minimization at Duke Power Company, 11:29366 (RA;US)

SOLIDS
Charge Exchange
Charge and spin density waves in charge-transfer solids, 11:30269 (J;GB)
Defects
Defects in solids studied by optical techniques, 11:30158 (RA;ZA)
Studies of defects with the Moessbauer effect, 11:30157 (RA;ZA)
Electronic Structure
Charge and spin density waves in charge-transfer solids, 11:30269 (J;GB)

SOLIDS FLOW
Reviews
Fundamentals of bulk solids flow (369 references), 11:29211 (R;GB)
SOLID-STATE PLASMA
ICR Heating
Selective heating and separation of isotopes in a metallic plasma, 11:31012 (BA;US)
SOLITONS
Particle Models
Skyrmions, 11:30956 (R;FR)
SOLVENT EXTRACTION
Computerized Simulation
Consolidated Fuel Reprocessing Program. Progress report, October 1-December 31, 1985, 11:29296 (R;US)
SOLVENT-REFINED COAL
Gas Chromatography
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Leaching
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Liquid Column Chromatography
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Quantitative Chemical Analysis
Chromatographic chemical characterization of solvent refined coal I and II, 11:30725 (J;DE)
Toxicity
Chromatographic chemical characterization of solvent refined coal I and II, 11:30725 (J;DE)
SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SONIC LOGGING
Corrections
Computer method to detect and correct cycle skipping on sonic logs (NNWSI project), 11:30746 (R;US)
SOOT
Molecular Structure
Reactivity of large carbon clusters: spheroidal carbon shells and their possible relevance to the formation and morphology of soot, 11:30248 (J;US)
SORA REACTOR
Power Supplies
Probabilistic analysis of the events: loss of electric power supply of the secondary coolant circuit pump related to the busbar AL1 AL2 and loss of power supply of the busbar ML1 ML2 of the primary coolant circuit of the SORA reactor, 11:29819 (R;FR;In Italian)
SOUTH AFRICA
Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
SOUTH AMERICA
See also BRAZIL
COLOMBIA
URUGUAY
VENEZUELA
Mineral Cycling
Organic carbon-14 in the Amazon River system, 11:30605 (J;US)
SOUTH DAKOTA
Granites
Thermally induced chemical migration: a natural analog approach. [Technical progress report], 11:30759 (R;US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOUTH TEXAS PROJECT-1 REACTOR
Bay City, Texas, USA
Reactor Licensing
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
Reactor Operation
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
Reactor Safety
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
SOUTH TEXAS PROJECT-2 REACTOR
Bay City, Texas, USA
Reactor Licensing
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
Reactor Operation
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
Reactor Safety
Safety Evaluation Report related to the operation of South Texas Project, Units 1 and 2 (Docket Nos. 50-498 and 50-499) , 11:29847 (R;US)
SOUTHWEST REGION
See FEDERAL REGION VI
SOVIET UNION
See USSR
SPACE FLIGHT
Mission Analysis
Interplanetary exploration-A challenge for photovoltaics, 11:29456 (RA;US)
SPACE HEATING
See also SOLAR SPACE HEATING
Fuels
Analyzing the applicability of black coal in public buildings of the Ruhr District, 11:30012 (R;DE;In German)
SPACE LATTICES
See CRYSTAL LATTICES
SPACE POWER REACTORS
See also SPACE PROPULSION REACTORS
Coated Fuel Particles
High flux research reactors based on particulate fuel, 11:29784 (R;US)
High power density reactors based on direct cooled particle beds, 11:29783 (R;US)
Reactor Cores
High power density reactors based on direct cooled particle beds, 11:29783 (R;US)
SPACE PROPULSION REACTORS
Coated Fuel Particles
High flux research reactors based on particulate fuel, 11:29784 (R;US)
Forecasting
Future Air Force space power needs, 11:29560 (RA;US)
Fuel Elements
Particle bed reactor propulsion vehicle performance and characteristics as an orbital transfer rocket, 11:29824 (R;US)
SPACECRAFT POWER SUPPLIES
Computer-Aided Design
MATPWR: a mission analysis tool for LEO spacecraft power profiles computation, 11:30397 (RA;FR)
Computerized Simulation
Spacecraft orbital power evaluation (SCOPE), 11:30396 (RA;FR)
Cost
Interplanetary exploration-A challenge for photovoltaics, 11:29456 (RA;US)
Design
Telecom 1 power subsystem from design to flight, 11:29508 (RA;FR)
Energy Balance
Spacecraft orbital power evaluation (SCOPE), 11:30396 (RA;FR)
Energy Consumption
MATPWR: a mission analysis tool for LEO spacecraft power profiles computation, 11:30397 (RA;FR)
Forecasting
Future Air Force space power needs, 11:29560 (RA;US)

Mass
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Meetings
Proceedings of ESA sessions at the 16th IEEE annual power electronics specialists conference, 11:29506 (R;FR)
Space photovoltaic research and technology 1985: high efficiency, space environment, and array technology, 11:29516 (R;US)
Mission Analysis
MATPWR: a mission analysis tool for LEO spacecraft power profiles computation, 11:30397 (RA;FR)
Nuclear Power Plants
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Performance
MARECS and ECS: the first few years in orbit, 11:29507 (RA;FR)
Physical Radiation Effects
Space Environment Workshop, 11:29544 (RA;US)
Power Demand
Power requirements for commercial communications spacecraft, 11:29561 (RA;US)
Reliability
Reliability and mass analysis of dynamic power conversion systems with parallel of standby redundancy, 11:29785 (R;US)
Specifications
ERS-1 power system, 11:29510 (RA;FR)
Giotto power supply subsystem, 11:29509 (RA;FR)

SPARK IGNITION ENGINES
Methanol Fuels
Research and development of alcohol fuel useage in spark-ignited engines, 11:30069 (R;US)

SPECTROPHOTOMETERS
Fiber Optics
Fiber optic modification of a diode array spectrophotometer, 11:30496 (R;US)

SPEED INDICATORS
See VELOCIMETERS

SPENT FUEL CASKS
Heat Transfer
BWR spent fuel storage cask performance test. Volume 1. Cask handling experience and decay heat, heat transfer, and shielding data, 11:29303 (R;US)
Materials Handling
Radiological analysis for dry cask storage of spent fuels, 11:29443 (RA;US)
Performance Testing
BWR spent fuel storage cask performance test. Volume 1. Cask handling experience and decay heat, heat transfer, and shielding data, 11:29303 (R;US)
Rail Transport
Assessment of spent nuclear fuel shipping cask handling capabilities of commercial light water reactors, 11:29304 (R;US)
Road Transport
Assessment of spent nuclear fuel shipping cask handling capabilities of commercial light water reactors, 11:29304 (R;US)
Shielding
BWR spent fuel storage cask performance test. Volume 1. Cask handling experience and decay heat, heat transfer, and shielding data, 11:29303 (R;US)

SPENT FUEL ELEMENTS
Dissolution
Fuel characterization research for the Canadian Nuclear Fuel Waste Management Program, 11:29315 (R;CA)
Leaching
Fuel characterization research for the Canadian Nuclear Fuel Waste Management Program, 11:29315 (R;CA)

SPENT FUEL STORAGE
See also DRY STORAGE
MONITORED RETRIEVABLE STORAGE
Survey and assessment of radioactive waste management facilities in the United States. Section 2.5. Air-cooled vault storage facilities, 11:29299 (R;US)

SPENT FUELS
Information Systems
Data processing in the integrated data base for spent fuel and radioactive waste, 11:29421 (BA;US)
Inventories
Data processing in the integrated data base for spent fuel and radioactive waste, 11:29421 (BA;US)
Monitored Retrievable Storage
Staff evaluation of US Department of Energy proposal for monitored retrievable storage, 11:29300 (R;US)
Radioactive Waste Disposal
Spent Fuel Test-Climax mineby revisited, 11:29418 (R;US)

SPENT LIQUORS
Evaporation
Vapour recompression evaporation of black liqour, 11:30026 (R;FI;In Finnish)
Physical Properties
Physical properties of spent liquor from chemical pulping processes, 11:30028 (R;FI;In Finnish)

SPENT SHALES
Chemical Composition
An evaluation of the effects of weathering on a 50-year old retorted oil-shale waste pile, Rulison Experimental Retort, Colorado, 11:29287 (BA;US)
Combustion
Nitric oxide (NO) emissions from combustion of retorted oil shale, 11:29282 (BA;US)
Demetallization
Assessing potential trace metal leachability of retorted oil shale by complexometric agents, 11:29286 (BA;US)
Environmental Impacts
Hydrogeologic characterization of the Colony Shale Oil Project Area, 11:29256 (BA;US)
Hydraulic Conductivity
Liquid and vapor transport coefficients for retorted oil shale, 11:29284 (BA;US)
Leaching
Assessing potential trace metal leachability of retorted oil shale by complexometric agents, 11:29286 (BA;US)
Reduction-grade alumina and soda ash from Dawsonitic oil shale Section 1. Chemistry and process investigation, 11:29277 (BA;US)
Moisture
Liquid and vapor transport coefficients for retorted oil shale, 11:29284 (BA;US)
Retorting
Combustion heater for oil shale, 11:29265 (P;US)
Sorptive Properties
The effect of residual carbon on adsorption of organic compounds by retorted oil shale, 11:29285 (BA;US)
Waste Disposal
Liquid and vapor transport coefficients for retorted oil shale, 11:29284 (BA;US)
The effect of residual carbon on adsorption of organic compounds by retorted oil shale, 11:29285 (BA;US)
Weathering
An evaluation of the effects of weathering on a 50-year old retorted oil-shale waste pile, Rulison Experimental Retort, Colorado, 11:29287 (BA;US)

SPINELS
Chemical Radiation Effects
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:30306 (J;US)

SPIRAL ORBIT SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SPOIL BANKS
Acid Mine Drainage
Factors and treatment of abandoned acid mine lands for controlling nonpoint source pollution, 11:29192 (RA;US)
Classification
Factors and treatment of abandoned acid mine lands for controlling nonpoint source pollution, 11:29192 (RA;US)

Pollution Control
Factors and treatment of abandoned acid mine lands for controlling nonpoint source pollution, 11:29192 (RA;US)

SPR-3 REACTOR
Reactor Maintenance
Remote maintenance robot system for a pulsed nuclear reactor, 11:29822 (R;US)
Sensor-driven, fault-tolerant control of a maintenance robot, 11:29823 (R;US)
Robots
Remote maintenance robot system for a pulsed nuclear reactor, 11:29822 (R;US)
Sensor-driven, fault-tolerant control of a maintenance robot, 11:29823 (R;US)

SPRAY PONDS
See SPRAYS

SPRAYS
Design
Machine for applying a two component resin to a roadway surface, 11:30022 (P;US)

STAINLESS STEEL-304
Cavitation
Mechanics and mechanisms of intergranular cavitation in creeping alloys, 11:30118 (BA;NL)
Crack Propagation
Stress corrosion crack growth rates in Type 304 stainless steel in simulated BWR environments, 11:29754 (J;US)
Heat Transfer
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
Materials Testing
Stress corrosion crack growth rates in Type 304 stainless steel in simulated BWR environments, 11:29754 (J;US)
Stress Corrosion
Stress corrosion crack growth rates in Type 304 stainless steel in simulated BWR environments, 11:29754 (J;US)

STAINLESS STEEL-304L
Dynamic Loads
Technique for megabar controlled strain experiments, 11:30098 (R;US)
Shock Waves
Technique for megabar controlled strain experiments, 11:30098 (R;US)

STAINLESS STEEL-310
Mechanical Properties
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

STAINLESS STEEL-316
Corrosion
Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium, 11:31037 (RA;US)
Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li, 11:31038 (RA;US)
Environmental effects on properties of structural alloys in flowing lithium, 11:31039 (RA;US)
Creep
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Mechanical Properties
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
Neutronic Damage Functions
Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments, 11:31043 (RA;US)
Physical Radiation Effects
Effect of cold work on tensile behavior of irradiated type 316 stainless steel, 11:30086 (R;US)
Miniature tensile test specimens for fusion reactor irradiation studies, 11:31049 (RA;US)
Operation of the ORR spectral tailoring experiments (ORR-MFE-4A and ORB-MFE-4B), 11:31044 (RA;US)
Stress Corrosion
Stress corrosion cracking of PCA - initial considerations and characterization of grain boundary precipitation, 11:31042 (RA;US)

STAINLESS STEEL-316L
Corrosion
Study of metallic materials behavior in low oxygen activity atmospheres (Corrosion of alloy 800 H and steel 316L for coal gasification structural materials), 11:30077 (R;FR;In French)
Heat Transfer
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
Welded Joints
Study of crack inititation and propagation in heterogeneous welded joints, 11:30074 (R;FR;In French)

STAINLESS STEELS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-316L
Chemical Composition
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Chemical Reactions
Compatibility of Li_2O in a flowing helium environment, 11:31040 (RA;US)
Collisions
Microparticles and their effects in vacuum diodes, 11:30398 (J;US)
Fracture Properties
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements, 11:30096 (R;US)
Irradiation Procedures
US/Japan collaborative testing program in HFIR and ORR: specimen matrices for HFIR irradiation, 11:31050 (RA;US)
Materials Testing
FY 1984 and FY 1985 geochemistry and materials studies in support of the Magma Energy Extraction Program, 11:29639 (R;US)
Metallurgical Effects
Swelling behavior of titanium-modified alloys in EBR-II, 11:31054 (RA;US)
Microstructure
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Influence of titanium on the tempering structure of austenitic steels, 11:30078 (R;FR;In French)
Physical Radiation Effects
Assessment of helium effects on swelling by reirradiation in FFTF of Path A alloys previously irradiated in HFIR, 11:31048 (RA;US)
Irradiation experiments for the US/Japan collaborative testing program in HFIR and ORR, 11:31052 (RA;US)
Reirradiation in FFTF of swelling-resistant Path A alloys previously irradiated in HFIR, 11:31047 (RA;US)
Swelling behavior of titanium-modified alloys in EBR-II, 11:31054 (RA;US)
Swelling of Fe-Cr-Mn ternary alloys in FFTF, 11:31055 (RA;US)
Test matrices for irradiation of Path A Prime Candidate and developmental alloys in FFTF, 11:31046 (RA;US)
Poisson Ratio
Poisson's ratio measurements for martensitic stainless steels, 11:31065 (RA;US)

STANDARDS
See also SAFETY STANDARDS
Evaluated Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Experimental Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)
Theoretical Data
Annual progress report on nuclear data, 1984. Volume 3, 11:30891 (R;BE)

Water Quality
Division of Wetlands Ecology FY-1985 highlights, 11:30569 (RA;US)
STRESS ANALYSIS
Interferometry
Diffraction moire of dynamic events, 11:30383 (R;US)
STRESS (BIOLOGICAL)
See BIOLOGICAL STRESS
STRESS CORROSION
Grain boundary segregation and environmentally-induced fracture of materials, 11:30105 (R;US)
STRETFORD PROCESS
Processing in situ oil shale retort offgas with a Stretford plant at Geokinetics, 11:29280 (BA;US)
STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Dimensions
Critical dimensions for strings in a curved background, 11:30881 (R;IT)
Lectures
String primer, 11:30887 (R;US)
Preons
Do superstrings lead to quarks or to preons, 11:30861 (R;XA)
Quarks
Do superstrings lead to quarks or to preons, 11:30861 (R;XA)
STRIPED BASS
Temperature Effects
Temperature selection by juvenile striped bass in laboratory and field, 11:30702 (J;US)
STRONTIUM
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Ion Exchange
Vitrokele compositions: novel, high affinity, metal selective and regenerable media for the removal of radioactive metals from aqueous nuclear waste streams, 11:29357 (RA;US)
Multi-Photon Processes
Studies of autoionizing states relevant to dielectronic recombination. Progress report, July 1, 1985-June 30, 1986, 11:30812 (R;US)
STRONTIUM 90
Leaching
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 11:29422 (BA;US)
Uptake
Lysimeter study of vegetative uptake from saltstone. Part I. Design, installation, and data collection plan, 11:30582 (R;US)
Uptake of waste Sr 90 and Cs 137 by soil and vegetation, 11:30589 (J;US)
STRONTIUM CHLORIDES
Convection
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
Diffusion
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)

SUBBITUMINOUS COAL
Ash Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
Sulfur Content
Carbon dioxide for fine coal flotation. Second and third quarterly report, December 1985-May 1986, 11:29207 (R;US)
SUBURBS
See URBAN AREAS
SULFATES
See also COBALT SULFATES
POTASSIUM SULFATES
SODIUM SULFATES
Comparative Evaluations
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate

micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Ecological Concentration
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
Cross-sectional analysis of sulfate concentrations in the surface waters of New York and New England, 11:30608 (R;US)
Molecular Structure
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
Surface Properties
Electron spin echo modulation of doxylstearic acid probes of the surface and internal structure of lithium dodecyl sulfate micelles: comparison with sodium dodecyl sulfate and tetramethylammonium dodecyl sulfate micelles, 11:30242 (J;US)
SULFIDES
See also CARBON SULFIDES
HYDROGEN SULFIDES
IRON SULFIDES
SAMARIUM SULFIDES
SCANDIUM SULFIDES
Chemical Preparation
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS_5. A unique example of the twist-boat conformation of the MS_6 ring, 11:30319 (J;US)
Chemical Properties
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS_5. A unique example of the twist-boat conformation of the MS_6 ring, 11:30319 (J;US)
Crystal Structure
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS_5. A unique example of the twist-boat conformation of the MS_6 ring, 11:30319 (J;US)
Molecular Structure
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS_5. A unique example of the twist-boat conformation of the MS_6 ring, 11:30319 (J;US)
SULFITE WASTE LIQUOR
See SPENT LIQUORS
SULFOCYANIDES
See THIOCYANATES
SULFONIC ACIDS
Catalytic Effects
Methoxybenzo[a]pyrene 4,5-oxides labeled with carbon-13: electronic effects in the NIH shift, 11:30259 (J;US)
SULFUR
Combustion Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems. Quarterly report No. 3, 11:29187 (R;US)
Deposition
Cross-sectional analysis of sulfate concentrations in the surface waters of New York and New England, 11:30608 (R;US)
Estimates of long-term trends in sulfur deposition, 11:30525 (R;US)
Diffusion
Sulfur diffusion in oxide grain boundaries, 11:30117 (J;GB)
Environmental Transport
Estimates of long-term trends in sulfur deposition, 11:30525 (R;US)
Inventories
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Liquid Column Chromatography
Separation and characterization of coal derived components, 1 January 1986-31 March 1986, 11:29175 (R;US)
Production
[Great Plains Coal Gasification Associates]. Quarterly technical progress report, 11:29155 (R;US)
Thermochemical Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
SULFUR CARBIDES
See CARBON SULFIDES
SULFUR DIOXIDE
Air Pollution
Forecasting future industrial SO_2 and NO/sub x/ emissions, 11:30551 (J;US)
Air Pollution Abatement
Atmospheric FBC and CFB: the European approach, 11:29222 (R;SE)
Coal cleaning as an acid rain mitigation strategy: an in-depth examination, 11:29214 (J;US)
Air Pollution Control
Evaluation of an air curtain secondary hooding system, 11:30531 (RA;US)
Impact of proposed acid rain legislation on power plant particulate control equipment, 11:29692 (RA;US)
Biological Effects
Forecasting effects of SO_2 pollution on growth and succession in a western conifer forest, 11:30728 (J;US)
Control
Kinetics of nitrogen and sulfur reactions in combustion systems. Quarterly report No. 3, 11:29187 (R;US)
Ecological Concentration
Atmospheric gas and particle measurements at a rural northeastern US site, 11:30546 (J;GB)
Relative humidity: important modifier of pollutant uptake by plants, 11:30555 (J;US)
Emission
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Foliar Uptake
Relative humidity: important modifier of pollutant uptake by plants, 11:30555 (J;US)
Removal
Acid rain control options - impact on precipitator performance, 11:29734 (RA;US)
Comparison of dry injection systems at normal and high flue gas temperatures, 11:29195 (RA;US)
Design and operation of the baghouse at Holcomb Station, Unit No. 1, 11:29732 (RA;US)
Fabric filter operation downstream of a spray dryer: pilot and full-scale results, 11:29729 (RA;US)
Flue gas desulphurization and NO/sub x/ reduction, 11:29196 (R;SE)
Modeling of SO_2 removal in spray-dryer flue-gas desulfurization system, 11:29193 (RA;US)
Removal of sulfur dioxide and particulate using E-SOX, 11:29733 (RA;US)
Spray dryer/baghouse experiences on a 1000 ACFM pilot plant, 11:29731 (RA;US)
Start-up and operating experience with a reverse air fabric filter as part of the University of Minnesota dry FGD system, 11:29194 (RA;US)
Resonance Fluorescence
Method of using a nuclear magnetic resonance spectroscopy standard, 11:30549 (P;US)
SULFUR FLUORIDES
Dissociation
Vibrational predissociation of SF_6 clusters in a supersonic molecular beam, 11:30290 (J;US)
Electron-Molecule Collisions
S-wave threshold in electron attachment - observations and cross sections in CCl4 and SF6 at ultralow electron energies, 11:30818 (J;US)
Photolysis
Vibrational predissociation of SF_6 clusters in a supersonic molecular beam, 11:30290 (J;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE

Environmental Transport
Assessing environmental effects of oil-fuelled energy systems, 11:30527 (R;IT)

SULFUR SULFIDES
See SULFUR

SULFUR TRIOXIDE
Adsorption
Field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:29701 (RA;US)
Cleaning
Estimating the benefits of SO_3 gas conditioning on the performance of utility precipitators when burning US coals, 11:29690 (RA;US)

SULFURIC ACID
Chemical Reactions
Gas evolution oscillators. 6. Quantitative characterization of an experimental system, 11:30262 (J;US)
Decomposition
High-pressure catalytic metal reactor in a simulated solar central receiver, 11:29513 (R;US)
Removal
Analysis of air heater - fly ash - sulfuric acid vapor interactions, 11:29723 (RA;US)

SUPERALLOYS
See HEAT RESISTING ALLOYS

SUPERCONDUCTING CABLES
Design
Multistrand superconductor cable, 11:30358 (P;US)
Fabrication
Multistrand superconductor cable, 11:30358 (P;US)

SUPERCONDUCTING COILS
Design
Transitional behavior of pulsed dc losses in superconducting solenoids with self-fields greater than B*, 11:30355 (J;US)
Energy Losses
Transitional behavior of pulsed dc losses in superconducting solenoids with self-fields greater than B*, 11:30355 (J;US)

SUPERCONDUCTING MAGNETS
Current Limiters
Multivariable current control for electrically and magnetically coupled superconducting magnets, 11:31187 (J;US)
Design
Design of aggressive superconducting TFCX magnet systems, 11:31169 (J;US)
Octopole design concepts for the mirror end cell, 11:31184 (J;US)
Electric Currents
Multivariable current control for electrically and magnetically coupled superconducting magnets, 11:31187 (J;US)
Performance
Partial-array test results in IFSMTF, 11:31171 (J;US)
Performance Testing
Experience with operation of a large magnet system in the international fusion superconducting magnet test facility, 11:31170 (J;US)
Power Supplies
Multivariable current control for electrically and magnetically coupled superconducting magnets, 11:31187 (J;US)
Transition Temperature
Contribution to the study of superconducting magnets, 11:30339 (R;FR;In French)

SUPERCONDUCTING WIRES
Critical Current
Relationship between critical current and microstructure of internal tin wire, 11:30342 (R;US)

SUPERCONDUCTIVITY
Cooper Pairs
Theory of elementary excitations in intermediate valence materials, 11:30954 (BA;US)

SUPERCONDUCTORS
Impurities
Magnetic impurities in superconductors. Performance report, July 1, 1985-June 30, 1986, 11:30337 (R;US)

SUPERCRITICAL FLUID CHROMATOGRAPHY
Temperature Dependence
Temperature dependence of retention in supercritical fluid chromatography, 11:30182 (J;US)

SUPERCRITICAL GAS EXTRACTION
Research Programs
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, January 1-March 31, 1986, 11:29161 (R;US)

SUPERGRAVITY
Conformal Invariance
Superconformal invariance and the tensor multiplet in six dimensions, 11:30882 (R;IT)
Many-Dimensional Calculations
Stable compactifications, 11:30880 (R;US)
Particle Multiplets
Superconformal invariance and the tensor multiplet in six dimensions, 11:30882 (R;IT)

SUPERLATTICES
Dislocations
Dislocation reduction in epitaxial GaAs on Si (100), 11:30165 (J;US)

SUPERSONIC FLOW
Algorithms
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)
Computer Codes
Investigation of chemically-reacting supersonic internal flows. Progress report, 11:30034 (R;US)

SUPERSYMMETRY
Electron-Positron Interactions
New particle searches at e^+e machines, 11:30838 (R;FR)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SURFACE AIR
Air Pollution Monitoring
Ozone measurements near the ground and in the atmosphere in the first half-year 1985, 11:30541 (R;DE;In German and English)

SURFACE AREA
Measuring Methods
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)

SURFACE MINING
Acid Mine Drainage
Acid mine drainage: surface mine treatment and in-situ abatement technology, 11:29189 (RA;US)
Environmental Impacts
Uncertainties in predicting fugitive dust emissions and concentrations around western surface coal mines, 11:29201 (J;US)
Land Reclamation
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Trends in post-mining land uses - are we doing our children justice?, 11:29190 (RA;US)

SURFACE TREATMENTS
Research Programs
Chemistry research resource. Progress report, March 1986, 11:30175 (R;US)

SURFACE WATERS
See also LAKES
STREAMS
Acidification
Cross-sectional analysis of sulfate concentrations in the surface waters of New York and New England (ASTRAP), 11:30608 (R;US)
Chemical Composition
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
Water Quality
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)

SURFACE-ACTIVE AGENTS
See SURFACTANTS

SURFACES
Form Factors
Computer model for evaluation of form factors and interreflected radiant exchange for irregular geometrics with partial obstruction, 11:29499 (RA;US)
SURFACTANTS
Improvement of CO_2 flood performance. Annual report, April 1, 1984-September 30, 1985, 11:29234 (R;US)
Improvement of CO_2 flood performance. Annual report, 11:29236 (R;US)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEDEN
Commercial Sector
Utility perspective on commercial sector markets, 11:29970 (RA;US)
Energy Conservation
Stockholm project. Quality control of energy-efficient settlement, 11:29992 (R;SE;In Swedish)
Public Utilities
Utility perspective on commercial sector markets, 11:29970 (RA;US)
Service Sector
Energy use in the service sector in Sweden, 11:29951 (RA;US)

Chemical Preparation
Marketable transport fuels from Julia Creek shale oil, 11:29273 (BA;US)
SYNTHETIC FUELS INDUSTRY
Labor Relations
The Mancamp Issue: Toward a good neighbor policy for major energy/minerals developments, 11:29942 (BA;US)
Minority Groups
Development of new business opportunities for minorities in the synthetic fuels program. Executive summary. Final report, August 11, 1980-June 27, 1981, 11:29941 (R;US)
Personnel Management
The Mancamp Issue: Toward a good neighbor policy for major energy/minerals developments, 11:29942 (BA;US)
Small Businesses
Development of new business opportunities for minorities in the synthetic fuels program. Executive summary. Final report, August 11, 1980-June 27, 1981, 11:29941 (R;US)
SYNTHETIC NATURAL GAS
See HIGH BTU GAS
SYSTEMS ANALYSIS
Used in the fields of technology research and management for problems such as the calculation of failure probabilities and for reliability studies of systems and components.
Computerized Simulation
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)
Data Base Management
System Analysis and Risk Assessment (SARA) system, 11:29834 (R;US)

T

T INVARIANCE
Symmetry Breaking
Tests of T-invariance with slow neutrons, 11:30947 (R;US)
TAIWAN
Commercial Sector
Commercial sector energy consumption in Taiwan, R.O.C., 11:29958 (RA;US)
Imports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)
Service Sector
Electricity use in Taiwan's service sector, 11:29957 (RA;US)
TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES
TANDEM MIRROR TYPE REACTORS
See TMR REACTORS
TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES
ICR Heating
ICRF wave propagation and absorption in axisymmetric mirrors. Annual report, July 1, 1985-February 28, 1986, 11:30964 (R;US)
Magnet Coils
Magnetic ripple correction in tandem mirrors by ferromagnetic inserts, 11:31182 (J;US)
Magnetic Field Ripples
Magnetic ripple correction in tandem mirrors by ferromagnetic inserts, 11:31182 (J;US)
TANK FARMS
See STORAGE FACILITIES
TANTALATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
TANTALUM
Physical Radiation Effects
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys (Candidate window materials for SIN beam stop), 11:30099 (R;US)
TANTALUM 178
Radiation Doses
Development of tungsten-tantalum generator. Final report, 11:30310 (R;US)
Radioisotope Generators
Development of tungsten-tantalum generator. Final report, 11:30310 (R;US)
TANTALUM ALLOYS
See also INCONEL 625
Stability
Thermal aging effects in refractory metal alloys, 11:29786 (R;US)

Radio frequency vacuum feedthroughs for high-power ICRF heating applications, 11:31192 (J;US)
Vacuum Systems
Radio frequency vacuum feedthroughs for high-power ICRF heating applications, 11:31192 (J;US)
TFCX REACTORS
Configuration
Fusion reactor and test cell configuration, 11:31109 (J;US)
Tokamak Fusion Core Experiment maintenance study, 11:31108 (J;US)
Current Density
TFCX current density and nuclear heating limitations for superconducting Tokamaks, 11:31166 (J;US)
Design
Tokamak Fusion Core Experiment maintenance study, 11:31108 (J;US)
Tokamak Fusion Core Experiment facilities Functional and Operational Requirements, 11:31127 (J;US)
Environmental Impacts
Issues relating to the siting of tritium-fueled fusion experiments, 11:31214 (J;US)
Impurities
Impurity control and vacuum pumping system design and analysis for next-generation tokamaks, 11:31153 (J;US)
Limiters
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)
Magnet Coils
Hot spots in the inboard section of the TFCX toroidal field coils, 11:31183 (J;US)
Maintenance
Tokamak Fusion Core Experiment maintenance study, 11:31108 (J;US)
Tokamak Fusion Core Experiment (TFCX) special-purpose remote maintenance systems, 11:31114 (J;US)
Modular Structures
Fusion reactor and test cell configuration, 11:31109 (J;US)
Operations Research
Tokamak Fusion Core Experiment facilities Functional and Operational Requirements, 11:31127 (J;US)
Plasma Diagnostics
Low-temperature plasma near a tokamak reactor limiter, 11:30987 (J;US)
Poloidal Field Divertors
Impact of a poloidal divertor in ignition tokamak design, 11:31186 (J;US)
Pumped Limiters
Impurity control and vacuum pumping system design and analysis for next-generation tokamaks, 11:31153 (J;US)
Radiation Hazards
Issues relating to the siting of tritium-fueled fusion experiments, 11:31214 (J;US)
Remote Handling
Tokamak Fusion Core Experiment (TFCX) special-purpose remote maintenance systems, 11:31114 (J;US)
Shields
TFCX shielding optimization, 11:31149 (J;US)
Site Selection
Issues relating to the siting of tritium-fueled fusion experiments, 11:31214 (J;US)
Specifications
Tokamak Fusion Core Experiment facilities Functional and Operational Requirements, 11:31127 (J;US)
Superconducting Magnets
Design of aggressive superconducting TFCX magnet systems, 11:31169 (J;US)
TFCX current density and nuclear heating limitations for superconducting Tokamaks, 11:31166 (J;US)
Temperature Effects
TFCX current density and nuclear heating limitations for superconducting Tokamaks, 11:31166 (J;US)
TFR TOKAMAK
ICR Heating
Theoretical and experimental study of modes associated to ion cyclotron heating on TFR, 11:30967 (R;FR;In French)
Xenon Ions
Identification of highly-ionized xenon spectra (Xe XXVI through Xe XXXI) excited in the plasma of the TFR Tokamak, 11:30966 (R;FR)
X-Ray Spectroscopy
Identification of highly-ionized xenon spectra (Xe XXVI through Xe XXXI) excited in the plasma of the TFR Tokamak, 11:30966 (R;FR)
TFTR DEVICE
See TFTR TOKAMAK
TFTR REACTORS
See TFTR TOKAMAK
TFTR TOKAMAK
Beam Injection Heating
Neutral beam orientation on the Tokamak Fusion Test Reactor, 11:31008 (J;US)
Neutral beam heating system for TFTR, 11:31198 (J;US)
Control
TFTR plasma feedback systems, 11:31004 (J;US)
Current-Drive Heating
Neutral beam orientation on the Tokamak Fusion Test Reactor, 11:31008 (J;US)
Eddy Currents
Eddy current modelling and poloidal field penetration in TFTR, 11:31260 (BA;US)
Efficiency
Neutral beam orientation on the Tokamak Fusion Test Reactor, 11:31008 (J;US)

Heating Systems
TFTR bakeout system, 11:31209 (J;US)
Magnetic Islands
Note on the Mirnov signal analysis in tokamaks, 11:30992 (J;AT)
Magnetic Susceptibility
Eddy current modelling and poloidal field penetration in TFTR, 11:31260 (BA;US)
Neutral Atom Beam Injection
Neutral beam orientation on the Tokamak Fusion Test Reactor, 11:31008 (J;US)
Neutral beam heating system for TFTR, 11:31198 (J;US)
Plasma Confinement
Confinement studies in TFTR, 11:30995 (J;US)
Plasma Diagnostics
Note on the Mirnov signal analysis in tokamaks, 11:30992 (J;AT)
Shielding analysis for the horizontal x-ray imaging system on the TFTR, 11:31001 (J;US)
TFTR bakeout system, 11:31209 (J;US)
TFTR plasma feedback systems, 11:31004 (J;US)
Plasma Scrape-Off Layer
Characterization of the TFTR plasma edge by Langmuir-calorimeter probes, 11:30980 (R;US)
Power Losses
Neutral beam orientation on the Tokamak Fusion Test Reactor, 11:31008 (J;US)

THAILAND
Biomass Conversion Plants
Implementation of biogas strategy in livestock disciplines in Thailand, 11:29475 (RA;DE)
Promotion of biogas in rural Thailand by the Population and Community Development Association (PDA), 11:29476 (RA;DE)
Government Policies
Promotion of biogas in rural Thailand by the Population and Community Development Association (PDA), 11:29476 (RA;DE)

THERMAL DECAY TIME LOG

Cold fusion and graser prospects, 11:31257 (J;US)

THERMONUCLEAR REACTOR COOLING SYSTEMS
Comparative Evaluations
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)
Design
A comparison of Li and 83Pb-17Li primary coolant designs for the Pulse Star ICF Reactor, 11:31222 (J;US)

THERMONUCLEAR REACTOR MATERIALS
Alloy-HT-9
Poisson's ratio measurements for martensitic stainless steels, 11:31065 (RA;US)
Rapid solidification of candidate ferritic steels, 11:31064 (RA;US)
Austenitic Steels
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Chromium-Molybdenum Steels
Rapid solidification of candidate ferritic steels, 11:31064 (RA;US)
Comparative Evaluations
Helium-cooled blanket designs, 11:31104 (J;US)
Qualitative comparisons of fusion reactor materials for waste handling and disposal, 11:31212 (J;US)
Computerized Simulation
Surface effects on sputtered atoms and their angular and energy dependence, 11:31252 (J;US)
Corrosion
Corrosion of low activation austenitic alloys and standard Fe-12 Cr-1 MoVW steel in thermally convective lithium, 11:31037 (RA;US)
Corrosion of type 316 stainless steel and 12 Cr-1 MoVW steel in flowing Pb-17 at. % Li, 11:31038 (RA;US)
Environmental effects on properties of structural alloys in flowing lithium, 11:31039 (RA;US)
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Liquid-metal corrosion, 11:31098 (J;US)
Corrosion Fatigue
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Data Base Management
Structural materials data base assessment for the Blanket Comparison and Selection Study, 11:31100 (J;US)
Elasticity
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)
Embrittlement
Embrittlement of 2 1/4Cr-1Mo steel by lithium and a lead-lithium liquid, 11:31234 (J;US)
Erosion
Erosion tests of materials by energetic particle beams, 11:31233 (J;US)
Experiment Planning
Interactive effects and fluence goals, 11:31246 (J;US)
Ferritic Steels
Development of ferritic steels for fast induced-radioactivity decay, 11:31063 (RA;US)
Fluid-Structure Interactions
Safety considerations of lithium lead alloy as a fusion reactor breeding material, 11:31239 (J;US)
Irradiation Procedures
US/Japan collaborative testing program in HFIR and ORR: specimen matrices for HFIR irradiation, 11:31050 (RA;US)
Materials Testing
An assessment of radiation effects in beryllium, 11:31249 (J;US)
Current state of development and expected performance of copper-lithium alloys as an impurity control system in fusion applications, 11:31163 (J;US)
Design of self-cooled, liquid-metal blankets for tokamak and tandem mirror reactors, 11:31105 (J;US)
Interactive effects and fluence goals, 11:31246 (J;US)
Modeling of tritium transport in lithium aluminate fusion solid breeders, 11:31141 (J;US)
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Structural materials data base assessment for the Blanket Comparison and Selection Study, 11:31100 (J;US)
Test requirements for solid breeder blanket thermal behavior, 11:31134 (J;US)
Mechanical Properties
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Microstructure
Interstitial dislocation loop nucleation and growth and swelling produced by high-energy cascades, 11:31075 (R;US)
Physical Radiation Effects
An assessment of radiation effects in beryllium, 11:31249 (J;US)
Assessment of helium effects on swelling by reirradiation in FFTF of Path A alloys previously irradiated in HFIR, 11:31048 (RA;US)
Charpy impact test results of ferritic alloys at a fluence of 6 x 10^{22}n/cm^2, 11:31060 (RA;US)
Effect of helium on the tensile properties of several vanadium alloys, 11:31058 (RA;US)
Effect of nickel content on the aging and irradiation response of impact properties of 9 Cr-1 MoVNb and 12 Cr-1 MoVW in the absence of internal helium effects, 11:31061 (RA;US)
Effects of neutron irradiation at 450°C and 16 dpa on the properties of various commercial copper alloys, 11:31036 (RA;US)
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
Effects of irradiation on the fracture toughness of HT-9, 11:31066 (RA;US)
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)
Erosion tests of materials by energetic particle beams, 11:31233 (J;US)
FFTF fusion irradiations - FFTF cycles 4-6, 11:31045 (RA;US)
Interactive effects and fluence goals, 11:31246 (J;US)
Interstitial dislocation loop nucleation and growth and swelling produced by high-energy cascades, 11:31075 (R;US)
Irradiation experiments for the US/Japan collaborative testing program in HFIR and ORR, 11:31052 (RA;US)
Microstructural examination of several commercial alloys neutron irradiated to 100 dpa, 11:31034 (RA;US)
Miniature tensile test specimens for fusion reactor irradiation studies, 11:31049 (RA;US)
Neutronics calculations in support of the ORR-MFE-4A and -4B spectral tailoring experiments, 11:31043 (RA;US)
Operation of the ORR spectral tailoring experiments (ORR-MFE-4A and ORB-MFE-4B), 11:31044 (RA;US)
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)
Radiation effects in vanadium alloys in fusion reactor environments, 11:31057 (RA;US)
Reirradiation in FFTF of swelling-resistant Path A alloys previously irradiated in HFIR, 11:31047 (RA;US)

Response of selected high strength high conductivity copper alloys to simulated fusion irradiation and temperature conditions, 11:31035 (RA;US)
Self-sustaining coatings for fusion applications-copper lithium alloys, 11:31236 (J;US)
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
Solute segregation and void formation in ion-irradiated vanadium-base alloys, 11:31056 (RA;US)
Surface effects on sputtered atoms and their angular and energy dependence, 11:31252 (J;US)
Swelling behavior of titanium-modified alloys in EBR-II, 11:31054 (RA;US)
Swelling of Fe-Cr-Mn ternary alloys in FFTF, 11:31055 (RA;US)
Tensile properties of helium-injected V-15Cr-5Ti after irradiation in EBR-II, 11:31059 (RA;US)
Test matrices for irradiation of Path A Prime Candidate and developmental alloys in FFTF, 11:31046 (RA;US)
Vanadium alloy irradiation test matrix in FFTF, 11:31051 (RA;US)

Plasticity
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)

Radioactivation
Low activation burning core reactor design studies, 11:31241 (J;US)

Radioactive Waste Disposal
Qualitative comparisons of fusion reactor materials for waste handling and disposal, 11:31212 (J;US)

Research Programs
Eighth annual progress report on special purpose materials for magnetically confined fusion reactors, 11:31067 (R;US)
U.S. Blanket Technology Programs, 11:31132 (J;US)

Reviews
Solid tritium breeder materials-Li_2O and $LiAlO_2$: a data base review, 11:31097 (J;US)
U.S. Blanket Technology Programs, 11:31132 (J;US)

Service Life
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)

Stainless Steels
Development of austenitic steel for fast induced-radioactivity decay, 11:31053 (RA;US)
Poisson's ratio measurements for martensitic stainless steels, 11:31065 (RA;US)

Stress Analysis
Elastic-plastic analysis of slender first wall structures, 11:31136 (J;US)

Stress Corrosion
Stress corrosion cracking of PCA - initial considerations and characterization of grain boundary precipitation, 11:31042 (RA;US)

Temperature Effects
Radiation damage experiments and lifetime estimates for beryllium components in fusion systems, 11:31248 (J;US)

Test Facilities
Utilization of fission reactors for fusion engineering testing, 11:31247 (J;US)

Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiA1O_2$ solid breeders with and without irradiation effects, 11:31255 (J;US)

Underground Disposal
Qualitative comparisons of fusion reactor materials for waste handling and disposal, 11:31212 (J;US)

Volatility
Elemental volatility of HT-9 fusion reactor alloy, 11:31240 (J;US)

THORIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)

THORIUM 228
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)

THORIUM 229
Thermal Fission
Quasi-particle excitations in low energy fission, 11:30924 (R;FR)
THORIUM 230
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
THORIUM 232
Radioecological Concentration
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
Tissue Distribution
Studies of transport pathways of Th, rare earths, Ra-228, and Ra-226 from soil to plants and farm animals. Progress report, April 1, 1985-February 28, 1986, 11:30580 (R;US)
THORIUM COMPLEXES
Catalytic Effects
Supported f-element complexes: surface chemistry and catalysis. Final report, August 15, 1984-January 14, 1986, 11:30195 (R;US)
Chemical Preparation
C-H activation mechanisms and regioselectivity in the cyclometalation reactions of bis(pentamethylcyclopentadienyl)thorium dialkyl complexes, 11:30318 (J;US)
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS$_5$. A unique example of the twist-boat conformation of the MS$_5$ ring, 11:30319 (J;US)
Synthesis and X-ray structure of (C_5Me_5)$_2$Th(μ-PPh_2)$_2$Pt(PMe_3): a complex with a thorium-platinum bond, 11:30316 (J;US)
Chemical Properties
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS$_5$. A unique example of the twist-boat conformation of the MS$_5$ ring, 11:30319 (J;US)
Chemical Reactions
C-H activation mechanisms and regioselectivity in the cyclometalation reactions of bis(pentamethylcyclopentadienyl)thorium dialkyl complexes, 11:30318 (J;US)
Crystal Structure
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS$_5$. A unique example of the twist-boat conformation of the MS$_5$ ring, 11:30319 (J;US)
Synthesis and X-ray structure of (C_5Me_5)$_2$Th(μ-PPh_2)$_2$Pt(PMe_3): a complex with a thorium-platinum bond, 11:30316 (J;US)
Electronic Structure
C-H activation mechanisms and regioselectivity in the cyclometalation reactions of bis(pentamethylcyclopentadienyl)thorium dialkyl complexes, 11:30318 (J;US)
Molecular Structure
Preparation and characterization of the first organoactinide polysulfide (eta^5-C_5Me_5)$_2$ThS$_5$. A unique example of the twist-boat conformation of the MS$_5$ ring, 11:30319 (J;US)
THORIUM COMPOUNDS
Chemical Preparation
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of Th(CH_2Ph)$_4$($Me_2PCH_2CH_2PMe_2$) and U(CH_2Ph)$_3$Me($Me_2PCH_2CH_2PMe_2$), 11:30273 (J;US)
Crystal Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of Th(CH_2Ph)$_4$($Me_2PCH_2CH_2PMe_2$) and U(CH_2Ph)$_3$Me($Me_2PCH_2CH_2PMe_2$), 11:30273 (J;US)
Molecular Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of Th(CH_2Ph)$_4$($Me_2PCH_2CH_2PMe_2$) and U(CH_2Ph)$_3$Me($Me_2PCH_2CH_2PMe_2$), 11:30273 (J;US)
THORIUM CYCLE
Economics
Closed thorium cycles in the pebble bed HTR, 11:29775 (R;DE)
THORIUM D
See LEAD 208
THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA
Auxiliary Water Systems
TMI-2 defueling filter development tests, 11:29762 (RA;US)
Decontamination
Three Mile Island Unit 2 dry-canal defueling water cleanup system: an update, 11:29764 (RA;US)
TMI-2 defueling filter development tests, 11:29762 (RA;US)
Demineralizers
Processing and removal of the Three Mile Island makeup and purification system resins, 11:29832 (RA;US)
Radioactive Waste Disposal
Institutional agreements and interaction for research and disposition of nuclear waste from Three Mile Island, 11:29831 (RA;US)
Radioactive Waste Facilities
Three Mile Island Unit 2 dry-canal defueling water cleanup system: an update, 11:29764 (RA;US)
Radioactive Waste Processing
Processing and removal of the Three Mile Island makeup and purification system resins, 11:29832 (RA;US)
Radioactive Wastes
Structural analysis of TMI-2 defueling canisters, 11:29759 (RA;US)
TMI-2 defueling canister reactivity calculations, 11:29760 (RA;US)
Research Programs
US Department of Energy Three Mile Island research and development program. 1985 annual report, 11:29843 (R;US)
Spent Fuel Casks
Defueling canister designs for the TMI-2 core removal program, 11:29761 (RA;US)
Structural analysis of TMI-2 defueling canisters, 11:29759 (RA;US)
TMI-2 defueling canister reactivity calculations, 11:29760 (RA;US)
THYMIDINE
Chemical Preparation
Biomedical research with cyclotron produced radionuclides. Final report, February 1977-March 1986, 11:30662 (R;US)
THYROID
Biological Radiation Effects
Thyroid effects, 11:30695 (RA;US)
Neoplasms
Thyroid effects, 11:30695 (RA;US)
TIBET
Atmospheric Circulation
Plateau monsoons of the northern hemisphere: a comparison between North America and Tibet, 11:30522 (J;US)
TIGHT SANDS
See SANDSTONES
TIME PROJECTION CHAMBERS
See PROJECTION SPARK CHAMBERS
TIME-OF-FLIGHT SPECTROMETERS
Performance
Improved constant-Q spectrometer for pulsed neutron sources, 11:30486 (J;NL)
Pulsed Neutron Techniques
Improved constant-Q spectrometer for pulsed neutron sources, 11:30486 (J;NL)
TIME-REVERSAL INVARIANCE
See T INVARIANCE
TIME-SERIES ANALYSIS
Uses
Use of time series methods for estimating hazard, 11:30599 (RA;US)

TIN
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
TIN 111
De-Excitation
Gamma-decay of the 1gsub(9/2) and 2p inner-hole states in ^{111}Sn via the ^{112}Sn(^{3}He) reaction at 32 MeV, 11:30911 (R;FR)
TIN 112 TARGET
Helium 3 Reactions
Gamma-decay of the 1gsub(9/2) and 2p inner-hole states in ^{111}Sn via the ^{112}Sn(^{3}He) reaction at 32 MeV, 11:30911 (R;FR)
TIPVANE ROTORS
Performance
Analytical theory for rotor-tipvane performance and comparison with experimental results, 11:29656 (RA;DE)
Testing
Analytical theory for rotor-tipvane performance and comparison with experimental results, 11:29656 (RA;DE)
TISSUE-EQUIVALENT DETECTORS
Computer-Aided Design
A new type of REM measuring instrument, 11:30440 (J;US)
TITANIUM
Heat Transfer
Heat transfer coefficients for lead matrixing in disposal containers for used reactor fuel, 11:30071 (R;CA)
TITANIUM ADDITIONS
See also INCOLOY 800H
Physical Radiation Effects
Swelling behavior of titanium-modified alloys in EBR-II, 11:31054 (RA;US)
TITANIUM ALLOYS
See also TITANIUM ADDITIONS
Corrosion
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Corrosion Resistance
Corrosion behaviour of container materials for geological disposal of high level radioactive waste, 11:30092 (R;FR)
Hydridation
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)
Physical Radiation Effects
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys, 11:30085 (R;US)
Tensile properties of helium-injected V-15Cr-5Ti after irradiation in EBR-II, 11:31059 (RA;US)
TITANIUM BORIDES
Phase Studies
Secondary fluorescence effects on x-ray microanalysis, 11:30141 (J;US)
Sintering
Secondary fluorescence effects on x-ray microanalysis, 11:30141 (J;US)
TITANIUM HYDRIDES
Physical Radiation Effects
Advanced inboard shielding design for Tokamak fusion reactors, 11:31148 (J;US)
TITANIUM OXIDES
See also HOLLANDITE
Catalytic Effects
Use of organic molecules as mechanistic probes for semiconductor-mediated photoelectrochemical oxidations: bromide oxidation, 11:30265 (J;US)
Colloids
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)
Emission Spectroscopy
Photoelectrochemistry at particulate systems. 4. Photosensitization of a TiO_2 semiconductor with a chlorophyll analogue, 11:30284 (J;US)
Optical Properties
Reduction of substrate interference in Raman spectroscopy of submicron titania coatings, 11:30136 (J;US)
Photolysis
Photoelectrochemistry in particulate systems. 3. Phototransformations in the colloidal TiO_2-thiocyanate system, 11:30173 (J;US)
Raman Spectroscopy
Reduction of substrate interference in Raman spectroscopy of submicron titania coatings, 11:30136 (J;US)
Surface Area
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)
TMPN
See HYDROXY COMPOUNDS
ORGANIC OXYGEN COMPOUNDS
TMR REACTORS
Breeding Blankets
A comparative multidimensional nuclear analysis of candidate blanket designs for Tokamak and tandem mirror reactor concepts, 11:31095 (J;US)
Design of self-cooled, liquid-metal blankets for tokamak and tandem mirror reactors, 11:31105 (J;US)
Energy deposition and shielding requirements for all concepts of the Blanket Comparison and Selection Study, 11:31094 (J;US)
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Safety evaluation of the Blanket Comparison and Selection Study, 11:31107 (J;US)
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)
Computer-Aided Design
Plasma heating systems module for TMRSC, 11:31211 (J;US)
Tandem Mirror Reactor Systems Code (TMRSC), 11:31117 (J;US)
Coolants
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)
Demonstration Programs
Evolution of the Fusion Power Demonstration tandem mirror reactor configuration, 11:31128 (J;US)
Design
A module for testing a lithium cooled tokamak blanket in a tandem mirror test reactor, 11:31152 (J;US)
Evolution of the Fusion Power Demonstration tandem mirror reactor configuration, 11:31128 (J;US)
Plasma engineering for MINIMARS: a small commercial tandem mirror reactor with octopole plugs, 11:31168 (J;US)
Energy Balance
Tandem Mirror Reactor power balance studies, 11:31115 (J;US)
Energy Efficiency
Tandem Mirror Reactor power balance studies, 11:31115 (J;US)
First Wall
Structural analysis under the Blanket Comparison and Selection Study, 11:31099 (J;US)
Magnetic Fields
Physics-magnetics trade studies for tandem mirror reactors, 11:30997 (J;US)
Mission Analysis
Evolution of the Fusion Power Demonstration tandem mirror reactor configuration, 11:31128 (J;US)
Net Energy
Physics-magnetics trade studies for tandem mirror reactors, 11:30997 (J;US)
Neutron Flux
Neutronics activities for next generation devices, 11:31244 (J;US)
Octupolar Configurations
Plasma engineering for MINIMARS: a small commercial tandem mirror reactor with octopole plugs, 11:31168 (J;US)
Parametric Analysis
Neutronics activities for next generation devices, 11:31244 (J;US)
Plasma Heating
FPD plasma heating systems, 11:31208 (J;US)

Heating and pumping studies in the end cells of tandem-mirror reactors, 11:31011 (BA;US)
Plasma heating systems module for TMRSC, 11:31211 (J;US)
Pumping
Heating and pumping studies in the end cells of tandem-mirror reactors, 11:31011 (BA;US)
Reactor Safety
Safety evaluation of the Blanket Comparison and Selection Study, 11:31107 (J;US)
Reviews
Neutronics activities for next generation devices, 11:31244 (J;US)
Size
Plasma engineering for MINIMARS: a small commercial tandem mirror reactor with octopole plugs, 11:31168 (J;US)
Thermonuclear Reactor Materials
Design of self-cooled, liquid-metal blankets for tokamak and tandem mirror reactors, 11:31105 (J;US)
Overview of the Blanket Comparison and Selection Study, 11:31106 (J;US)

TMX DEVICES
Computerized Simulation
Modeling and optimization of operating parameters for a test-cell option of the Fusion Power Demonstration-II tandem mirror design, 11:31130 (J;US)
Plasma engineering models of tandem mirror devices with high-field test-cell inserts, 11:30996 (J;US)
Data Processing
Database tools for enhanced analysis of TMX-U data. Revision 1, 11:30984 (R;US)
Demonstration Programs
Modeling and optimization of operating parameters for a test-cell option of the Fusion Power Demonstration-II tandem mirror design, 11:31130 (J;US)
ICR Heating
ICRF heating of passing ions in TMX-U, 11:30985 (R;US)
Neutral Atom Beam Injection
Determining plasma-fueling sources with an end-loss ion spectrometer. Revision 1, 11:31082 (R;US)
Summary abstract: control of gas input and background pressure in the end plug regions of the TMX-U thermal barrier experiment, 11:31259 (J;US)
Operation
Modeling and optimization of operating parameters for a test-cell option of the Fusion Power Demonstration-II tandem mirror design, 11:31130 (J;US)
Plasma Confinement
Plasma engineering models of tandem mirror devices with high-field test-cell inserts, 11:30996 (J;US)
Pressure Control
Summary abstract: control of gas input and background pressure in the end plug regions of the TMX-U thermal barrier experiment, 11:31259 (J;US)
Reactor Fueling
Determining plasma-fueling sources with an end-loss ion spectrometer. Revision 1, 11:31082 (R;US)

TOGO
Energy Policy
Togo - energy situation 1984, 11:29928 (R;DE;In German)
Energy Supplies

ASDEX TOKAMAK
DOUBLET-3 DEVICE
TEXT DEVICES
TEXTOR TOKAMAK
TFR TOKAMAK
Alpha Particles
Method for determining fast-alpha-particle confinement in tokamak plasmas using resonant nuclear reactors, 11:30978 (R;US)
Design
A tokamak ignition/burn experimental research device, 11:31123 (J;US)
Diagnostic Techniques
Method for determining fast-alpha-particle confinement in tokamak plasmas using resonant nuclear reactors, 11:30978 (R;US)
ECR Heating
Electron cyclotron heating at down-shifted frequencies in existing tokamak devices, 11:30988 (J;AT)
ICR Heating
Electric and magnetic excitation of ICRF waves: eigenmodes and wave packets, 11:31023 (BA;US)
Plasma Density
Tokamak plasma density fluctuation studies using a multichannel scattering apparatus, 11:31015 (BA;US)
Plasma Diagnostics
Tokamak plasma density fluctuation studies using a multichannel scattering apparatus, 11:31015 (BA;US)
Plasma Macroinstabilities
Finite-beta global MHD stabilities for circular and highly-elongated tokamaks with and without poloidal divertors, 11:30970 (R;US)
Plasma Pressure
Pressure limits of an axisymmetric torus, 11:30981 (R;US)
Pumped Limiters
Neutral pumping rates for a next step tokamak ignition device, 11:31235 (J;US)
Pumping
Neutral pumping rates for a next step tokamak ignition device, 11:31235 (J;US)
Sizing
A tokamak ignition/burn experimental research device, 11:31123 (J;US)
Thermonuclear Ignition
A tokamak ignition/burn experimental research device, 11:31123 (J;US)
Neutral pumping rates for a next step tokamak ignition device, 11:31235 (J;US)

TRISTAN STORAGE RINGS
Transposable Ring Intersecting STorage Accelerators in Nippon.
Meetings
Proceedings of the first TRISTAN phase II workshop, 11:30831 (R;JP)
TRITIUM
Beta-Minus Decay
Electron antineutrino mass from the β-decay of ^3H, 11:30826 (RA;JP)
Breeding
A systematic methodology for estimating direct capital costs for blanket tritium processing systems, 11:31145 (J;US)
Measuring nanocurie quantities of tritium bred in metallic lithium and lithium oxide samples, 11:31204 (J;US)
Tritium breeding material : o $LiAlO_2$, 11:31160 (J;US)
Breeding Ratio
An assessment of tritium breeding requirements based on the tritium fuel cycle, 11:31088 (J;US)
Deuterium-tritium fuel self-sufficiency in fusion reactors, 11:31086 (J;US)
Uncertainties in prediction of tritium breeding in candidate blanket designs due to present uncertainties in nuclear data base, 11:31087 (J;US)
Containment
An assessment of problems associated with tritium containment, 11:31096 (J;US)
Emergency containment system, 11:29439 (RA;US)
Counter Current
Counter current extraction system for tritium recovery from 17Li-83Pb, 11:31144 (J;US)
Diffusion
Modeling of tritium transport in lithium aluminate fusion solid breeders, 11:31141 (J;US)
Summary abstract: reduction of tritium permeation through iron using aluminum ion implantation, 11:30113 (J;US)
Tritium breeding material : o $LiAlO_2$, 11:31160 (J;US)
Dose Rates
Calculation of dose rates from critical radionuclides in low-level radioactive waste disposal, 11:29444 (RA;US)
Extraction
Counter current extraction system for tritium recovery from 17Li-83Pb, 11:31144 (J;US)
Isotope Effects
Mound activities in chemical and physical research: July-December 1985, 11:30196 (R;US)
Neutral Beam Sources
Tritium system design for the mirror reactors FPD-I, FPD-II, and FPD-III, 11:31203 (J;US)
NMR Spectra
The determination of deuterium and tritium in effluent wastewater by pulsed nuclear magnetic resonance spectroscopy, 11:31101 (J;US)
Personnel Monitoring
Results of incorporation monitoring by excretion analyses performed at the Karlsruhe Nuclear Research Center during the years 1979 until 1984, 11:30694 (R;DE;In German)
Production
Fuel assembly for the production of tritium in light water reactors, 11:29755 (P;US)
Radiation Monitoring
Emergency containment system, 11:29439 (RA;US)
Management of high specific activity tritiated liquid wastes, 11:29407 (RA;US)
Radioactive Waste Disposal
Conceptual design for the injection of tritiated effluents into deep geological formations, 11:29361 (RA;US)
Radioactive Waste Processing
Solidification of enriched tritium from reprocessing, 11:29402 (R;DE;In German)

Radioecological Concentration
Surface tritium contamination studies, 11:29437 (RA;US)
Tritium surface contamination, 11:31102 (J;US)
Reviews
Tritium technology review, 11:31196 (J;US)
Solidification
Solidification of enriched tritium from reprocessing, 11:29402 (R;DE;In German)
Surface Contamination
Tritium surface contamination, 11:31102 (J;US)
TRITIUM PRODUCTION REACTORS
Design
An ICF Tritium production reactor, 11:31210 (J;US)
Inertial Confinement
An ICF Tritium production reactor, 11:31210 (J;US)
TRITIUM RECOVERY
In thermonuclear reactors and/or devices.
Low temperature distillation system for tritium recovery, 11:29406 (RA;US)
TRITIUM SYSTEMS TEST ASSEMBLY
Personnel
Tritium Systems Test Assembly operator training program, 11:31202 (J;US)
Quality Assurance
Tritium Systems Test Assembly Quality Assurance Program, 11:31201 (J;US)
TROUT
Environmental Effects
Control of productivity and population characteristics in aquatic communities. Progress report, 1 September 1982-31 August 1983, 11:30594 (R;US)
Population Dynamics
Use of a population model for estimating hazards: interpretation of low pH bioassay results with respect to Norwegian trout populations, 11:30598 (RA;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRUCKS
Design
Technological advances in vehicle design: Ford energy report, 11:30047 (B;GB)
Meetings
Technological advances in vehicle design: Ford energy report, 11:30047 (B;GB)

TUFF
Caliper Logging
Preliminary analysis of geophysical logs from the WT series of drill holes, Yucca Mountain, Nye County, Nevada (NNWSI project), 11:30748 (R;US)
Flow Models
Fluid flow in a fractured rock mass (NNWSI Project), 11:30742 (R;US)
Fluid Flow
Fluid flow in a fractured rock mass (NNWSI Project), 11:30742 (R;US)
Fracturing
Effects of wellbore liquids in propellant-based fracturing, 11:29251 (R;US)
Gamma Logging
Preliminary analysis of geophysical logs from the WT series of drill holes, Yucca Mountain, Nye County, Nevada (NNWSI project), 11:30748 (R;US)
Hydrothermal Alteration
Expected thermal and hydrothermal environments for waste emplacement holes based on G-tunnel heater experiments (NNWSI project), 11:30749 (R;US)
Neutron Logging
Preliminary analysis of geophysical logs from the WT series of drill holes, Yucca Mountain, Nye County, Nevada (NNWSI project), 11:30748 (R;US)
Permeability
Permeability and pore-fluid chemistry of the Bullfrog Tuff in a temperature gradient: summary of results, 11:30761 (R;US)
Resistivity Logging
Preliminary analysis of geophysical logs from the WT series of drill holes, Yucca Mountain, Nye County, Nevada (NNWSI project), 11:30748 (R;US)
Temperature Effects
Expected thermal and hydrothermal environments for waste emplacement holes based on G-tunnel heater experiments (NNWSI project), 11:30749 (R;US)
TUMORS
See NEOPLASMS
TUNDRA
Productivity
Potential responses of tundra ecosystems to perturbations from energy development. Part I. Annual report, 1983, 11:30591 (R;US)
TUNGSTEN
Emission Spectra
Effect of organic gases on molecular formation reactions in the DCP, 11:30238 (R;US)
Physical Radiation Effects
Advanced inboard shielding design for Tokamak fusion reactors, 11:31148 (J;US)
TUNGSTEN 166
High Spin States
Spectroscopy of ^{166}W and ^{167}W and alignment effects in very neutron-deficient tungsten nuclei, 11:30916 (R;AU)
TUNGSTEN 167
High Spin States
Spectroscopy of ^{166}W and ^{167}W and alignment effects in very neutron-deficient tungsten nuclei, 11:30916 (R;AU)
TUNGSTEN 178
Radioisotope Generators
Development of tungsten-tantalum generator. Final report, 11:30310 (R;US)
TUNGSTEN ALLOYS
See also ALLOY-CB-752
Physical Radiation Effects
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)
TUNGSTEN CARBIDES
Absorption Spectroscopy
Determination of cobalt in samples containing cobalt and tungsten carbide by electrothermal atomic absorption spectrometry, 11:30548 (J;US)
TUNGSTEN COMPLEXES
Chemical Preparation
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)
Crystal Structure
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)
Molecular Structure
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)
TUNGSTEN COMPOUNDS

URANIUM
Adsorption
Interaction of groundwater and basalt fissure surfaces and its effect on the migration of actinides, 11:30586 (J;US)
Chemical Reaction Kinetics
Equilibrium and kinetic studies of the reductive stripping of uranium from DEPA-TOPO reagent into aqueous phosphoric acid, 11:29424 (J;NL)
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Energy Levels
Wavelengths and energy levels of doubly ionized uranium (U III) obtained using a Fourier-transform spectrometer, 11:30321 (J;US)
Ion Exchange
Characterization and anion exchange removal of uranium from Hanford ground water, 11:30616 (R;US)
Ionization
Wavelengths and energy levels of doubly ionized uranium (U III) obtained using a Fourier-transform spectrometer, 11:30321 (J;US)
Isotope Ratio
Removal of isobaric interferences by resonance ionization mass spectrometry, 11:30188 (J;US)
Partition
Acid-split flowsheets for uranium-plutonium partitioning without a reductant, 11:29293 (R;US)
Personnel Monitoring
Results of incorporation monitoring by excretion analyses performed at the Karlsruhe Nuclear Research Center during the years 1979 until 1984, 11:30694 (R;DE;In German)
Quantitative Chemical Analysis
Use of arsenazo-III for the determination of uranium in phosphate materials. Study of interfering elements, 11:30180 (RA;BR;In Portuguese)
Radiochemistry
Characterization and anion exchange removal of uranium from Hanford ground water, 11:30616 (R;US)
Radiochemistry of uranium, neptunium and plutonium: an updating, 11:30311 (R;US)
Reduction
Equilibrium and kinetic studies of the reductive stripping of uranium from DEPA-TOPO reagent into aqueous phosphoric acid, 11:29424 (J;NL)
Solvent Extraction
Equilibrium and kinetic studies of the reductive stripping of uranium from DEPA-TOPO reagent into aqueous phosphoric acid, 11:29424 (J;NL)
URANIUM 232
Thermal Fission
Post-neutron mass distribution for ^{233}U(nsub(th),f), 11:30925 (R;FR)
Quasi-particle excitations in low energy fission, 11:30924 (R;FR)
URANIUM 233
Breeding Ratio
Nuclear performance optimization of the Be/Li/Th blanket for the fusion breeder, 11:31133 (J;US)
Fusion Yield
Design of a helium-cooled molten-salt fusion breeder, 11:31143 (J;US)
URANIUM 235
Laser Isotope Separation
Production of a Raman laser at 16 μm (For uranium enrichment by lasers), 11:29290 (R;FR;In French)
Thermal Fission
Cold fragmentation in thermal neutron induced fission of ^{235}U, 11:30926 (R;FR)
URANIUM 238 TARGET
Alpha Reactions
Excitation function and half-life for the fission isomer sup(240m) Pu from the ^{238}U(α, 2n) sup(240m) Pu reaction, 11:30928 (R;BR)
URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Physical Radiation Effects
Gas-bubble growth mechanisms in the analysis of metal fuel swelling, 11:30082 (R;US)
URANIUM BASE ALLOYS
Hydridation
Study of the hydridation of an uranium alloy containing 0.2 weight percent of vanadium, 11:30073 (R;FR;In French)
Quenching
Computer simulation of quenching uranium-0.75% titanium penetrator blanks. Final report for FY 1984, 11:30106 (R;US)
URANIUM COMPLEXES
Chemical Preparation
Preparation of the first molecular carbon monoxide complex of uranium, $(Me_3SiC_5H_4)_3UCO$, 11:30317 (J;US)
Crystal Structure
Preparation of the first molecular carbon monoxide complex of uranium, $(Me_3SiC_5H_4)_3UCO$, 11:30317 (J;US)
URANIUM COMPOUNDS
Chemical Preparation
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Crystal Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2CH_2PMe_2)$ and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)
Magnetic Susceptibility
Electronic structure of the uranium(IV)-tetrakis-1,1,1-trifluoro-4-phenylbutane-2,4-dionato: magnetochemical study, 11:30152 (R;FR;In French)
Molecular Structure
Preparation of tetraalkyl phosphine complexes of the f-block metals. Crystal structure of $Th(CH_2Ph)_4(Me_2PCH_2$

CH_2PMe_3) and $U(CH_2Ph)_3Me(Me_2PCH_2CH_2PMe_2)$, 11:30273 (J;US)

URANIUM DIOXIDE
Chemical Preparation
Study of reducing pyrohydrolysis of uranyl fluoride into uranium dioxide, 11:29291 (R;FR;In French)
Thermal Conductivity
Thermal conductivities for sintered and sphere-pac Li_2O and gamma-$LiAlO_2$ solid breeders with and without irradiation effects, 11:31255 (J;US)

URANIUM HEXAFLUORIDE
Cylinders
Thermal analysis of UF_6 cylinder inside a protective overpack, 11:30385 (R;US)
Dissociation
Single shot laser multiphoton ionization detection of UF_5 following the 266 nm photodissociation of UF_6, 11:30300 (J;CH)
Photochemistry
Single shot laser multiphoton ionization detection of UF_5 following the 266 nm photodissociation of UF_6, 11:30300 (J;CH)
Weight Measurement
Load-cell-based weighing system for weighing 9.1 and 12.7-tonne UF_6 cylinders, 11:29452 (R;US)

URANIUM ISOTOPES
See also URANIUM 232
URANIUM 233
URANIUM 235
Isotope Separation
Uranium enrichment by solvent extraction, 11:29289 (R;FR)

Exports
Coal: evolving supply and demand in world seaborne steam coal trade (1975 to 1985; forecasting to 1995), 11:29225 (R;US)

UTAH
Uranium Deposits
Structure and uranium deposits of the Salina Quadrangle, Utah, 11:29288 (R;US)

UTILITIES
See ELECTRIC UTILITIES
PUBLIC UTILITIES

V

VACUUM SYSTEMS
Design
Design of vacuum systems for MFTF-B neutral beamlines, 11:31205 (J;US)

VALINE
Metabolism
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1985, 11:30663 (R;US)

VALVES
Electroslag Casting
Fossil Energy Program. Quarterly progress report for the period ending December 31, 1985, 11:29152 (R;US)
Field Tests
Evaluation of the Motor-Operated Valve Analysis and Test System (MOVATS) to detect degradation, incorrect adjustments, and other abnormalities in motor-operated valves, 11:29802 (R;US)

VANADIUM
Physical Radiation Effects
Solute segregation and microstructural evolution in ion-irradiated vanadium-base alloys, 11:30084 (R;US)

VANADIUM ALLOYS
See also VANADIUM BASE ALLOYS
Hydridation
Advanced hydrogen storage: modified vanadium hydrides. Final report, 11:29459 (R;US)
Physical Radiation Effects
Effects of irradiation on low activation ferritic alloys, 11:31062 (RA;US)
Tensile Properties
Postirradiation tensile behavior of nickel-doped ferritic steels, 11:30080 (R;US)

VANADIUM BASE ALLOYS
See also VANSTAR 7
Corrosion
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Embrittlement
Vanadium alloys for fusion reactor first wall application, 11:30089 (R;US)
Physical Radiation Effects
Effect of helium on the tensile properties of several vanadium alloys, 11:31058 (RA;US)
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys, 11:30085 (R;US)
FFTF fusion irradiations - FFTF cycles 4-6, 11:31045 (RA;US)
Radiation effects in vanadium alloys in fusion reactor environments, 11:31057 (RA;US)
Solute segregation and void formation in ion-irradiated vanadium-base alloys, 11:31056 (RA;US)
Solute segregation and microstructural evolution in ion-irradiated vanadium-base alloys, 11:30084 (R;US)
Tensile properties of helium-injected V-15Cr-5Ti after irradiation in EBR-II, 11:31059 (RA;US)
Vanadium alloy irradiation test matrix in FFTF, 11:31051 (RA;US)
Radioactivation
Vanadium alloys for fusion reactor first wall application, 11:30089 (R;US)
Swelling
Radiation effects in vanadium alloys in fusion reactor environments, 11:31057 (RA;US)

VANADIUM COMPLEXES
Chemical Preparation
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)
Crystal Structure
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)
Molecular Structure
Study of sulfur ligand reactivity in dimeric dithiolate complexes of vanadium and tungsten, 11:30280 (J;US)

VANADIUM COMPOUNDS
See also VANADIUM OXIDES
Crystal-Phase Transformations
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Formation Free Energy
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Specific Heat
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)
Stability
Transformation characteristics of LaV/sub x/Nb/sub 1-x/O_4 compounds, 11:30138 (J;US)

VANADIUM MINERALS
See MINERALS

VANADIUM OXIDES
Crystal Structure
Partial structure-field map for $A^{3+}B^{5+}O_4$ compounds, 11:30135 (J;NL)

VANSTAR 7
Corrosion
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Fatigue
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures, 11:30090 (R;US)
Physical Radiation Effects
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys, 11:30085 (R;US)
Thermal Cycling
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures, 11:30090 (R;US)

VAPOR CONDENSERS
Efficiency
Supercritical binary geothermal cycle experiments with mixed-hydrocarbon working fluids and a vertical, in-tube, counterflow condenser, 11:29629 (R;US)
VAPOR PRESSURE
Computer Codes
Revision of Primary Standards Laboratory's methods to calculate water vapor pressures, 11:31286 (R;US)
VAPORS
Deposition
Particle and vapor deposition in coal-fired gas turbines, 11:29669 (R;US)
VEGETATION
See PLANTS
VEHICLES
See also AUTOMOBILES
ELECTRIC-POWERED VEHICLES
TRUCKS
Design
Technological advances in vehicle design: Ford energy report, 11:30047 (B;GB)
Meetings
Technological advances in vehicle design: Ford energy report, 11:30047 (B;GB)
VELOCIMETERS
Construction
Measurement of the electrokinetic transport properties of particles in an electrostatic precipitator, 11:29744 (RA;US)
VENEZUELA
Climates
Use of geoclimatic data for the determination of building characteristics in the north of the Venezuelan Republic, 11:29598 (RA;US)
VENTILATION
Economics
Possibilities of developing the energy-effiency of ventilation systems, equipment and components. A pilot study, 11:29999 (R;FI;In Finnish)
Energy Conservation
Possibilities of developing the energy-effiency of ventilation systems, equipment and components. A pilot study, 11:29999 (R;FI;In Finnish)
VENTILATION DUCTS
See DUCTS
VENTILATION
VENTILATION SYSTEMS
Design
Possibilities of developing the energy-effiency of ventilation systems, equipment and components. A pilot study, 11:29999 (R;FI;In Finnish)
VERSENE
See EDTA
VERTICAL AXIS TURBINES
Aerodynamics
Aeroelastic effects in the structural dynamic analysis of vertical axis wind turbines, 11:29664 (R;US)
VESSELS
See CONTAINERS
VESSELS (CHEMICAL REACTIONS)

VIBRATIONAL STATES
Frequency Measurement
Frequency shift measurement in shock-compressed materials, 11:30516 (P;US)
VIBRATIONS (MECHANICAL)
See MECHANICAL VIBRATIONS
VIET NAM
Biomass Conversion Plants
Possibilities and limits of community biogas plants in the frame work of biogas propagation strategy in Viet Nam, 11:29477 (RA;DE)
Government Policies
Possibilities and limits of community biogas plants in the frame work of biogas propagation strategy in Viet Nam, 11:29477 (RA;DE)
VILLIGEN CYCLOTRON
See SIN CYCLOTRON
VINYL MONOMERS
Pyrolysis
Formation of benzene by the pyrolysis of 4-vinylcyclohexene regiospecific formation of anthracenes in the pyrolysis of dibenzosuberones and related systems, 11:30271 (D;US)
VISCOUS FLOW
Computer Codes
TRIO a general computer code for reactor 3-D flows analysis. Application to a LMFBR hot plenum, 11:30376 (R;FR)
Three-Dimensional Calculations
TRIO a general computer code for reactor 3-D flows analysis. Application to a LMFBR hot plenum, 11:30376 (R;FR)
VISIBLE RADIATION
Biological Effects
Influence of shade on the growth and nitrogen assimilation of developing fruits on bell pepper, 11:30656 (J;US)
Health Hazards
Memorandum - optical radiation danger when using RSV, 11:30730 (TG;US)
VISIBLE SPECTRA
Pressure Dependence
High-pressure study of triphenylmethane dyes in polymeric and aqueous media, 11:30249 (J;US)
VISITOR CENTERS

W

WALLS
Geometry
Effect of wall geometry on net heat gain or loss, 11:30009 (RA;US)
WASHINGTON
Radioactive Waste Facilities
Through the regulatory hoop, 11:29322 (RA;US)
WASTE BURIAL
See UNDERGROUND DISPOSAL
WASTE CHEMICALS
See CHEMICAL WASTES
WASTE FORMS
Extended storage of low-level radioactive waste: potential problem areas, 11:30079 (RA;US)
Compression Strength
Stabilizing solidification I: a method of immobilization of radioactive waste involving volume reduction, 11:29345 (RA;US)
Density
Stabilizing solidification I: a method of immobilization of radioactive waste involving volume reduction, 11:29345 (RA;US)
Leaching
Hydrothermal flow-through apparatus to simulate leaching of nuclear waste forms under quasi-dynamic conditions, 11:29431 (R;CA)
Scientific basis for nuclear waste management IX, 11:29420 (B;US)
Stabilizing solidification I: a method of immobilization of radioactive waste involving volume reduction, 11:29345 (RA;US)
Transport of nitrate from a large cement based waste form (Saltstone), 11:29436 (R;US)

Performance
Fuel characterization research for the Canadian Nuclear Fuel Waste Management Program, 11:29315 (R;CA)
Specifications
Preliminary Hanford Waste Vitrification Plant waste form qualification plan, 11:29416 (R;US)
WASTE ISOLATION PILOT PLANT
See WIPP
WASTE MANAGEMENT
See also RADIOACTIVE WASTE MANAGEMENT
WASTE TRANSPORTATION
Remedial Action
Framework for resolving hazardous waste cleanup liability, 11:30593 (RA;US)
WASTE SOLUTIONS
See LIQUID WASTES
WASTE TRANSPORTATION
Computerized Simulation
U.S. Department of Energy transportation programs: computerized techniques, 11:29308 (BA;US)
Remote Handling Equipment
Use of remote systems and automation in radioactive waste shipping and receiving, 11:29306 (R;US)
WASTE WATER
Anaerobic Digestion
Anaerobic digestion of slaughter waste water, 11:29469 (RA;DE)
Isotope Ratio
The determination of deuterium and tritium in effluent wastewater by pulsed nuclear magnetic resonance spectroscopy, 11:31101 (J;US)
Purification
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
Waste Disposal
The effect of residual carbon on adsorption of organic compounds by retorted oil shale, 11:29285 (BA;US)
Water Treatment
Process for removal of ammonia and acid gases from contaminated waters, 11:30031 (P;US)
WASTEFORMS
See WASTE FORMS
WATER
See also DRINKING WATER
FEEDWATER
GROUND WATER
SEAWATER
WASTE WATER
Convection
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
Corrosive Effects
Environmental effects on the properties of vanadium-base alloys, 11:31041 (RA;US)
Decomposition
Reduction of carbon dioxide by tris(2,2'-bipyridine) cobalt(I), 11:30225 (J;NL)
Diffusion
Experimental test of McDougall's theory for the onset of convective instabilities in isothermal ternary systems, 11:30200 (J;US)
Pumping
Biogas technology for water pumping in Botswana, 11:29464 (RA;DE)
Solvent Properties
Small-angle neutron-scattering study of alkyl polyoxyethylene sulfate micelles. Effect of the number of polyoxyethylene groups on n-dodecyl polyoxyethylene sulfate in D_2O/H_2O mixtures at 25°C, 11:30263 (J;US)
Thermodynamic Properties
Large-scale fluctuations and the critical behavior of dilute NaCl in H_2O, 11:30197 (J;US)
WATER COOLANT
See WATER
WATER MODERATOR
See WATER
WATER POLLUTION
Meetings
Perspectives on nonpoint source pollution - proceedings of a national conference, 11:29188 (R;US)
WATER QUALITY
Cost
Effect of distance on the preservation value of water quality, 11:29907 (J;US)
Monitoring
Great Plains coal gasification project. Quarterly technical progress report, first quarter 1986, 11:29198 (R;US)
WATER RESOURCES
Consumption Rates
Estimated use of water in the US in 1980, 11:30603 (R;US)
WATER SOURCE HEAT PUMPS
Refrigerants
Vertical recirculation-type evaporators. An investigation of heat transfer and refrigerant circulation, 11:29989 (R;SE;In Swedish)
WATER TABLES
Kriging
Geostatistical analysis of potentiometric data in Wolfcamp aquifer of the Palo Duro Basin, Texas, 11:30739 (R;US)
WATERBORNE PARTICLES
See PARTICULATES
WATERFLOODING
Comparative Evaluations
Evaluation of the Little Knife CO_2 minitest, 11:29233 (R;US)
Field Tests
Evaluation of the Little Knife CO_2 minitest, 11:29233 (R;US)
WATERSHEDS
Nutrients
Potential responses of tundra ecosystems to perturbations from energy development. Part I. Annual report, 1983, 11:30591 (R;US)
Runoff
Potential responses of tundra ecosystems to perturbations from energy development. Part I. Annual report, 1983, 11:30591 (R;US)
WAVE POWER
Appraisal
Wave energy. The Department of Energy's R and D programme 1974-1983, 11:29643 (R;GB)
WAVE PROPAGATION
Computerized Simulation
EURDYN-1D: a computer code for the one-dimensional non-linear dynamic analysis of structural systems. Description and users' manual (release 1) (Reactor structures), 11:31279 (R;FR)
WAVEGUIDES
ICRF heating technology development activities at Oak Ridge National Laboratory, 11:31026 (R;US)
Performance
Folded waveguide cavity coupler for ICRF heating, 11:31027 (R;US)
WAZ 16
See NICKEL BASE ALLOYS
WEAK HADRONIC DECAY
Bag Model
Non-leptonic hyperon decays in the chiral bag model, 11:30865 (R;FR)
WECS
See WIND TURBINES
WEIGHT INDICATORS
Load-cell-based weighing system for weighing 9.1 and 12.7-tonne UF_6 cylinders, 11:29452 (R;US)
Calibration
Tennessee Valley Authority coal inventory procedures and observations, 11:29682 (R;US)
WELDED JOINTS
Crack Propagation
Study of crack inititation and propagation in heterogeneous welded joints, 11:30074 (R;FR;In French)
Heat Affected Zone
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)

Residual Stresses
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
WELDING
See also ELECTRON BEAM WELDING
RESISTANCE WELDING
Transformers
400 Hz welding transformer gun assembly evaluation. Final report, 11:30394 (R;US)
Ultrasonic Testing
Ultrasonic inspection of partially completed welds using pattern recognition techniques, 11:30384 (R;US)
WELDS
See WELDED JOINTS
WELL CASINGS
Corrosion
Use of an acoustic borehole televiewer to investigate casing corrosion in geothermal wells, 11:29623 (R;US)
WELL DRILLING
Research Programs
Drilling technology/GDO, 11:29635 (RA;US)
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Design
Convective heat flow probe, 11:29624 (P;US)
Evaluation and design of a large spacing loop-loop electromagnetic tool, 11:30354 (R;US)
Electromagnets
Evaluation and design of a large spacing loop-loop electromagnetic tool, 11:30354 (R;US)
Well Logging
Method for isolating two aquifers in a single borehole, 11:30405 (P;US)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WETLANDS
Aerial Surveying
Variation of bulk density in Swedish peat bogs, 11:29203 (R;SE;In Swedish)
Ecology
Division of Wetlands Ecology FY-1985 highlights, 11:30569 (RA;US)
WHISKERS
Tensile Properties
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
WILD ANIMALS
Ecology
Division of Stress and Wildlife Ecology FY-1985 highlights, 11:30570 (RA;US)
WIND
Velocity
Evaluation of chemical stabilizers and windscreens for wind erosion control of uranium mill tailings, 11:30557 (RA;US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See WIND TURBINES
WIND POWER PLANTS
Control Systems
Resonance compensation of wind power plants with variable rotor speed, 11:29668 (R;SE;In Swedish)
Economics
Generic wind studies in the DEn programme, 11:29647 (RA;GB)
WIND TURBINES
See also VERTICAL AXIS TURBINES
Aerodynamics
Aerodynamic theory in the calculation of the GROWIAN rotor compared with some experimental data, 11:29659 (RA;DE)
Aerodynamic research on wind turbines at NLR, 11:29661 (RA;DE)
Aerodynamic research efforts at SERI Wind Energy Research Center at Rocky Flats, 11:29662 (RA;DE)
Implementing agreement for co-operation in the development of large scale wind energy conversion systems, 11:29653 (R;DE)
Unsteady aerodynamics applied to the horizontal axis wind turbine disk, 11:29658 (RA;DE)
Calculation Methods
Aerodynamic theory in the calculation of the GROWIAN rotor compared with some experimental data, 11:29659 (RA;DE)
Aerodynamic research on wind turbines at NLR, 11:29661 (RA;DE)
Implementing agreement for co-operation in the development of large scale wind energy conversion systems, 11:29653 (R;DE)
Unsteady aerodynamics applied to the horizontal axis wind turbine disk, 11:29658 (RA;DE)
Composite Materials
Manufacturing of blades WTS 1200 (Manufacturing of blades for the wind power plant WTS 1200), 11:29666 (R;SE;In Swedish)
Dynamic Loads
Full-scale experiments at Maglarp. Sub-project: Loads and strains. Sub-report nr 2: Valuation of measurements during October and November 1983, 11:29665 (R;SE;In Swedish)
Economics
R and D needs in wind energy - the manufacturers view, 11:29645 (RA;GB)
Environmental Effects
Measurements of TV-interference from the wind power plant at Maglarp, 11:29644 (R;SE;In Swedish)
Maintenance
Full-scale experiments at Maglarp. Final report, 11:29667 (R;SE;In Swedish)
Manufacturing
Manufacturing of blades WTS 1200 (Manufacturing of blades for the wind power plant WTS 1200), 11:29666 (R;SE;In Swedish)
Operation
Full-scale experiments at Maglarp. Final report, 11:29667 (R;SE;In Swedish)
Research Programs
Aerodynamic research efforts at SERI Wind Energy Research Center at Rocky Flats, 11:29662 (RA;DE)
Strains
Full-scale experiments at Maglarp. Sub-project: Loads and strains. Sub-report nr 2: Valuation of measurements during October and November 1983, 11:29665 (R;SE;In Swedish)
Stresses
Full-scale experiments at Maglarp. Sub-project: Loads and strains. Sub-report nr 2: Valuation of measurements during October and November 1983, 11:29665 (R;SE;In Swedish)
WINDOWS
Heat Transfer
Detailed thermal performance data on conventional and highly insulating window systems, 11:30003 (R;US)
Thermal Efficiency
Detailed thermal performance data on conventional and highly insulating window systems, 11:30003 (R;US)
WIPP
Hydrology
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
Lithology
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
Stratigraphy
Rustler Formation as a transport medium for contaminated groundwater, 11:30740 (R;US)
WOLFRAM
See TUNGSTEN
WOOD
Combustion
Wood fuels properties and principles of pricing, 11:29490 (R;FI;In Finnish)

Harvesting
Utilization of chipwood in Lapland. Prehandling, 11:29491 (R;FI;In Finnish)
Wood fuels properties and principles of pricing, 11:29490 (R;FI;In Finnish)
Materials Handling
Utilization of chipwood in Lapland. Prehandling, 11:29491 (R;FI;In Finnish)
Moisture
Wood fuels properties and principles of pricing, 11:29490 (R;FI;In Finnish)

WOOD ALCOHOL
See METHANOL

WOOD FUELS
Use of this term is limited to policy, feasibility, and socio-economic studies. For wood properties use WOOD.
Prices
Wood fuels properties and principles of pricing, 11:29490 (R;FI;In Finnish)

WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Sludges
Possibilities of using sludge for energy purposes, 11:30027 (R;FI;In Finnish)
Spent Liquors
Physical properties of spent liquor from chemical pulping processes, 11:30028 (R;FI;In Finnish)
Waste Heat Utilization
Possibilities of using sludge for energy purposes, 11:30027 (R;FI;In Finnish)

WOOD WASTES
Pyrolysis
Biomass thermochemical conversion program. 1985 annual report, 11:29486 (R;US)

X

X RADIATION
Absorption Spectra
Method and apparatus for molecular imaging using x-rays at resonance wavelengths, 11:30503 (P;US)
Chemical Radiation Effects
Structure of the σ^* radical anion in irradiated iodoacetamide, 11:30307 (J;GB)
Scattering
Method and apparatus for molecular imaging using x-rays at resonance wavelengths, 11:30503 (P;US)

XENOBIOTICS
Toxicity
Cytotoxicity from coupled redox cycling of autoxidizing xenobiotics and metals: a selective critical review and commentary on work-in-progress, 11:30727 (J;IL)

XENON
Autoionization
High resolution laser spectroscopy of Xe(5p6 to 5p5 11s-prime) at 94.2 nm, 11:30375 (BA;US)
Laser Spectroscopy
High resolution laser spectroscopy of Xe(5p6 to 5p5 11s-prime) at 94.2 nm, 11:30375 (BA;US)
Photoionization
High resolution laser spectroscopy of Xe(5p6 to 5p5 11s-prime) at 94.2 nm, 11:30375 (BA;US)
Radiolysis
Excitation of aromatic hydrocarbons in electron beam irradiated rare gas-hydrocarbon mixtures, 11:30250 (J;US)

XENON COMPOUNDS
Photoionization
Predissociation and ionization of excited KrXe observed using resonantly enhanced multiphoton ionization-photoelectron spectroscopy, 11:30293 (J;NL)

XENON IONS
Energy-Level Transitions
Identification of highly-ionized xenon spectra (Xe XXVI through Xe XXXI) excited in the plasma of the TFR Tokamak, 11:30966 (R;FR)

X-RASERS
See X-RAY LASERS

X-RAY DETECTION
Multiwire Proportional Chambers
X-ray position detection in the region of 6 μm RMS with wire proportional chambers, 11:30422 (R;US)
Position Sensitive Detectors
X-ray position detection in the region of 6 μm RMS with wire proportional chambers, 11:30422 (R;US)

X-RAY EQUIPMENT
See also X-RAY SOURCES
HgI2 Semiconductor Detectors
Mercuric iodide X-ray camera, 11:30667 (J;US)
Performance
Mercuric iodide X-ray camera, 11:30667 (J;US)
Physical Radiation Effects
Shielding analysis for the horizontal x-ray imaging system on the TFTR, 11:31001 (J;US)
Shielding
Shielding analysis for the horizontal x-ray imaging system on the TFTR, 11:31001 (J;US)

X-RAY LASERS
Model for electron cooling by radiation losses in plasmas: application to soft x-ray laser development, 11:31078 (R;US)
Gain
Possibilities for achieving x-ray lasing action by use of high-order multiphoton processes, 11:30365 (J;US)
Multi-Photon Processes
Possibilities for achieving x-ray lasing action by use of high-order multiphoton processes, 11:30365 (J;US)
Optical Pumping
Possibilities for achieving x-ray lasing action by use of high-order multiphoton processes, 11:30365 (J;US)

X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Computer-Aided Design
Soft X-ray source based on a low divergence, high repetition rate ultraviolet laser, 11:30371 (BA;US)
Design
Method and apparatus for molecular imaging using x-rays at resonance wavelengths, 11:30503 (P;US)

XUV
See EXTREME ULTRAVIOLET RADIATION

XYLENES
Chemical Reaction Kinetics
Kinetic study of reactions important in aromatic hydrocarbon combustion. Final report, August 1, 1982-July 31, 1985, 11:30234 (R;US)

Y

YANG-MILLS THEORY
Gauge theories in loop space, 11:30885 (R;GB)

YELLOW CAKE
See URANIUM OXIDES U3O8

YOLK

YTTERBIUM ALLOYS
Valence
Bulk and surface valence of $YbBe_{13}$, 11:30111 (J;CH)

YTTRIUM 88
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)

YTTRIUM 89 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Oxygen 16 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YUCCA MOUNTAIN
Hydrology
Fluid flow in a fractured rock mass (NNWSI Project), 11:30742 (R;US)
Tuff
Fluid flow in a fractured rock mass (NNWSI Project), 11:30742 (R;US)

Z

ZEA MAYS
See MAIZE
ZINC
Diffusion
Predictive geochemical modeling of contaminant concentrations in laboratory columns and in plumes migrating from uranium mill tailings waste impoundments, 11:29441 (R;US)
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
Ecological Concentration
Collection and analysis of trace metals in continental precipitation at forested sites in the Southeastern United States, 11:30524 (R;US)
Uptake
Effects of diethyldithiocarbamate and nickel chloride on glutathione and trace metal concentrations in rat liver, 11:30729 (J;NL)
ZINC 64 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
Neon 20 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
ZINC 66 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
ZINC 68 TARGET
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
ZINC BROMIDES
Thermodynamic Properties
Thermodynamic properties state equations of pure methanol and methanol-LiBr . $ZnBr_2$ solutions used in vapor absorption refrigeration and air-conditioning cycle, 11:29595 (RA;US)
ZINC COMPOUNDS
See also ZINC OXIDES
Polymerization
Raman spectroscopy of polymers of metal protoporphyrin free acids on metal electrodes, 11:30283 (J;US)
ZINC ISOTOPES
Carbon 12 Reactions
Direct measurement of reaction total cross sections for heavy ion collisions in the energy range from 30 to 300 MeV/nucleon, 11:30898 (R;FR;In French)
ZINC OXIDES
Surface Area
Surface chemistry of mineral powders. I. Rapid determination of low surface areas of mineral powders by adsorption calorimetry, 11:29312 (R;CA)
ZINC-BROMINE BATTERIES
Design
Circulating electrolyte zinc/bromine battery test program and procedures, 11:29888 (RA;US)
Performance Testing
Circulating electrolyte zinc/bromine battery test program and procedures, 11:29888 (RA;US)
Flowing electrolyte batteries test methods and results, 11:29887 (RA;US)
Overview of rechargeable battery testing in Japan, 11:29883 (RA;US)
ZINC-CHLORINE BATTERIES
Performance Testing
Overview of rechargeable battery testing in Japan, 11:29883 (RA;US)
ZIRCALOY
For unspecified Zircaloy alloys.
Corrosion
High resolution in situ ultrasonic corrosion monitor, 11:29807 (P;US)
Embrittlement
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)
Laser Welding
Welding of sule elements for nuclear reactors with solid state YAG laser using instrumentated testing equipments, 11:30075 (R;FR;In French)
Materials Testing
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)
Oxidation
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)
Reactor Materials
Assessment of safety margins in zircaloy oxidation and embrittlement criteria for ECCS acceptance, 11:29857 (R;US)
Rewetting
Analysis of zircaloy rewetting experiments and their implication for reactor fuel, 11:29838 (R;FR)
ZIRCONATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Raman Spectra
Raman spectroscopic investigation of alkali-metal hexachloro compounds of refractory metals, 11:30217 (J;US)
ZIRCONIUM
Distribution Functions
Soil nuclide distribution coefficients and their statistical distributions, 11:29430 (R;CA)
ZIRCONIUM 95
Diffusion
Cation impurity diffusion in CoO and NiO, 11:30232 (J;GB)
ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Creep
Verification tests of a high-temperature transverse creep model for Zr-2.5 wt % Nb pressure tubes, 11:30070 (R;CA)
Phase Transformations
Model for growth of beta-phase particles in zirconium-2.5 wt% niobium, 11:30119 (R;CA)

ZIRCONIUM OXIDES
Adsorption
Ion-exchange properties of activated carbon filled with hydrous Zr(IV) and Zr(IV)-P(V) oxides, 11:30174 (J;NL)
Crack Propagation
Subcritical crack growth in partially stabilized ZrO_2(MgO), 11:30125 (J;GB)
Fracture Properties
Fracture toughness of $MgCr_2O_4$-ZrO_2 composities, 11:30133 (BA;US)
Phase Diagrams
Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1985, 11:29167 (R;US)
ZIRCONIUM PHOSPHATES
Adsorption
Ion-exchange properties of activated carbon filled with hydrous Zr(IV) and Zr(IV)-P(V) oxides, 11:30174 (J;NL)
ZPPR REACTOR
Control Elements
Measurements of $^{10}B(n,He)$ reaction rates in a mockup control rod in ZPPR, 11:29777 (R;US)
ZT-40 DEVICES
Particle Losses
Invited paper: measurements and model of the coupled particle loss and fluid acceleration in the boundary layer of the zt-40m reversed-field pinch, 11:31262 (BA;US)
Plasma Acceleration
Invited paper: measurements and model of the coupled particle loss and fluid acceleration in the boundary layer of the zt-40m reversed-field pinch, 11:31262 (BA;US)
Research Programs
Status of the ZT-40M RFP experimental program, 11:31177 (J;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AA03-76SF00034	**University of California School of Engineering and Applied Science, Department of Mechanical, Aerosp**	
	11:31087	Fusion Technology 9 NO. 2. vp (Mar 1986).
AC01-78EI06320	**Energy and Environmental Analysis, Inc., Arlington, VA (USA)**	
	11:29946	DOE/EI/06320—T2
	11:29947	DOE/EI/06320—T3-Vol.1
	11:29948	DOE/EI/06320—T3-Vol.3
	11:29979	DOE/EI/06320—T3-Vol.2-Pt.1
	11:29980	DOE/EI/06320—T3-Vol.2-Pt.2

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($5.95).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for Folder PR-360-4.

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 85-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

ATMOSPHERIC SCIENCE AND POWER PRODUCTION

Darryl Randerson, Editor

Weather Service Nuclear Support Office

National Oceanic and Atmospheric Administration

U. S. Department of Commerce

Prepared for the Office of Energy Research, Office of Health and Environmental Research, U. S. Department of Energy

Published by the Office of Scientific and Technical Information, U. S. Department of Energy, 1984
850 pages, 8½ × 11 inches, hardbound

Available as DE84005177 (DOE/TIC-27601) for $29.50 from
National Technical Information Service
U. S. Department of Commerce
Springfield, Virginia 22161

DOE and DOE contractor offices with an official use for this book should contact Request Services, Technical Information Division, USDOE Office of Scientific and Technical Information, P.O. Box 62, Oak Ridge, TN 37831.

Atmospheric Science and Power Production is the third publication in a series of scientific publications sponsored by the U. S. Atomic Energy Commission and its predecessor agencies, the U. S. Energy Research and Development Administration and the U. S. Department of Energy. The first book, *Meteorology and Atomic Energy*, was published in 1955; the second, *Meteorology and Atomic Energy—1968*, in 1968. The present edition is designed to update and to expand on many of the important concepts presented previously, but it draws heavily on recent contributions made by atmospheric science to the analysis of air quality and on results originating from research conducted and completed in the 1970s. Special emphasis is placed on the contribution of atmospheric science to solving problems related to the fate of combustion products released into the atmosphere.

The framework of this book is the concept of air-quality modeling. Fundamentals are addressed first to equip the reader with basic background information, to focus on available meteorological instrumentation, and to emphasize the importance of data management procedures. Atmospheric physics and field experiments are described in detail to provide an overview of atmospheric boundary layer processes, of how air flows around obstacles, and of the mechanism of plume rise. Atmospheric chemistry and removal processes are also detailed to provide fundamental knowledge on how gases and particulate matter can be transformed while in the atmosphere and how they can be removed from the atmosphere. The book concludes with a review of the application of air-quality models to a wide variety of problems.

Like its predecessors, this book can be used by university professors and students as a textbook, by professional workers in various disciplines related to power production and air-quality analysis as a handbook, and by readers requiring a general knowledge of the factors relating to the power production industry as an introductory guide to the concepts and terminology used by atmospheric scientists, health physicists, and those responsible for regulating air quality.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

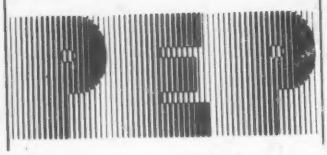
PERSONAL ENERGY PROFILE (PEP)

COMPUTER SEARCH SERVICE



PEP is a customized computer search service provided to DOE and contractor personnel on DOE/RECON (the Department's interactive on-line information retrieval system). For others, these selective dissemination-of-information services are available on commercial on-line systems. PEP automatically supplies the latest information in your field of interest by searching any of the regularly updated data bases in DOE/RECON twice a month, printing out the new bibliographic entries defined by your particular search, and mailing the update to you.

A search strategy is custom designed for each PEP subscriber so that each person's unique information needs are met. Your library and the scientific specialists at the Office of Scientific and Technical Information work with you to design a suitable search. Once the PEP service has been established, the search is automatically executed twice a month, and the results—provided in computer printout form—are mailed to you.

To obtain additional information about the specifics of subscribing to the PEP search service, or for examples of PEP search results, contact the library at your facility. If you do not have a library at your facility, contact
